Security And Persistence Workshops In Computing:

    Security and Persistence John Rosenberg,J.Leslie Keedy,2012-12-06 During a short visit to Bremen in December 1989 John Rosenberg had several discussions with me about computer architecture Although we had previously worked together for more than a decade in Australia we had not seen each other for over a year following my move to Bremen in 1988 Meanwhile John was spending a year on study leave at the University of St Andrews in Scotland with Professor Ron Morrison and his persistent programming research group From our conversations it was quite clear that John was having a most fruitful time in St Andrews and was gaining valuable new insights into the world of persistent programming He was very keen to explore the significance of these insights for the MONADS Project which we had been jOintly directing since the early 1980s MONADS was not about persistent programming In fact it had quite different origins in the areas of software engineering and information protection In an earlier stage of the project our ideas on these themes had led us into the world of computer architecture and even hardware deSign in our attempts to provide an efficient base machine for our software ideas The most important practical result of this phase of the project had been the development of the MONADS PC a mini computer which would be better compared with say a V tv   Persistent Object Systems Antonio Albano,Ron Morrison,2012-12-06   *Fully Integrated Data Environments* Malcolm P. Atkinson,Ray Welland,2012-12-06 Research into Fully Integrated Data Environments FIDE has the goal of substantially improving the quality of application systems while reducing the cost of building and maintaining them Application systems invariably involve the long term storage of data over months or years Much unnecessary complexity obstructs the construction of these systems when conventional databases file systems operating systems communication systems and programming languages are used This complexity limits the sophistication of the systems that can be built generates operational and usability problems and deleteriously impacts both reliability and performance This book reports on the work of researchers in the Esprit FIDE projects to design and develop a new integrated environment to support the construction and operation of such persistent application systems It reports on the principles they employed to design it the prototypes they built to test it and their experience using it   **Cryptographic Security Architecture** Peter Gutmann,2007-05-08 A cryptographic security architecture is the collection of hardware and software that protects and controls the use of encryption keys and similar cryptovariables It is the foundation for enforcing computer security policies and controls and preempting system misuse This book provides a comprehensive design for a portable flexible high security cryptographic architecture with particular emphasis on incorporating rigorous security models and practices Cryptographic Security Architecture unveils an alternative means of building a trustworthy system based on concepts from established software engineering principles and cognitive psychology Its novel security kernel design implements a reference monitor that controls access to security relevant objects and attributes based on a configurable security policy Topics and features Builds a concise architectural design that can be easily extended in the future Develops

an application specific security kernel that enforces a fully customizable rule based security policy Presents a new verification technique that allows verification from the high level specification down to the running code Describes effective security assurance in random number generation and the pitfalls associated therewith Examines the generation and protection of cryptovariables as well as application of the architectural design to cryptographic hardware The work provides an in depth presentation of a flexible platform independent cryptographic security architecture suited to software hardware and hybrid implementations Security design practitioners professionals researchers and advanced students will find the work an essential resource   **Computer Security** Matthew A. Bishop,Matt Bishop,2003 The importance of computer security has increased dramatically during the past few years Bishop provides a monumental reference for the theory and practice of computer security Comprehensive in scope this book covers applied and practical elements theory and the reasons for the design of applications and security techniques   *6th Refinement Workshop* David Till,2012-12-06 The Sixth Refinement Workshop took place at City University in London from 5th to 7th January 1994 The present volume includes all of the papers which were submitted and accepted for presentation together with two papers by invited speakers The workshops in the series have generally occurred at one year intervals but in this last case a two year period had elapsed These workshops have established themselves as an important event in the calendar for all those who are interested in progress in the underlying theory of refinement and in the take up by industry of the methods supported by that theory One of the proposed themes of the sixth workshop was the reporting of successful adoption in industry of rigorous software development methods The programme committee was perhaps slightly disappointed by the response from industry to the call in this respect However the recent period could be characterised as one of consolidation when those companies which have made the decision that formal development methods are important to their business have been adopting them where appropriate and finding them to be worthwhile On the other hand the difficult economic climate which exists in most parts of the developed world is perhaps not the context within which companies still dubious about the benefits are goil g to opt for making major changes in their working practices   **Computer Security. ESORICS 2024 International Workshops** Joaquin Garcia-Alfaro,Ken Barker,Guillermo Navarro-Arribas,Cristina Pérez-Solà,Sergi Delgado-Segura,Sokratis Katsikas,Frédéric Cuppens,Costas Lambrinoudakis,Nora Cuppens-Boulahia,Marek Pawlicki,Michał Choraś,2025-04-01 This two volume set LNCS 15263 and LNCS 15264 constitutes the refereed proceedings of eleven International Workshops which were held in conjunction with the 29th European Symposium on Research in Computer Security ESORICS 2024 held in Bydgoszcz Poland during September 16 20 2024 The papers included in these proceedings stem from the following workshops 19th International Workshop on Data Privacy Management DPM 2024 which accepted 7 full papers and 6 short papers out of 24 submissions 8th International Workshop on Cryptocurrencies and Blockchain Technology CBT 2024 which accepted 9 full papers out of 17 submissions 10th Workshop on the Security of Industrial Control Systems and of Cyber Physical Systems CyberICPS 2024 which accepted

