Sedimentary Basins of Continental Margins and Cratons M.H.P. Bott, 2013-10-22 Developments in Geotectonics 12

Sedimentary Basins of Continental Margins and Cratons focuses on the formation movements characteristics and evolution of sedimentary basins of continental margins and cratons The selection first offers information on mechanisms of basin subsidence and rheology of the lithosphere Discussions focus on hypotheses of basin subsidence mechanism testing the hypotheses elastic properties and flexural rigidity of the lithosphere and rheology of young continental margins The text then elaborates on flexure of the lithosphere and continental margin basins and thermal and mechanical evolution of the Michigan basin The book ponders on the formation of sedimentary basins of graben type by extension of the continental crust and major synchronous events in continental shelves Topics include inception of shelf development mid cretaceous change taphrogenic subsidence and energy budget of wedge subsidence mechanism The manuscript also examines development of graben associated with the initial ruptures of the Atlantic Ocean and observations on the processes of sedimentary basin formation at the margins of Southern Africa The selection is a dependable reference for readers interested in the study of continental margins *Collected Reprints* Atlantic Oceanographic and Meteorological Laboratories, 1978 **Collected Reprints**, 1978 **Journal of Sedimentary Petrology**, 1977 *The Large-wavelength Deformations of the Lithosphere* A. Whitten, 2012-12-02 Recent Crustal Movements 1977 is a compilation of the proceedings of the Sixth International Symposium on Recent Crustal Movements This volume is comprised of 50 papers and 38 abstracts in addition to a special report about the RCM Symposium and the report of the Fennoscandian Subcommission This volume is subdivided into eight parts The first part presents the opening remarks at the symposium and the special report of the Fennoscandian Subcommission of the Commission on Recent Crustal Movements Locations included in this report are the Estonian Soviet Socialist Republic Finland Sweden Denmark and Norway Part two is about crustal deformation using extra terrestrial geodesy Part three explores the measurement of strain tilt and gravity The observed vertical crustal deformation is the focus of the fourth part The second half of this volume focuses on geologic studies of Holocene deformation observed horizontal crustal deformation seismology and finally experimental and theoretical models of interferometric methods for the measurement of distance in the study of recent crustal movements Processes of Continental Rifting P. Morgan, B.H. Baker, 2013-10-22 Selected papers from the Lunar and Planetary Institute Topical Conference St Helena CA USA 3 5 Dec 1981 **Continental Rifts: Evolution, Structure, Tectonics** K.H. Olsen, 1995-11-24 This multi author book has been prepared by an international group of geoscientists that have been active in rift research since the late 1960s In 1984 an informal grass roots study group was initiated to compare individual research results and to explore in greater depth the apparent differences and similarities in the interpretations from various rift systems The group became known as the CREST

working group an acronym of Continental Rifts Evolution Structure and Tectonics which not surprisingly became the title of this book Continental Rifts Evolution Structure Tectonics presents an overview of the present state of understanding and knowledge of the processes of continental rifting from a multidisciplinary lithospheric scale perspective The chapters have been structured on each rift system in approximately the same synoptic sequence so as to facilitate comparisons of rifts by the reader The book complements its predecessors by presenting a more unified picture It succeeds in presenting the status of a representative majority of the continental rift systems that have been at the forefront of recent research For students and experienced researchers alike this book will be of significant value in assessing the current state of knowledge and in serving as a framework for future research

Arvind Johnson, 2012-12-02 Styles of Folding Mechanics and Mechanisms of Folding of Natural Elastic Materials Developments in Geotectonics 11 provides an introduction to theoretical underpinnings of folds in rocks The book begins with a review of studies which have been most significant to the development of current understanding of folds It then turns to the development of a theory of folding of multilayered elastic materials It presents the derivation of linearized equations that describe the incremental deformation of materials with memory these equations are then used to solve for wavelengths of sinusoidal folds in single layers and multilayers A theory of kink folding in elastic multilayers is introduced based on the mechanism of plastic yielding between layers The chapters also include analyses of folds in the Carmel Formation at Arches National Monument in Utah asymmetric folds in interbedded cherts and shales of the Franciscan Complex and some folds in Tertiary rocks in the Coast Ranges of California Finally the most important mechanisms of folding recognized thus far are summarized for multilayered materials with a wide range of properties **Recent Crustal Movements, 1982 P.**
