Regulatory Mechanisms Of Intracellular Membrane Transport:

Regulatory Mechanisms of Intracellular Membrane Transport Sirkka Keränen, Jussi Jäntti, 2004-08-27 This book deals with the molecular mechanisms of membrane trafficking a central eukaryotic cell biological process In the post genomic era many essential molecules involved in intracellular membrane protein transport are emerging A huge task now is to compile the molecular networks that govern these processes Understanding of regulatory processes and participating molecules are likely to reveal global cellular regulatory circuits that couple membrane trafficking with other cellular functions Such cell biological features are only starting to emerge This book puts special emphasis on such mechanisms and processes The contents discusses the role of coat proteins tethering complexes small rab GTPases Sec1 family proteins and SNARE molecule phosphorylation in exocytosis endocytosis and membrane fusion In addition the role of lipids in vesicle formation and membrane fusion and some specialized cell biological denovo membrane generation processes are discussed

Erickson, Anthony Joseph Wynshaw-Boris, 2016 Epstein's Inborn Errors of Development provides essays on pathways of development and thoughtful reviews of dysmorphic syndromes for which the causative gene has been identified. This book evaluates the chemical representation of ion flux gating in excitable biomembranes and addresses the theoretical implication of liganding reactions in axonal sodium channel gating. It also strongly demonstrates the ligand interactions of crustacean axonal membrane. The opening chapters deal with the biochemical studies of the structure mechanism and differentiation of the voltage sensitive sodium channel and biochemical cycle of impedance variation in axonal membranes. The succeeding chapters examine the effect of various compounds on the phosphorylation of nerve proteins and the molecular aspects of the actions of cyclic nucleotides at synapses. These topics are followed by discussions of the acetylcholine and choline acetyltransferase as well as the polymorphism of cholinesterase in vertebrates. The closing chapters are devoted to the physical factors determining gated flux from and into sealed membrane fragments. The book can provide useful information to biologists, students and researchers.
