Rubian Media Challenge:

Media and the Empire Ruth Teer-Tomaselli, Donal McCracken, 2017-10-02 This volume on print and broadcast media in the 19th and 20th centuries highlights the pivotal role that the media played in the establishment and maintenance of imperial power. The media bolstered both the ideological and financial objectives of the empire in a myriad of overt, covert and downright scandalous ways. From jeopardising the introduction of wireless telegraphy in order to maximise the financial gains of the investors of under sea cabling to newspaper proprietors cashing in on the thrilling, wonderful and sometimes fabricated adventures of war correspondents in exotic lands, the media has had a constant background influence in the public's perception of empire. By covering diverse topics from Anthony Lejeune's radio talk show *London Letters* which supported the Allies by boosting morale and providing a link between soldiers fighting abroad and their families during both World Wars, to the complete subversion of imperial influence as in the case of the proliferation of diverse media platforms being used by migrant communities in Britain as a means to promote colonization, in reverse, the book hints at the politics, suspense and intrigue of both the print and broadcast sectors. This book was originally published as a special issue of *Critical Arts*.

Educational Digital Transformation: New Technological Challenges for Competence Development Julio Cabero Almenara, Carmen Llorente Cejudo, Antonio Palacios-Rodriguez, 2023-10-09 The COVID-19 pandemic has provided a unique opportunity to examine our understanding of the opportunities and challenges that ICTs offer to support the functioning of all aspects of education. The closure of educational institutions has forced a radical change in the practices of teachers and societies regarding the use of ICT to support teaching, learning, social relations and work in many sectors. In the training of digital skills, the instrumental mastery of ICT continues to outweigh the preparation of citizens to make constructive and safe use of technologies. After two decades of educational policies, we continue to reduce digital literacy to instrumental skills. That is, you do not learn why to use educational technologies and how or to be critical of their use. Education 4.0 seeks to develop and enhance the digital skills of students and teachers in digital teaching environments through the creation of a line of academic training programs for undergraduate, postgraduate and continuing education. This article collection welcomes contributions to improve training policies and practices in Educational Digital Transformation for educational development strategies, activities, proposals for assessment and certification of skills. *SYNTHETIC MICROBIAL RESEARCH - CHALLENGES AND PROSPECTS*

Designing for Learning in an Open World Gráinne Conole, 2012-09-21 The Internet and associated technologies have been around for almost twenty years Networked access and computer ownership are now the norm There is a plethora of technologies that can be used to support learning offering different ways in which learners can communicate with each other and their tutors and providing them with access to interactive multimedia content However these generic skills don't necessarily translate seamlessly to an academic learning context Appropriation of these technologies for academic purposes requires specific skills which means that the way in which we design and support learning opportunities needs to provide appropriate support to harness the potential of technologies More than ever before learners need supportive learning pathways to enable them to blend formal educational offerings with free resources and services This requires a rethinking of

the design process to enable teachers to take account of a blended learning context Investigating Classroom Interaction, 2009-01-01 This book adds a new perspective to existing research methodology literature on analyzing social interactions in the classroom Not only does this book introduce multiple research methodologies for analyzing classroom interactions but it also demonstrates these methodologies at work in different empirical research studies The authors of this book are all internationally well recognized for their research work on the social life of classrooms and now for the first time they provide concrete accounts of the ways in which the theories and methodologies they have chosen to guide their research work function in action These black boxes or tacit knowledge of conducting different types of analyses on classroom interaction have seldom been opened up in such a concrete way in the existing research literature This book is an edited collection of papers introducing strands of research on classroom interaction whose logic of inquiry illuminate different approaches analyses and interpretations of social interactions and discourses in contemporary classroom settings The methodological approaches discussed draw on studies of language and discourse ethnography as well as on sociological psychological and domain specific analyses In recognizing the complexity and challenges in mapping out the complex research territory focusing on classroom interactions the prime goal of the book is to build a complimentary context for discussion of the ways in which different approaches to classroom interaction are realized and how they produce different analyses because of their purpose conceptual framework and methodological choice The illumination of diverse approaches to classroom interaction and discourse is believed to demonstrate the potential and challenges each strand of research is likely to bring towards understanding the psychological social and cultural life of the classroom and how these mediate the situated practice of teaching and learning in today s schooling This book is targeted towards researchers and graduate students working within the field of social sciences education and psychology It also makes an excellent text for courses in research methodology education and related fields

