Magic and the Will to Science Agnes Horvath, 2024-03-19 This book offers a political anthropological perspective on the problematic character of science combining insights from historical sociology political theory and cultural anthropology Its central idea departing from the works of Frances Yates and the Gnosticism thesis of Eric Voegelin is that far from being the radical opposite of magic modern science effectively grew out of magic and its varieties like alchemy Hermetic philosophy the occult Gnosticism and Neoplatonism Showing that the desire to use science to solve various real or presumed problems of human existence has created a permanent liminal crisis it contends that the will to science is parasitic existing as it does in sheer relationality outside of and in between concrete places and communities A study of the mutual relationship between magic and science in different historical eras ranging from the Early Neolithic to recent disease prevention ideas **Magic and the Will to Science** will appeal to scholars and students of social and anthropological theory and the philosophy and sociology of science **Magic, Science and Society** Alex Dennis, 2024-06-14 Magic Science and Society investigates the way the rationality debate has developed over the last century from E E Evans Pritchard's study of Azande magic through Peter Winch's argument that there can be no such thing as a social science across the arguments about the proper status of science in the 1970s and 1980s to the epistemological and ontological turns of the early twenty first century Different people have different understandings of what is rational some practise magic some orientate to legal convention and tradition and others defer to science and logic Starting with anthropological studies of witchcraft and working through to contemporary debates about epistemology and ontology in social science this book systematically examines the ways key questions about these issues have been framed and answered These include Can magic be real either for members of the cultures that practise it or more generally How can we arbitrate between different types of rationality Is science a benchmark for studying other forms of rationality or just a cultural practice like any other What are the implications of these issues for the social

sciences themselves This book will be of interest to anthropologists sociologists philosophers of the social sciences and science studies practitioners

Magic's Translations Margaret J. Wiener, 2025-04-04 Do you believe in magic This familiar question suggests magic is easily recognized but unreal In *Magic's Translations* Margaret J Wiener argues that such views are shaped by historical power struggles especially in Europe's relations with the wider world Focusing on nineteenth and twentieth century Dutch interactions with Indonesians Wiener reveals how colonial agents framed unfamiliar practices practitioners and objects as magic rendering distinct phenomena fundamentally alike and advancing colonizing projects that deemed magic antithetical to reason and reality While colonial authorities including ethnologists mobilized the concept of magic to differentiate Europeans from Indonesians nature from culture reason from superstition and fact from fetish their efforts produced unexpected outcomes Some Indonesian artifacts and acts not only retained their power but invaded European experiences As anthropologists were among the key translators of magic throughout the world Wiener intersperses accounts of magic's translations in the Indies with reflections on anthropology's ongoing engagement with the concept She demonstrates that magic became an object of expert knowledge political control and popular fascination rather than a self-evident category or relic of naïve belief

Science, Technology and Magic in The Witcher Kristine Larsen, 2023-02-13 As Andrzej Sapkowski was fleshing out his character Geralt of Rivia for a writing contest he did not set out to write a science textbook or even a work of science fiction However the world that Sapkowski created in his series *The Witcher* resulted in a valuable reflection of real world developments in science and technology As the *Witcher* books have been published across decades the sorcery in the series acts as an extension of the modern science it grows alongside This book explores the fascinating entanglement of science and magic that lies at the heart of Sapkowski's novel series and its widely popular video game and television adaptations This is the first English language book length treatment of magic and science in the *Witcher* universe These are examined through the lenses of politics religion history and mythology Sapkowski's richly detailed universe investigates the sociology of science and ponders some of the most pressing modern technological issues such as genetic engineering climate change weapons of mass destruction sexism speciesism and environmentalism Chapters explore the unsettling realization that the greatest monsters are frequently human and their heinous acts often involve the unwitting hand of science

