Next-Generation Enterprise Security and Governance Mohiuddin Ahmed,Nour Moustafa,Abu Barkat,Paul Haskell-Dowland,2022-04-19 The Internet is making our daily lives as digital as possible and this new era is called the Internet of Everything IoE The key force behind the rapid growth of the Internet is the technological advancement of enterprises The digital world we live in is facilitated by these enterprises advances and business intelligence These enterprises need to deal with gazillions of bytes of data and in today s age of General Data Protection Regulation enterprises are required to ensure privacy and security of large scale data collections However the increased connectivity and devices used to facilitate IoE are continually creating more room for cybercriminals to find vulnerabilities in enterprise systems and flaws in their corporate governance Ensuring cybersecurity

and corporate governance for enterprises should not be an afterthought or present a huge challenge In recent times the complex diversity of cyber attacks has been skyrocketing and zero day attacks such as ransomware botnet and telecommunication attacks are happening more frequently than before New hacking strategies would easily bypass existing enterprise security and governance platforms using advanced persistent threats For example in 2020 the Toll Group firm was exploited by a new crypto attack family for violating its data privacy where an advanced ransomware technique was launched to exploit the corporation and request a huge figure of monetary ransom Even after applying rational governance hygiene cybersecurity configuration and software updates are often overlooked when they are most needed to fight cyber crime and ensure data privacy Therefore the threat landscape in the context of enterprises has become wider and far more challenging There is a clear need for collaborative work throughout the entire value chain of this network In this context this book addresses the cybersecurity and cooperate governance challenges associated with enterprises which will provide a bigger picture of the concepts intelligent techniques practices and open research directions in this area This book serves as a single source of reference for acquiring the knowledge on the technology process and people involved in next generation privacy and security

Data-Centric Security in Software Defined Networks (SDN) Marek Amanowicz, Sebastian Szwaczyk, Konrad Wrona, 2024-04-11 The book focuses on applying the data centric security DCS concept and leveraging the unique capabilities of software defined networks SDN to improve the security and resilience of corporate and government information systems used to process critical information and implement business processes

requiring special protection As organisations increasingly rely on information technology cyber threats to data and infrastructure can significantly affect their operations and adversely impact critical business processes Appropriate authentication authorisation monitoring and response measures must be implemented within the perimeter of the system to protect against adversaries However sophisticated attackers can compromise the perimeter defences and even remain in the system for a prolonged time without the owner being aware of these facts Therefore new security paradigms such as Zero Trust and DCS aim to provide defence under the assumption that the boundary protections will be breached Based on experience and lessons learned from research on the application of DCS to defence systems the authors present an approach to integrating the DCS concept with SDN They introduce a risk aware approach to routing in SDN enabling defence in depth and enhanced security for data in transit The book describes possible paths for an organisation to transition towards DCS indicating some open and challenging issues requiring further investigation To allow interested readers to conduct detailed studies and evaluate the exemplary implementation of DCS over SDN the text includes a short tutorial on using the emulation environment and links to the websites from which the software can be downloaded [CSO](#) ,2004-05 The business to business trade publication for information and physical Security professionals
