

Top Considerations for Glass Selection & Specification

In addition to the important considerations of aesthetics and energy related performance characteristics of glass products, it is critical that attention be given to other design considerations. This should be done by the appropriate design professional as early in the design cycle as possible.

Surface Orientation

When darker tinted glasses are specified, it is critical that the glass be fabricated and glazed with consistent surface orientation.

Color Shift

Color shift can occur when some coatings and tints are incorporated into the glass design with other materials.

Wind & Snow Loads

Specify the appropriate glass thickness and type (annealed, heat strengthened, tempered) to resist wind and/or snow loads.

Safety

Appropriate safety glazing materials, such as tempered or laminated glass, must be specified where required by code or application.

Thermal Stress

Strengthened glass (heat strengthened or tempered) may be required to resist thermally induced stresses. These stresses are caused by a number of design factors.

Aesthetics & Mock-Up

Many glass products can be used with other materials for improved performance and aesthetics.

Energy & Sustainable Design

For more than 70 years, Vitro has been a leader in the advancement of glass technology designed to enhance comfort and save energy.