9 full papers out of 17 submissions International Workshop on Security and Artificial Intelligence SECAI 2024 which accepted 10 full papers and 5 short papers out of 42 submissions Workshop on Computational Methods for Emerging Problems in Disinformation Analysis DisA 2024 which accepted 4 full papers out of 8 submissions 5th International Workshop on Cyber Physical Security for Critical Infrastructures Protection CPS4CIP 2024 which accepted 4 full papers out of 9 submissions 3rd International Workshop on System Security Assurance SecAssure 2024 which accepted 8 full papers out of 14 submissions   **Women into Computing** Gillian Lovegrove,Barbara Segal,2013-06-29 This book contains the majority of the papers presented at the 1990 Women into Computing Conference together with selected papers from the 1989 and 1988 Conferences In 1988 the main theme running through the Conference was that of dismay at the low number of women taking computing courses or following computing careers The 1989 Conference was concerned solely with workshops for schoolgirls and the 1990 Conference concentrated on strategies rather than an assessment of the situation As editors we set as our task to make a selection of papers presenting the overall picture in 1990 We found that many of the issues discussed in 1988 are still a cause for concern in 1990 but that strategies to improve the situation are many and varied Section I contains speeches from the invited speakers and needs little introduction Section II contains papers covering so me attitudes and issues of concern ranging from the specific Gill Russell on child care and Laurie Keller on hacker mentality through to broader aspects of gender inequality the papers of Flis Henwood Margaret Bruce and Alison Adam and Lyn Bryant Susan Jones takes a look at the reasons why we should want to see more women in computing whilst Gillian Lovegrove and Wendy Hall present a more general paper on school and higher education   **Z User Workshop, London 1992** J.P. Bowen,J.E. Nicholls,2013-03-09 The Z notation has been developed at the Programming Research Group at the Oxford University Computing Laboratory and elsewhere for over a decade It is now used by industry as part of the software and hardware development process in both Europe and the USA It is currently undergoing BSI standardisation in the UK and has been proposed for ISO standardisation internationally In recent years researchers have begun to focus increasingly on the development of techniques and tools to encourage the wider application of Z and other formal methods and notations This volume contains papers from the Seventh Annual Z User Meeting held in London in December 1992 In contrast to previous years the meeting concentrated specifically on industrial applications of Z and a high proportion of the participants came from an industrial background The theme is well represented by the four invited papers Three of these discuss ways in which formal methods are being introduced and the fourth presents an international survey of industrial applications It also provides a reminder of the improvements which are needed to make these methods an accepted part of software development In addition the volume contains several submitted papers on the industrial use of Z two of which discuss the key area of safety critical applications There are also a number of papers related to the recently completed ZIP project The papers cover all the main areas of the project including methods tools and the development of a Z Standard the first publicly available version of which was made available at the

meeting Finally the volume contains a select Z bibliography and section on how to access information on Z through comp specification z the international computer based USENET newsgroup Z User Workshop London 1992 provides an important overview of current research into industrial applications of Z and will provide invaluable reading for researchers postgraduate students andalso potential industrial users of Z **IV Higher Order Workshop, Banff 1990** Graham Birtwistle,2012-12-06 It is many years since Landin Burge and others showed us how to apply higher order techniques and thus laid some foundations for modern functional programming The advantage of higher order descriptions that they can be very succinct and clear has been percolating through ever since Current research topics range from the design implementation and use of higher order proof assistants and theorem provers through program specification and verification and programming language design to its applications in hardware description and verification The papers in this book represent the presentations made at a workshop held at Banff Canada September 10 14 1990 and organised by the Computer Science Department of the University of Calgary The workshop gathered together researchers interested in applying higher order techniques to a range of problems The workshop format had a few but fairly long presentations per day This left ample time for healthy discussion and argument many of which continued on into the small hours With so much to choose from the program had to be selective This year s workshop was divided into five parts 1 Expressing and reasoning about concurrency Warren Burton and Ken Jackson John Hughes and Faron Moller 2 Reasoning about synchronous circuits Geraint Jones and Mary Sheeran with a bonus on the fast Fourier transform from Geraint 3 Reasoning about asynchronous circuits Albert Camilleri Jo Ebergen and Martin Rem 4 Categorical concepts for programming languages Robin Cockett Barry Jay and Andy Pitts Advances in Persistent Object Systems Ron Morrison,Mick Jordan,Malcolm Atkinson,1999-01-22 Proceedings of the biennial International Workshops on Persistent Object Systems 5th Refinement Workshop Cliff B. Jones,Roger C. Shaw,Tim Denvir,2013-03-14 Refinement is the term used to describe systematic and formal methods of specifying hard and software and transforming the specifications into designs and implementations The value of formal methods in producing reliable hard and software is widely appreciated by academics and workers in industry despite the fact that certain research areas such as the application to industrial scale problems are still in their infancy This volume contains the papers presented at the 5th Refinement Workshop held in London 8 10 January 1992 Its theme was the theory and practice of software specifications which is the transformation of formal software specifications into more correct specifications designs and codes This has been an important area of research for the last 5 years and the workshop addressed specific issues and problems related to it Among the topics discussed in this volume are the role of refinement in software development parallel designs and implementations methods and tools for verification of critical properties refinement and confidentiality concurrent processes as objects the compliance of Ada programs with Z specifications and a tactic driven refinement tool This is the latest refinement workshop proceedings to be published in the Workshops in Computing series the 3rd and 4th

