Regulation Theory Robert Boyer, Yves Saillard, 2005-08-03 Robert

Boyer and Yves Sairard's *Theorie de la Regulation* introduces the Francophone public to one of the most important new currents in social science of the past half century. This long-awaited translation will help broaden its impact still further. Regulation Theory focuses on the structural features of a given model and has helped enliven the examination of core economic concepts.

A Theory of Capitalist Regulation Michel Aglietta, 2016-03-01 Michel Aglietta's path-breaking book is the first attempt at a rigorous historical theory of the whole development of US capitalism from the Civil War to the Carter presidency. A major document of the Regulation School of heterodox economics, it was received as the boldest book in its field since the classic studies of Paul Baran, Paul Sweezy, and Harry Braverman. This edition includes a substantial postface by Aglietta which situates regulation theory in the context of twenty-first century capitalism.

Theories of Adolescent Development Barbara M. Newman, Philip R. Newman, 2020-05-05 Adolescence is both universal and culturally constructed, resulting in diverse views about its defining characteristics. *Theories of Adolescent Development* brings together many theories surrounding this life stage in one comprehensive reference. It begins with an introduction to the nature of theory in the field of adolescence, including an analysis of why there are so many theories in this field. The theory chapters are grouped into three sections: biological systems, psychological systems, and societal systems. Each chapter considers a family of theories, including scope, assumptions, key concepts, contributions to the study of adolescence, approaches to measurement, applications, and a discussion of strengths and limitations of this family. A concluding chapter offers an integrative analysis, identifying five assumptions drawn from the theories that are essential guides for future research and application. Three questions provide a focus for comparison and contrast: How do the theories characterize the time and timing of adolescence? What do the theories emphasize as domains that are unfolding in movement toward maturity? Building on the perspective of Positive Youth Development, how do the theories differ in their views of developmental resources and conditions that may undermine development in adolescence? Includes biological, psychological, and sociological theories. Identifies historical roots, assumptions, key concepts, applications, measurement, strengths, and limitations of each theory. Compares and contrasts theories. Concludes with an integrated perspective across theories.

Reconstructing Urban Regime Theory Mickey Lauria, 1997 Providing a robust conceptual framework, urban regime theory has, despite its cited shortcomings, gained a dominant position in the literature on local politics. In addition to its recent use in contexts outside the United States and in comparative cross-national research, *Reconstructing Urban Regime Theory* presents a challenging argument for the need to reconceptualize urban regime's middle-level abstractions by interpreting it through the higher-level abstractions of regulationist theory. The contributors propose stronger conceptual linkages between local agents and institutions, regime transformation, and the restructuring of urban space. The blend of empirical and case study provides an excellent mix of theory and practice.

Research Companion to Planning Theory Patsy Healey, 2016-11-03 At a time of potentially radical changes in the ways in which humans interact with their environments through financial environmental and or social crises the raison d'être of spatial planning faces significant conceptual and empirical challenges This Companion presents a multidimensional collection of critical narratives of conceptual challenges for spatial planning The authors draw on various disciplinary traditions and theoretical frames to explore different ways of conceptualising spatial planning and the challenges it faces Through problematising planning itself the values which underpin planning and theory practice relations contributions make visible the limits of established planning theories and illustrate how by thinking about new issues or about issues in new ways spatial planning might be advanced both theoretically and practically There cannot be definitive answers to the conceptual challenges posed but the authors in this collection provoke critical questions and debates over important issues for spatial planning and its future A key question is not so much what planning theory is but what might planning theory do in times of uncertainty and complexity An underlying rationale is that planning theory and practice are intrinsically connected The Companion is presented in three linked parts issues which arise from an interactive understanding of the relations between planning ideas and the political institutional contexts in which such ideas are put to work key concepts in current theorising from mainly poststructuralist perspectives and what discussion on complexity may offer planning theory and practice The

highlights their impact upon the country's policymaking process. Drawing on a new dataset charting protest events from the 1980s to the present, Saori Shibata produces the first systematic study of Japan's new precarious labour movement. It details the movement's rise during Japan's post-bubble economic transformation and highlights the different and innovative forms of dissent that mark the end of the country's famously non-confrontational industrial relations. In doing so, moreover, she shows how this new pattern of industrial and social tension is reflected within the country's macroeconomic policymaking, resulting in a new policy dissensus that has consistently failed to offer policy reforms that would produce a return to economic growth. As a result, Shibata argues that the Japanese model of capitalism has therefore become increasingly disorganized.

Ecology, Capitalism and the New Agricultural Economy Gilles Allaire, Benoit Daviron, 2018-11-14. With increasing pressure on resources, the looming spectre of climate change and growing anxiety among eaters, ecology and food are at the heart of the political debates surrounding agriculture and diet. This unique contribution unravels agri-environmental issues at different spatial levels, from local to global, documenting the major shifts in agriculture from a long-term perspective. The book begins by exploring the changes in the industrialisation and socialisation of agriculture over time through the lens of institutional economics, including The French Regulation School and Conventions Theory. Building on Polanyi's Great Transformation, the chapters in this volume analyse long-term and contemporary changes in agriculture and food systems that have occurred throughout the last few centuries. Key chapters focus on the historical changes in provisioning and the social relations of production, consumption and regulation of food in different socio-political contexts. The future of agriculture is addressed through an analysis of controversial contemporary political claims and their engagement with strategies that aim to improve the sustainability of agriculture and food consumption. To shed light on ongoing changes and the future of food, this book asks important environmental and social questions and analyses how industrial agriculture has played out in various contexts. It is recommended supplementary reading for postgraduates and researchers in agricultural studies, food studies, food policy, the agri-food political economy and political and economic geography.
