Seeds Of Change Five Plants That Transformed Mankind:

Seeds of Change Henry Hobhouse,1987 In the manner of Barbara Tuchman and Paul Johnson a superior popular account of how five plants quinine sugar tea cotton and the potato have determined the course of history Illustrated

Seeds of Change Henry Hobhouse,2005 **Seeds of change** Henry Hobhouse,1985 **Plants that Changed Our Lives** Martyn Baguley,2021-04-14 In his book *Seeds of Change* Henry Hobhouse relates stories about Five plants that transformed mankind namely quinine sugar tea cotton and the potato The book came to my mind in 2017 when I was asked to write a monthly series of articles about plants for several magazines The more I read and thought about the subject the more intrigued I became about the influence that plants have been on mankind s history I thought that Hobhouse s book would be a good source of information about five plants but it presented a challenge Magazine editors mostly want feature articles to be limited to 800 to 1000 words Hobhouse wrote some 22000 words about each plant Incorporating his fascinating facts into maximum 1000 word articles would be a major pr cising challenge Furthermore I never rely on one source of information for my articles so the more my researches discovered about the plants the greater the challenge would be And that wasn t the entire problem The prospect was for the series of articles to run for more than five months in fact it continued for two years What other plants have significantly influenced our history Where would all the information come from It was an interesting and rewarding challenge for someone who is fascinated by plants The more research I did the more I came to think that there is a story to tell about every plant That s an exaggeration but there are fascinating stories to tell about the way many plants have influenced the lives of our ancestors from the earliest hominids and continue to influence our lives today The book *Plants that changed our lives* is a compilation of articles about twenty one plants distilled from information gleaned from many sources and first published in magazines in the United Kingdom and Republic of Ireland between 2017 and 2019 I hope that my enthusiasm for the subject shines through my scribbles and they will enthuse at least some of my readers Maybe you will be one of them , **Toni Morrison and the Natural World** Anissa Janine Wardi,2021-06-28 Winner of the Toni Morrison Society Book Prize for Best Single Authored Book 2019 2022 Critics have routinely excluded African American literature from ecocritical inquiry despite the fact that the literary tradition has from its inception proved to be steeped in environmental concerns that address elements of the natural world and relate nature to the transatlantic slave trade plantation labor and nationhood Toni Morrison s work is no exception *Toni Morrison and the Natural World* An Ecology of Color is the first full length ecocritical investigation of the Nobel Laureate s novels and brings to the fore an unequalled engagement between race and nature Morrison s ecological consciousness holds that human geographies are enmeshed with nonhuman nature It follows then that ecology the branch of biology that studies how people relate to each other and their environment is an apt framework for this book The interrelationships and interactions between individuals and community and between organisms and the biosphere are central to this analysis They highlight that the human and nonhuman are part

of a larger ecosystem of interfacing and transformations Toni Morrison and the Natural World is organized by color examining soil brown in *The Bluest Eye* and Paradise plant life green in *Song of Solomon* Beloved and Home bodies of water blue in *Tar Baby* and Love and fire orange in *Sula* and *God Help the Child* By providing a racially inflected reading of nature Toni Morrison and the Natural World makes an important contribution to the field of environmental studies and provides a landmark for Morrison scholarship

Ethnobotany in the New Europe Manuel Pardo-de-Santayana, Andrea Pieroni, Rajindra K. Puri, 2010-06-01 The study of European wild food plants and herbal medicines is an old discipline that has been invigorated by a new generation of researchers pursuing ethnobotanical studies in fresh contexts Modern botanical and medical science itself was built on studies of Medieval Europeans use of food plants and medicinal herbs In spite of monumental changes introduced in the Age of Discovery and Mercantile Capitalism some communities often of immigrants in foreign lands continue to hold on to old recipes and traditions while others have adopted and enculturated exotic plants and remedies into their diets and pharmacopoeia in new and creative ways Now in the 21st century in the age of the European Union and Globalization European folk botany is once again dynamically responding to changing cultural economic and political contexts The authors and studies presented in this book reflect work being conducted across Europe s many regions They tell the story of the on going evolution of human plant relations in one of the most bioculturally dynamic places on the planet and explore new approaches that link the re evaluation of plant based cultural heritage with the conservation and use of biocultural diversity

Humans Versus Nature Daniel R. Headrick, 2020 Since the appearance of Homo sapiens on the planet hundreds of thousands of years ago human beings have sought to exploit their environments extracting as many resources as their technological ingenuity has allowed As technologies have advanced in recent centuries that impulse has remained largely unchecked exponentially accelerating the human impact on the environment *Humans versus Nature* tells a history of the global environment from the Stone Age to the present emphasizing the adversarial relationship between the human and natural worlds Nature is cast as an active protagonist rather than a mere backdrop or victim of human malfeasance Daniel R Headrick shows how environmental changes epidemics climate shocks and volcanic eruptions have molded human societies and cultures sometimes overwhelming them At the same time he traces the history of anthropogenic changes in the environment species extinctions global warming deforestation and resource depletion back to the age of hunters and gatherers and the first farmers and herders He shows how human interventions such as irrigation systems over fishing and the Industrial Revolution have in turn harmed the very societies that initiated them Throughout Headrick examines how human driven environmental changes are interwoven with larger global systems dramatically reshaping the complex relationship between people and the natural world In doing so he roots the current environmental crisis in the deep past