workshops having appeared in 1990 and 1991 respectively It will be of interest to academic and industrial researchers postgraduate students and research oriented developers in the computer industry   First International Workshop on Larch Ursula Martin,Jeannette M. Wing,2013-11-11 The papers in this volume were presented at the First International Workshop on Larch held at MIT Endicott House near Boston on 13 15 July 1992 Larch is a family of formal specification languages and tools and this workshop was a forum for those who have designed the Larch languages built tool support for them particularly the Larch Prover and used them to specify and reason about software and hardware systems The Larch Project started in 1980 led by John Guttag at MIT and James Horning then at Xerox Palo Alto Research Center and now at Digital Equipment Corporation Systems Research Center DEC SRC Major applications have included VLSI circuit synthesis medical device communications compiler development and concurrent systems based on Lamport s TLA as well as several applications to classical theorem proving and algebraic specification Larch supports a two tiered approach to specifying software and hardware modules One tier of a specification is wrllen in the Larch Shared Language LSL An LSL specification describes mathematical abstractions such as sets relations and algebras its semantics is defined in terms of first order theories The second tier is written in a Larch interface language one designed for a specific programming language An interface specification describes the effects of individual modules e g state changes resource allocation and exceptions its semantics is defined in terms of first order predicates over two states where state is defined in terms of the programming language s notion of state Thus LSL is programming language independent a Larch interface language is programming language dependent   *Z User Workshop, Oxford 1990* J.E. Nicholls,2013-11-11   *Persistent Object Systems* Malcolm Atkinson,David Maier,Veronique Benzaken,2012-12-06 The Sixth International Workshop on Persistent Object Systems was held at Les Mazets des Roches near Tarascon Provence in southern France from the fifth to the ninth of September 1994 The attractive context and autumn warmth greeted the 53 participants from 12 countries spread over five continents Persistent object systems continue to grow in importance Almost all significant uses of computers to support human endeavours depend on long lived and large scale systems As expectations and ambitions rise so the sophistication of the systems we attempt to build also rises The quality and integrity of the systems and their feasibility for supporting large groups of co operating people depends on their technical founda tion Persistent object systems are being developed which provide a more robust and yet simpler foundation for these persistent applications The workshop followed the tradition of the previous workshops in the series focusing on the design implementation and use of persistent object systems in particular and persistent systems in general There were clear signs that this line of research is maturing as engineering issues were discussed with the aid of evidence from operational systems The work presented covered the complete range of database facilities transactions concurrency distribution integrity and schema modifica tion There were examples of very large scale use one involving tens of terabytes of data Language issues particularly the provision of reflection continued to be important   Database

