Maladaptation Philip G. Madgwick, 2024-10-29 Charles Darwin presented the first scientific explanation of design through evolution by natural selection where the environment furnishes individual organisms with adaptations that help them to survive and reproduce This accessible book makes the case that natural selection can also do the exact opposite favouring traits that directly harm an organism's ability to survive and reproduce Such maladaptations contradict the received understanding of what natural selection does but become explicable with an understanding of the genetics and ecology of evolution by natural selection Drawing upon wide ranging examples from across the diversity of life the evidence for maladaptations is critically appraised to establish its possibility reality and importance to the design of living things A theory of maladaptation is developed as a corrective for a long standing error in evolutionary biology Examples of maladaptation are evaluated to identify the challenges and successes in applying the concept to organismal traits The deeper causes and consequences of maladaptation are discussed to understand its far reaching impact on the evolution of life on Earth and beyond Overall the book persuasively argues that maladaptation is a paragon of the changes to evolutionary theory that are needed to understand the population biology of natural selection Maladaptation is written to be suitable for students taking courses in evolution ecology and genetics as well as professional researchers in these fields Its accessible style will also appeal to a broader interdisciplinary audience including any inquisitive reader with a general interest in science and the natural world

George W Barlow,James Silverberg, Frank B Livingstone,2019-06-26 To most biologists sociobiology represents the concept of strict Darwinian individual selection married to an analytical application of ecological principles and brought to bear on social behavior in an unusually exciting and productive way Joining the biologists are a small number of social scientists But there are radically divergent views as to how the field should be delimited and sociobiology is one of the most widely discussed fields in biology and anthropology today The symposium on which this book is based was arranged by a biologist and an anthropologist The participants leaders in their fields ably present contrasting and responsible views on current issues This is the first collection of essays on sociobiology in which opposing views are aired It is an exciting timely book and an important historical document

Choosing Environmental Policy Winston Harrington, Richard D. Professor Morgenstern, Thomas Professor Sterner, 2010-09-30 The two distinct approaches to environmental policy include direct regulation sometimes called command and control policies and regulation by economic or market based incentives This book is the first to compare the costs and outcomes of these approaches by examining realworld applications In a unique format paired case studies from the United States and Europe contrast direct regulation on one side of the Atlantic with an incentivebased policy on the other For example Germany's direct regulation of SO₂ emissions is compared with an incentive approach in the U S Direct regulation of water pollution via the U S Clean Water Act is contrasted with Hollands incentive based fee system Additional studies contrast solutions for eliminating leaded gasoline and reducing nitrogen oxide emissions CFCs and chlorinated solvents The cases presented in *Choosing Environmental Policy* were selected to allow the sharpest most direct comparisons of direct regulation and incentive based strategies In practice environmental policy is often a mix of both types of instruments This innovative investigation will interest scholars students and policymakers who want more precise information as to what kind of blend will yield the most effective policy Are incentive instruments more efficient than regulatory ones Do regulatory policies necessarily have higher administrative costs Are incentive policies more difficult to monitor Are firms more likely to oppose market based instruments or traditional regulation These are some of the important questions the authors address often with surprising results

Facing Up to the American Dream Jennifer L. Hochschild, 1996-08-05 The ideology of the American dream the faith that an individual can attain success and virtue through strenuous effort is the very soul of the American nation. According to Jennifer Hochschild we have failed to face up to what that dream requires of our society and yet we possess no other central belief that can save the United States from chaos. In this compassionate but frightening book Hochschild attributes our national distress to the ways in which whites and African Americans have come to view their own and each other's opportunities. By examining the hopes and fears of whites and especially of blacks of various social classes Hochschild demonstrates that America's only unifying vision may soon vanish in the face of racial conflict and discontent. Hochschild combines survey data and vivid anecdote to clarify several paradoxes. Since the 1960s white Americans have seen African Americans as having better and better chances to achieve the dream. At the same time middle class blacks by now one third of the African American population have become increasingly frustrated personally and anxious about the progress of their race. Most poor blacks however cling with astonishing strength to the notion that they and their families can succeed despite their terrible perhaps worsening living conditions. Meanwhile a tiny number of the estranged poor who have completely given up on the American dream or any other faith threaten the social fabric of the black community and the very lives of their fellow blacks. Hochschild probes these patterns and gives them historical depth by comparing the experience of today's African Americans to that of white ethnic immigrants at the turn of

the century She concludes by claiming that America's only alternative to the social disaster of intensified racial conflict lies in the inclusiveness, optimism, discipline, and high-mindedness of the American dream at its best

Navigation by Judgment

Dan Honig, 2018 Foreign aid organizations collectively spend hundreds of billions of dollars annually with mixed results. Part of the problem in these endeavors lies in their execution. When should foreign aid organizations empower actors on the front lines of delivery to guide aid interventions, and when should distant headquarters lead? In *Navigation by Judgment*, Dan Honig argues that high-quality implementation of foreign aid programs often requires contextual information that cannot be seen by those in distant headquarters. Tight controls and a focus on reaching pre-set measurable targets often prevent front-line workers from using skill, local knowledge, and creativity to solve problems in ways that maximize the impact of foreign aid. Drawing on a novel database of over 14,000 discrete development projects across nine aid agencies and eight paired case studies of development projects, Honig concludes that aid agencies will often benefit from giving field agents the authority to use their own judgments to guide aid delivery. This navigation by judgment is particularly valuable when environments are unpredictable and when accomplishing an aid program's goals is hard to accurately measure. Highlighting a crucial obstacle for effective global aid, *Navigation by Judgment* shows that the management of aid projects matters for aid effectiveness.
