Rozensky, Jerry J. Sweet, Steven M. Tavian, 2013-06-29 For two decades I have been responding to questions about the nature of health psychology and how it differs from medical psychology behavioral medicine and clinical psychology From the beginning I have taken the position that any application of psychological theory or practice to problems and issues of the health system is health psychology I have repeatedly used an analogy to Newell and Simon s General Problem Solver program of the late 1950s and early 1960s which had two major functional parts in addition to the executive component One was the problem solving core the procedural competence the other was the representation of the problem environment In the analogy the concepts knowledge and techniques of psychology constitute the core competence the health system in all its complexity is the problem environment A health psychologist is one whose basic competence in psychology is augmented by a working knowledge of some aspect of the health system Quite apparently there are functionally distinct aspects of health psychology to the degree that there are meaningful subdivisions in psychological competence and significantly different microenvironments within the health system I hesitate to refer to them as areas of specialization as the man who gave health psychology its formal definition Joseph Matarazzo has said that there are no specialties in psychology cited in the editors preface to this book ***Brain Injury Medicine, Third Edition*** Nathan D. Gottlieb, 2013-11-21 Much of what we know about the subject of coping is based on human behavior and cognition during times of crisis and transition Yet the alarms and minor upheavals of life comprise only a portion of those experiences that call for adaptive efforts There remains a vast array of life situations and conditions that pose continuing hardship and threat and do not promise resolution These chronic stressors issue in part from persistently difficult life circumstances roles and burdens and in part from the conversion of traumatic events into persisting adjustment challenges Indeed there is growing recognition of the fact that many traumatic experiences leave a long lasting emotional residue Whether or not coping with chronic problems differs in form emphasis or function from the ways people handle acute life events and transitions is one of the central issues taken up in these pages This volume explores the varied circumstances and experiences that give rise to chronic stress as well as the ways in which individuals adapt to and accommodate them It addresses a number of substantive and methodological questions that have been largely overlooked or sidelined in previous inquiries on the stress and coping