<u>Programming Languages (DBPL-4)</u> Catriel Beeri,Atsushi Ohori,Dennis Shasha,2013-06-29 The Fourth International Workshop on Database Programming Languages Object Models and Languages DBPL 4 took place in Manhattan New York City 30 August 1 September 1993 The areas of interest and the format of DBPL 4 focused on the integration of programming languages object models type systems and database systems As in the previous DBPL workshops the setting was informal allowing the participants to actively discuss and argue about the ideas presented in the talks The comments and remarks made by the participants during and after the presentations were taken into account in the preparation of the final versions of the papers The result we believe is a set of excellent papers The DBPL sequence is closely related to the sequence of International Workshops on Persistent Object Systems POS first started in 1985 While the DBPL workshops focus on language and model issues the POS workshops have focused on implementation issues thus the two sequences complement each other Many researchers participate in both workshop series The eight sessions of the technical program of DBPL 4 were as follows 1 Bulk types and their query languages two sessions 2 Object models and languages 3 Data types with order 4 Mechanisms to support persistence reflection and extensibility 5 Query optimization and integrity constraints 6 Logic based models 7 Implementation and performance issues   *Functional Programming, Glasgow 1994* Kevin Hammond,David N. Turner,Patrick M. Sansom,2013-03-09 This is the proceedings of the seventh annual workshop held by the Glasgow Functional Programming Group The purpose of the workshop is to provide a focus for new research to foster research contacts with other functional language researchers and to provide a platform for research students to develop their presentation skills As in previous years we spent three days closeted together in a pleasant seaside town isolated from normal work commitments We were joined by colleagues from other universities both UK and abroad and from industry Workshop participants presented a short talk about their current research work and produced a paper which appeared in a draft proceedings These papers were then reviewed and revised in the light of discussions at the workshop and the referees comments A selection of those revised papers the majority of those presented at the workshop appears here in the published proceedings The papers themselves cover a wide span from theoretical work on algebras and bisimilarity to experience with a real world medical applica tion Unsurprisingly given Glasgow s track record there is a strong emphasis on compilation techniques and optimisations and there are also several papers on concurrency and parallelism   <u>Functional Programming, Glasgow 1993</u> John T. O'Donnell,Kevin Hammond,2012-12-06 The Functional Programming Group at the University of Glasgow was started in 1986 by John Hughes and Mary Sheeran Since then it has grown in size and strength becoming one of the largest computing science research groups at Glasgow and earning an international reputation The first Glasgow Functional Programming Workshop was organised in the summer of 1988 Its purpose was threefold to provide a snapshot of all the research going on within the group to share research ideas between Glaswegians and colleagues in the U K and abroad and to introduce research students to the art of writing and presenting papers at a semi formal but still local and

friendly conference The success of the first workshop has led to an annual series Rothesay 1988 Fraserburgh 1989 Ullapool 1990 Portree 1991 Ayr 1992 and the workshop reported in these proceedings Ayr 1993 Most participants wrote a paper that appeared in the draft proceedings distributed at the workshop and each draft paper was presented by one of the authors The papers were all refereed by several other participants at the workshop both internal and external and the programme committee selected papers for these proceedings Most papers have been revised twice based firstly on feedback at the workshop and secondly using the referee reports   *Neural Computation and Psychology* Leslie S. Smith,Peter J.B. Hancock,2013-06-29 The papers that appear in this volume are refereed versions of presenta tions made at the third Neural Computation and Psychology Workshop held at Stirling University Scotland from 31 August to 2 September 1994 The aim of this series of conferences has been to explore the interface between Neural Computing and Psychology this has been a fruitful area for many researchers for a number of reasons The development ofNeural Computation has supplied tools to researchers in Cognitive Neuroscience allowing them to look at possible mechanisms for implementing theories which would otherwise remain black box techniques These theories may be high level theories concerned with interaction between a number of brain areas or low level describing the way in which smaller local groups of neurons behave Neural Computation techniques have allowed computer scientists to implement systems which are based on how real brains appear to function providing effective pattern recognition systems We can thus mount a two pronged attack on perception The papers here come from both the Cognitive Psychology viewpoint and from the Computer Science viewpoint it is a mark of the growing maturity of the interface between the two subjects that they can under stand each other s papers and the level of discussion at the workshop itself showed how important each camp considers the other to be The papers here are divided into four sections reflecting the primary areas of the material   Algebra of Communicating Processes Alban Ponse,Christiaan Verhoef,Sebastiaan F.M.van Vlijmen,2012-12-06 ACP the Algebra of Communicating Processes is an algebraic approach to the study of concurrent processes initiated by Jan Bergstra and Jan Will em Klop in the early eighties These proceedings comprise the contributions to ACP94 the first workshop devoted to ACP The work shop was held at Utrecht University 16 17 May 1994 These proceedings are meant to provide an overview of current research in the area of ACP They contain fifteen contributions The first one is a classical paper on ACP by J A Bergstra and J W Klop The Algebra of Recursively Defined Processes and the Algebra of Regular Processes Report IW 235 83 Mathematical Centre Amsterdam 1983 It serves as an introduction to the remainder of the proceedings and indeed as a general introduction to ACP An extended abstract of this paper is published under the same title in the ICALP 84 proceedings Of the re maining contributions three were submitted by the invited speakers and the others were selected by the programme committee As for the presentations Jos Baeten Rob van Glabbeek Jan Friso Groote and Frits Vaandrager were each invited to deliver a lecture A paper relating to Frits Vaandrager s lecture has already been submitted for publication elsewhere and is not therefore included in these pro ceedings Gabriel

Ciobanu one of our guests gave an impression of his work in an extra lecture Furthermore ten presentations were given on the basis of selected papers