Perspectives on the 'Bilingual Advantage': Challenges and Opportunities Peter Bright, Roberto Filippi, 2019-09-05 The claim that multilanguage acquisition drives advantages in executive function is currently an issue of vigorous debate in academic literature Critics argue that evidence for this advantage has been confounded by unsound or questionable methodological practices with some investigators abandoning research in this area altogether indicating either that there is no bilingual advantage or that it is impossible to capture and therefore rule out alternative explanations for group differences Over the past decade and against this backdrop theory has developed from a relatively narrow focus on inhibitory control to incorporate theory of mind rule based learning reactive and proactive control visuo spatial memory and control of verbal interference in speech comprehension Most recently authors have claimed that the process of becoming bilingual may also impact on metacognitive

abilities The fundamental issue is whether the limited capacity and goal directed selectivity of our executive system can somehow be enhanced or otherwise profit from the continuous intense competition associated with communicating in multilingual environments However although this issue has received much attention in academic literature the question of which cognitive mechanisms are most influenced by the enhanced competition associated with multilingual contexts remains unresolved Therefore rather than dismissing this important topic we advocate a more systematic approach in which the effects of multilingual experience are assessed and interpreted across well defined stages of cognitive development We encourage a broad developmentally informed approach to plotting the trajectory of interactions between multi language learning and cognitive development using a convergence of neuroimaging and behavioral methods across the whole lifespan Moreover we suggest that the current theoretical framing of the bilingual advantage is simplistic and this issue may limit attempts to identify specific mechanisms most likely to be modulated by multilingual experience For example there is a tendency in academic literature to treat executive function as an essentially unitary fronto parietal system recruited in response to all manner of cognitive demand yet performance across so called executive function tasks is highly variable and intercorrelations are sometimes low It may be the case that some higher level mechanisms of executive function remain relatively unaffected while others are more sensitive to multilingual experience and that there may be disadvantages as well as advantages which themselves may be sensitive to factors such as age In our view there is an urgent need to take a more fine grained approach to this issue so that the strength and direction of changes in diverse cognitive abilities associated with multilanguage acquisition can be better understood This book compiles work from psychologists and neuroscientists who actively research whether how and the extent to which multilanguage acquisition promotes enhanced cognition or protects against age related cognitive or neurological deterioration We hope this collection encourages future efforts to drive theoretical progress well beyond the highly simplistic issue of whether the bilingual cognitive advantage is real or spurious

Kenya Charles Hornsby, 2013-03-01 Since independence from Great Britain in 1963 Kenya has survived five decades as a functioning nation state holding regular elections its borders and political system intact and avoiding open war with its neighbours and military rule internally It has been a favoured site for Western aid trade investment and tourism and has remained a close security partner for Western governments However Kenya's successive governments have failed to achieve adequate living conditions for most of its citizens violence corruption and tribalism have been ever present and its politics have failed to transcend its history The decisions of the early years of independence and the acts of its leaders in the decades since have changed the country's path in unpredictable ways but key themes of conflicts remain over land money power economic policy national autonomy and the distribution of resources between classes and communities While the country's political institutions have remained stable the nation has changed its population increasing nearly five fold in five decades But the economic and political elite's struggle for state resources and the exploitation of ethnicity for political purposes still

Peaceful Resistance Robert M. Press, 2017-03-02 An innovative study that examines how peaceful domestic tactics by individual human rights activists and organizational activists with public support can force an authoritarian regime to make key concessions Robert Press explores the creation and impact of a culture of resistance He examines how domestic pressure can be more important than foreign pressure for political reform especially in underdeveloped authoritarian states This study of contemporary Kenya fills a gap in traditional social movement theory to show how a resistance movement actually starts Contrary to long dominant theory the book shows how the initiative for such a movement can come from activists themselves in the face of severe obstacles in society With its unique findings on the effects of individual activism and peaceful resistance this book will attract a broad audience in the study and practice of international relations comparative politics sociology interest groups peace and conflict and human rights

Scientific Modeling and Simulations Sidney Yip, Tomas Diaz Rubia, 2010-04-07 Although computational modeling and simulation of material deformation was initiated with the study of structurally simple materials and inert environments there is an increasing demand for predictive simulation of more realistic material structure and physical conditions In particular it is

recognized that applied mechanical force can plausibly alter chemical reactions inside materials or at material interfaces though the fundamental reasons for this chemomechanical coupling are studied in a material specific manner Atomistic level simulations can provide insight into the unit processes that facilitate kinetic reactions within complex materials but the typical nanosecond timescales of such simulations are in contrast to the second scale to hour scale timescales of experimentally accessible or technologically relevant timescales Further in complex materials these key unit processes are rare events due to the high energy barriers associated with those processes Examples of such rare events include unbinding between two proteins that tether biological cells to extracellular materials 1 unfolding of complex polymers stiffness and bond breaking in amorphous glass bers and gels 2 and diffusive hops of point defects within crystalline alloys 3
