Sound Recording Technology and American Literature Jessica E. Teague,2021-05-20 Phonographs tapes stereo LPs digital remix how did these remarkable technologies impact American writing This book explores how twentieth century writers shaped the ways we listen in our multimedia present Uncovering a rich new archive of materials this book offers a resonant reading of how writers across several genres such as John Dos Passos Langston Hughes William S Burroughs and others navigated the intermedial spaces between texts and recordings Numerous scholars have taken up remix a term co opted from DJs and sound engineers as the defining aesthetic of twenty first century art and literature Others have examined modernism s debt to the phonograph But in the gap between these moments one finds that the reciprocal relationship between the literary arts and sonic technologies continued to evolve over the twentieth century A mix of American literary history sound studies and media archaeology this interdisciplinary study will appeal to scholars students and audiophiles

Selected Computer Articles, 1983-1984,1983 **Technical News Bulletin**,1970 **Thermal Energy** Yatish T. Shah,2018-01-12 The book details sources of thermal energy methods of capture and applications It describes the basics of

thermal energy including measuring thermal energy laws of thermodynamics that govern its use and transformation modes of thermal energy conventional processes devices and materials and the methods by which it is transferred It covers 8 sources of thermal energy combustion fusion solar fission nuclear geothermal microwave plasma waste heat and thermal energy storage In each case the methods of production and capture and its uses are described in detail It also discusses novel processes and devices used to improve transfer and transformation processes Nanostructured Thin Films and Nanodispersion Strengthened Coatings Andrey A. Voevodin, Dmitry V. Shtansky, Evgeny A. Levashov, John J. Moore, 2006-04-11 This volume contains proceedings of the NATO Russia Advanced Research Workshop on Nanostructured Thin Films and Nanodispersion Strengthened Coatings December 2003 Moscow During this Workshop leading researchers from twelve countries had presented and discussed most recent developments in the fields of plasma physics and surface engineering related to the preparation and applications of nanostructured thin films and nanodispersion strengthened coatings These presentations are encompassed in 31 individual chapters. The chapters are assembled in five parts in according to the workshop sessions Part I is a compilation of chapters on hard and tribological coatings The recent advances in this area are significant in that it is now possible to engineer strong hard and tough coatings that can operate at temperatures higher than 1200 C and exhibit smart adaptive characteristics. These coatings are based on an amorphous matrix e g nitrides carbides borides or carbon in which there is a controlled nucleation and growth of ultra hard nanoparticles of crystalline carbides nitrides borides and oxides The critical feature is the control of both the particle size i e less than 10 nm and interpartical spacing of a few nanometers The smart or adaptive characteristic is engineered into the nanostructures using similar sized less than 10 nm particles of metallic chalcogenidese ductile metals or glass forming elements to provide high lubricity and chemical adaptation at the environment change e g high and low humidities and Guide to NIST (National Institute of Standards and Technology) DIANE Publishing Company, 1997-07 temperatures Gathers in one place descriptions of NIST's many programs products services and research projects along with contact names phone numbers and e mail and World Wide Web addresses for further information It is divided into chapters covering each of NIST's major operating units In addition each chapter on laboratory programs includes subheadings for NIST organizational division or subject areas Covers electronics and electrical engineering manufacturing engineering chemical science and technology physics materials science and engineering building and fire research and information technology
