Dohe, 2016-07-01 Is the Germanic god Wotan Odin really an archaic archetype of the Spirit Was the Third Reich at first a collective individuation process After Friedrich Nietzsche heralded the death of God might the divine have been reborn as a collective form of self redemption on German soil and in the Germanic soul In Jung's Wandering Archetype Carrie Dohe presents a study of Jung's writings on Germanic psychology from 1912 onwards exploring the links between his views on religion and race and providing his perspective on the answers to these questions Dohe demonstrates how Jung's view of Wotan as an archetype of the collective Germanic psyche was created from a combination of an ancient discourse on the Germanic barbarian and modern theories of primitive religion and how he further employed völkisch ideology and various colonialist discourses to contrast hypothesized Germanic Jewish and primitive psychologies He saw Germanic psychology as dangerous yet vital promising rebirth and rejuvenation and compared Wotan to the Pentecostal Spirit suggesting that the Germanic psyche contained the necessary tension to birth a new collective psycho spiritual attitude In racializing his religiously inflected psychological theory Jung combined religious and scientific discourses in a particularly seductive way masterfully weaving together the objective language of science with the eternal language of myth Dohe concludes the book by examining the use of these ideas in modern Germanic religion in which members claim that religion is a matter of race This in depth study of Jung's views on psychology race and spirituality will be fascinating reading for all academics and students of Jungian and post Jungian studies religious studies and the history of religion

Jung's Reception of Picasso and Abstract Art Lucinda Hill,2022-03-31 This book explores the nature of Jung s understanding of modern art in particular his reception to the work of Picasso and his striking prejudice shown in his controversial essay of 1932 Offering an important contribution towards understanding Jung s attitudes towards Picasso and modern art the book addresses the impact that Jung s unwillingness to engage in a deeper exploration of modern artforms had on the development of his psychological ideas

It explores and uncovers the reasons for Jung's derogatory view of Picasso and abstract art more generally revealing how Jung was unable to remain objective due to his own complex and equally fascinating relationship with art and the psychology of image making. The book argues that modern art parallels Jung's interests by embracing the spirit of experimentation and using new imagery to challenge creative conceptions which makes Jung's attitudes towards modern art all the more surprising. Jung's Reception of Picasso and Abstract Art will be of great interest to researchers, academics and those interested in analytical psychology, Jungian studies, art history and modernism, aesthetics and psychoanalysis.

Encyclopedia of the Sciences of Learning Norbert M. Seel, 2011-10-05. Over the past century, educational psychologists and researchers have posited many theories to explain how individuals learn, i.e. how they acquire, organize and deploy knowledge and skills. The 20th century can be considered the century of psychology on learning and related fields of interest such as motivation, cognition, metacognition, etc. and it is fascinating to see the various mainstreams of learning remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of psychology and epistemology. Beyond folk psychology and its naïve theories of learning, psychological learning theories can be grouped into some basic categories such as behaviorist learning theories, connectionist learning theories, cognitive learning theories, constructivist learning theories, and social learning theories. Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines such as philosophy and epistemology, education, information science, biology, and as a result of the emergence of computer technologies, especially also in the field of computer sciences and artificial intelligence. As a consequence, machine learning struck a chord in the 1980s and became an important field of the learning sciences in general. As the learning sciences became more specialized and complex, the various fields of interest were widely spread and separated from each other as a consequence; even presently there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely. The Encyclopedia of the Sciences of Learning provides an up-to-date, broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields, including relevant areas of instruction, pedagogy, cognitive sciences, and especially machine learning and knowledge engineering. This modern compendium will be an indispensable source of information for scientists, educators, engineers, and technical staff active in all fields of learning. More specifically, the Encyclopedia provides fast access to the most relevant theoretical terms, provides up-to-date, broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences, and communication technologies, supplies clear and precise explanations of the theoretical terms, cross-references to related entries, and up-to-date references to important research and

publications The Encyclopedia also contains biographical entries of individuals who have substantially contributed to the sciences of learning the entries are written by a distinguished panel of researchers in the various fields of the learning sciences