Gunn has also been one of the genre's leading writers. His classic novels *Star Bridge* with Jack Williamson, *The Joy Makers*, *The Immortals*, and *The Listeners* helped shape the field. Now in his nineties, he remains a prominent voice. His forthcoming novel is *Transformation*. Magic: A History Chris Gosden, 2020-11-10. An Oxford professor of archaeology explores the unique history of magic, the oldest and most neglected strand of human behavior and its resurgence today. Three great strands of belief run through human history: Religion is the relationship with one god or many gods; masters of our lives and destinies; Science distances us from the world, turning us into observers and collectors of knowledge; And magic is direct human participation in the universe, where we have influence on the world around us, and the world has influence on us. Over the last few centuries, magic has developed a bad reputation thanks to the unsavory tactics of shady practitioners and to a successful propaganda campaign on the part of religion and science which denigrated magic as backward, irrational, and primitive. In *Magic*, however, the Oxford professor of archaeology, Chris Gosden, restores magic to its essential place in the history of the world, revealing it to be an enduring element of human behavior that plays an important role for individuals and cultures. From the curses and charms of ancient Greek, Roman, and Jewish magic to the shamanistic traditions of Eurasia, indigenous America, and Africa, from the alchemy of the Renaissance to the condemnation of magic in the colonial period and the mysteries of modern quantum physics, Gosden's startling, fun, and colorful history supplies a missing chapter of the story of our civilization. Drawing on decades of research around the world, touching on the first known horoscope, a statue ordered into exile, and the mystical power of tattoos, Gosden shows what magic can offer us today and how we might use it to rethink our relationship with the world. *Magic* is an original, singular, and sweeping work of scholarship, and its revelations will leave a spell on the reader.

Magical Consciousness Susan Greenwood, Erik D. Goodwyn, 2015-08-20. How does a mind think magically? The research documented in this book is one answer that allows the disciplines of anthropology and neurobiology to come together to reveal a largely hidden dynamic of magic. Magic gets to the very heart of some theoretical and methodological difficulties encountered in the social and natural sciences, especially to do with issues of rationality. This book examines magic head-on, not through its instrumental aspects but as an orientation of consciousness. Magical consciousness is affective, associative, and synchronistic, shaped through individual experience within a particular environment. This work focuses on an in-depth case study using the anthropologist's own experience gained through years of anthropological fieldwork with British practitioners of magic. As an ethnographic view, it is an intimate study of the way in which the cognitive architecture of a mind engages the emotions and imagination in a pattern of meanings related to childhood experiences, spiritual communications, and the environment. Although the detail of the involvement in magical consciousness presented here is necessarily specific, the central tenets of *modus operandi* are common to magical thought in general and can be applied to cross-cultural analyses to increase understanding of this ubiquitous human

phenomenon **Symbolic Forms as the Metaphysical Groundwork of the Organon of the Cultural Sciences** Israel Bar-Yehuda Idalovich, 2014-10-16 This ambitious work reclassifies and restructures the history of ideas and the philosophy of culture through a wide ranging and novel use of the idea of the organon It does so by radically revising standard interpretations and theories of all branches of philosophy and by providing an intellectual and philosophical foundation for the new organon of the cultural sciences Furthermore the seeded idea that saw its growth in the form of this book is the unshakable conviction that the only way by which a new apparatus of philosophy an organon could be created is by harking back to the vast sources of imagination inspiration and mim sis This entire study is based on the notion that metaphysics insofar as it is concerned with the world in its entirety and with human being s existence and thought should provide the foundation for the organon of cultural sciences based on symbolic forms Given that the colossal amount of information and knowledge of philosophy arts humanities logic mathematics social sciences and natural sciences cannot be comprised analyzed and comprehended per se it is the organon s objective to extract the main principles ideas postulates theorems and theories of the cultural sciences and subsequently to shape and restructure them as symbolic forms Since all these principles are grounded on Becoming which is not a stable or fixed entity such as Being substance or thing the symbolic forms preserve and change elevate and further the organon of the cultural sciences via a critical dialectical process **A History of Magic and Experimental Science: The first thirteen centuries of our era** Lynn Thorndike, 1923 This is a new release of the original 1923 edition Unraveling Creation and Evolution Through Science and the Bible Paul Bryan, 2025-05-22 Dead dinosaurs and Neanderthals have secrets Many people don t know that modern science genetics dinosaur fossils and even Neanderthals support the validity of the Bible and the creation account Unraveling Creation and Evolution Through Science and the Bible addresses traditional and less known aspects of creation and evolution through the lenses of science and the Bible Readers will discover mysteries facts theories and myths beyond their current thinking **The Science of Society** William Graham Sumner, Albert Galloway Keller, Maurice Rea Davie, 1927 Vols 1 3 paged continuously Vol 4 by W G Sumner A G Keller and M R Davie Published under the auspices of the Sumner Club on the foundation established in memory of Philip Hamilton McMillan of the class of 1894 Yale College Bibliographical note v 4 p 1193 1268
