Seismic Velocity Analysis And The Convolutional Model:

Seismic Velocity Analysis and the Convolutional Model Enders A. Robinson, 1983-01-01 **Seismic Velocity Analysis and the Convolutional Model** Enders Robinson, 1983 *Seismic Hydrocarbon Exploration* Hamid N. Alsadi, 2016-08-26
This book presents the essential principles and applications of seismic oil exploration techniques. It concisely covers all stages in exploration activities: data field acquisition, data processing and interpretation, supplementing the main text with a wealth of 350 illustrations and figures. The book concentrates on the physics of the applied principles, avoiding intricate mathematical treatment and lengthy theoretical reasoning. A further prominent feature is the inclusion of a separate chapter on 3D surveying techniques and another equally important chapter on seismic digital signals and the aliasing problem, which is presented in an accessible form. The book is designed to meet the needs of both the academic and industrial worlds. University students and employees of oil exploration companies alike will find the book to be a valuable resource.

Exploration Geophysics Mamdouh R. Gadallah, Ray Fisher, 2008-10-20. Many text books have been written on the subject Exploration Geophysics. The majority of these texts focus on the theory and the mathematical treatment of the subject matter but lack treatment of practical aspects of geophysical exploration. This text is written in simple English to explain the physical meaning of jargon or terms used in the industry. It describes how seismic data is acquired in 2 D and 3 D, how they are processed to convert the raw data to seismic vertical and horizontal cross sections that are geologically meaningful, and how these and other data are interpreted to delineate a prospect. Workshops are included after each chapter and are designed to reinforce learning of the concepts presented. Key Features: Written in simple, easy-to-understand language. Heavily illustrated to aid in understanding the text. End of chapter Key words and workshop. The text includes several appendices and answers for the selected workshop problems. Digital Imaging and Deconvolution Enders A. Robinson, Sven Treitel, 2008. Digital Imaging and Deconvolution: The ABCs of Seismic Exploration and Processing. SEG Geophysical References Series No 15 covers the basic ideas and methods used in seismic processing, concentrating on the fundamentals of seismic imaging and deconvolution. Most chapters are followed by problem sets. Some exercises supplement textual material; others are meant to stimulate classroom discussions. Text and exercises deal mostly with simple examples that can be solved with nothing more than pencil and paper. The book covers wave motion, digital imaging, digital filtering, various visualization aspects of the seismic reflection method, sampling theory, the frequency spectrum, synthetic seismograms, wavelets and wavelet processing, deconvolution, the need for continuing interaction between the seismic interpreter and the computer, seismic attributes, phase rotation and seismic attenuation. The last of the 15 chapters provides a detailed mathematical overview. Digital Imaging and Deconvolution nominated for the Association of Earth Science Editors award for best geoscience publication of 2008. 2009 will interest professional geophysicists, graduate students and upper level undergraduates in geophysics. The book also will be helpful to scientists and engineers in other disciplines who use digital

signal processing to analyze and image wave motion data in remote detection applications The methods described are important in optical imaging video imaging medical and biological imaging acoustical analysis radar and sonar Practical Seismic Data Analysis Hua-Wei Zhou,2014-01-23 This modern introduction to seismic data processing in both exploration and global geophysics demonstrates practical applications through real data and tutorial examples The underlying physics and mathematics of the various seismic analysis methods are presented giving students an appreciation of their limitations and potential for creating models of the sub surface Designed for a one semester course this textbook discusses key techniques within the context of the world s ever increasing need for petroleum and mineral resources equipping upper undergraduate and graduate students with the tools they need for a career in industry Examples presented throughout the text allow students to compare different methods and can be demonstrated using the instructor s software of choice Exercises at the end of sections enable students to check their understanding and put the theory into practice and are complemented by solutions for instructors and additional case study examples online to complete the learning package

