## **Regulatory Proteolytic Enzymes And Their Inhibitors:**

**Regulatory Proteolytic Enzymes and Their Inhibitors** Staffan Magnusson, Martin Ottesen, Bent Foltmann, 2014-05-18  
Regulatory Proteolytic Enzymes and Their Inhibitors consists of contributed papers from the 11th Meeting of the Federation of European Biochemical Societies in Copenhagen in 1977. This collection describes the role of proteases in the physiological regulation, a matter of the activation and deactivation of enzymes. The text also discusses the activation mechanism of pepsinogen and other acid protease zymogens. One paper reviews a discovery that of a separate and distinct class of precursors, the pre-secretory proteins, and then discusses other studies on preproinsulin. The text then discusses the primary structures and presumed functions of immunoglobulin precursors. Another paper continues with the work of Reich and co-workers who found that transformation of cultured fibroblasts from different species by oncogenic viruses is related to the production and release of proteases that are responsible in activating the proenzyme plasminogen into plasmin. Another paper discusses plasminogen activation as having some relationship with pathological processes. The book also reviews the plasminogen activator secretion by normal and neoplastic human tissues. The text discusses the results when primary cultures established from biopsies of normal kidneys secreted plasminogen activators in amounts over those secreted by actual malignant tissues. The book then notes the role of neutral and acid proteinases in male reproduction and the role of plasminogen activators in female ovulation. This collection can be useful for microbiologists, research biologists, molecular scientists, and students of molecular biology.

*Regulation of Fatty Acid and Glycerolipid Metabolism* Raymond Dils, Jens Knudsen, 2014-05-18 *Regulation of Fatty Acid and Glycerolipid Metabolism* is a compilation of papers presented during the 11th Meeting of the Federation of European Biochemical Societies in Copenhagen in 1977 The book deals with the regulation of enzyme activity and the turnover that results from fatty acid metabolism lipid metabolism in membranes and disturbed fatty acid metabolism One study presented in the book shows that cellular fatty acid synthetase levels are significantly decreased by different medium and long chain fatty acids in *Candida lipolytica* a kind of yeast The book also examines the serious incidence of increase in the rate of conversion of glucose to fatty acids when white adipose tissues from rats are exposed to insulin The selection addresses this increase as an important example of acute hormonal regulation of fatty acid synthesis in mammalian tissues The text also describes the enzyme adaptation to nutritional and

hormonal changes and the role of lipids in membrane fusion The book presents other studies regarding the incidence of vascular dietary and congenital factors on fatty acid metabolism in adipose tissue and liver that are conducted in rats Another study suggests that hyperinsulinemia is a key factor in the development of the obesity syndrome Microbiologists microchemists and laboratory researchers and scientists dealing with fat metabolism will appreciate this book Regulatory Proteolytic Enzymes and Their Inhibitors Staffan Magnusson,1978 **Biomedical Index to PHS-supported Research**,1995 *Temporal and Spatial Regulation of Plant Genes* Desh Pal S Verma,Robert B. Goldberg,2012-12-06 First attempts to isolate plant genes were for those genes that are abundantly expressed in a particular plant organ at a specific stage of development However many important gene products are produced in a very minute quantity and in specialized cell types Such genes can now be isolated using a variety of approaches some of which are described in this volume The rapid progress during the last decade in regeneration of a number of crop plants and the availability of molecular tools to introduce foreign genes in plants is allowing the engineering of specific traits of agricultural importance These genes must however be regulated in a spatial and temporal manner in order to have desired effects on plant development and productivity The habitat of plants necessitate adaptive responses with respect to the environmental changes Starting from germination of the seed the plant begins to sense environmental cues such as moisture light temperature and the presence of pathogens and begins to respond to them Little is known about various signal transduction pathways that lead to biochemical and morphogenetic responses in particular transition from vegetative to reproductive phase With the availability of tools to generate specific mutations via transposon tagging identification and isolation of genes affecting these processes may be facilitated Transfer of these genes into heterologous environments will allow understanding of the complex processes that control plant development *Peptide Growth Factors and Their Receptors I* Michael B. Sporn,Anita B. Roberts,2012-12-06 This two volume treatise the collected effort of more than 50 authors represents the first comprehensive survey of the chemistry and biology of the set of molecules known as peptide growth factors Although there have been many symposia on this topic and numerous publications of reviews dealing with selected subsets of growth factors the entire field has never been covered in a single treatise It is essential to do this at the present time as the number of journal articles on peptide growth factors now makes it almost impossible for anyone person to stay informed on this subject by reading the primary literature At the same time it is becoming increasingly apparent that these of universal importance in biology and medicine and that the substances are original classification of these molecules based on the laboratory setting of their discovery as growth factors lymphokines cytokines or colony stimulating factors was quite artifactual they are in fact the basis of a common language for intercellular communication As a set they affect essentially every cell in the body and in this regard they provide the basis to develop a unified science of cell biology germane to all of biomedical research This treatise is divided into four main sections After three introductory chapters its principal focus is the detailed description of each of the major