Maximum-Likelihood Deconvolution Jerry M. Mendel,2012-12-06 Convolution is the most important operation that describes the behavior of a linear time invariant dynamical system Deconvolution is the unraveling of convolution It is the inverse problem of generating the system s input from knowledge about the system s output and dynamics Deconvolution requires a careful balancing of bandwidth and signal to noise ratio effects Maximum likelihood deconvolution MLD is a design procedure that handles both effects It draws upon ideas from Maximum Likelihood when unknown parameters are random It leads to linear and nonlinear signal processors that provide high resolution estimates of a system s input All aspects of MLD are described from first principles in this book The purpose of this volume is to explain MLD as simply as possible To do this the entire theory of MLD is presented in terms of a convolutional signal generating model and some relatively simple ideas from optimization theory Earlier approaches to MLD which are couched in the language of state variable models and estimation theory are unnecessary to understand the essence of MLD MLD is a model based signal processing procedure because it is based on a signal model namely the convolutional model The book focuses on three aspects of MLD 1 specification of a probability model for the system s measured output 2 determination of an appropriate likelihood function and 3 maximization of that likelihood function Many practical algorithms are obtained Computational aspects of MLD are described in great detail Extensive simulations are provided including real data applications **Aspects of Seismic Reflection Data Processing** R. Marschall,2012-12-06 **Technologies for Improving the Evaluation and Repair of Concrete Bridge Decks** ,1998 **Frontiers Of Remote Sensing Information Processing** Chi Hau Chen,2003-07-07 Written by leaders in the field of remote sensing information processing this book covers the frontiers of remote sensors especially with effective algorithms for signal image processing and pattern recognition with remote sensing data Sensor and data fusion issues SAR images hyperspectral images and related special topics are also examined

Techniques making use of neural networks wavelet transforms and knowledge based systems are emphasized A special set of three chapters is devoted to seismic analysis and discrimination In summary the book provides an authoritative treatment of major topics in remote sensing information processing and defines new frontiers for these areas **Applied Geophysics** W. M. Telford, L. P. Geldart, R. E. Sheriff, 1990-10-26 This is the completely revised and updated version of the popular and highly regarded textbook Applied Geophysics It describes the physical methods involved in exploration for hydrocarbons and minerals which include gravity magnetic seismic electrical electromagnetic radioactivity and well logging methods All aspects of these methods are described including basic theory field equipment techniques of data acquisition data processing and interpretation with the objective of locating commercial deposits of minerals oil and gas and determining their extent In the fourteen years or so since the first edition of Applied Geophysics many changes have taken place in this field mainly as the result of new techniques better instrumentation and increased use of computers in the field and in the interpretation of data The authors describe these changes in considerable detail including improved methods of solving the inverse problem specialized seismic methods magnetotellurics as a practical exploration method time domain electromagnetic methods increased use of gamma ray spectrometers and improved well logging methods and interpretation **Seismic Data**

Interpretation using Digital Image Processing Abdullatif A. Al-Shuhail, Saleh A. Al-Dossary, Wail A. Mousa, 2017-06-05 Bridging the gap between modern image processing practices by the scientific community at large and the world of geology and reflection seismology This book covers the basics of seismic exploration with a focus on image processing techniques as applied to seismic data Discussions of theories concepts and algorithms are followed by synthetic and real data examples to provide the reader with a practical understanding of the image processing technique and to enable the reader to apply these techniques to seismic data The book will also help readers interested in devising new algorithms software and hardware for interpreting seismic data Key Features Provides an easy to understand overview of popular seismic processing and interpretation techniques from the point of view of a digital signal processor Presents image processing concepts that may be readily applied directly to seismic data Includes ready to run MATLAB algorithms for most of the techniques presented The book includes essential research and teaching material for digital signal and image processing individuals interested in learning seismic data interpretation from the point of view of digital signal processing It is an ideal resource for students professors and working professionals who are interested in learning about the application of digital signal processing theory and algorithms to seismic data *Review of Progress in Quantitative Nondestructive Evaluation* Donald O. Thompson, Dale E. Chimenti, 2013-12-01 This volume Parts A and B contains the edited papers presented at the annual Review of Progress in Quantitative Nondestructive Evaluation held at Bowdoin College Brunswick ME on July 24 28 1989 The Review was organized by the Center for Advanced NDE at the Ames Laboratory of the U S Department of Energy in cooperation with the Office of Basic Energy Sciences USDOE and the Materials Laboratory at Wright Patterson Air Force Base The statistics for

the 1989 Review of Progress in QNDE include a total of over 460 participants from the U S and nine foreign countries who presented some 325 papers Over the years this conference has grown into one of the largest most significant gatherings of NDE researchers and engineers in the world The meeting was divided into 35 sessions with as many as four sessions running concurrently and covering all stages of NDE development from basic research investigations to early engineering applications and all methods of inspection science from ultrasonics to x ray tomography The Editors have organized the papers in the Proceedings according to topical subject headings rather than in the original order of presentation This rearrangement yields a more user friendly reference work and follows a pattern now familiar to regular attendees of the Review Some changes in the headings and their subcategories have been introduced to accommodate dynamic evolution of the field as we observe it
