Making Of Physicists:

Making Physics Robert P. Crease, 1999 From Nobel Prize winning work in atomic physics to community concerns over radiation leaks Brookhaven National Laboratory's ups and downs track the changing fortunes of big science in the United States since World War II But Brookhaven is also unique it was the first major national laboratory built specifically for basic civilian research In Making Physics Robert P Crease brings to life the people the instruments the science and the politics of Brookhaven's first quarter century

The Making of Physicists, Rajkumari Williamson, 1987 Personal accounts by 18 senior physicists of their undergraduate and postgraduate days in the inter war period 1918-1939 The narratives illuminate the teaching and research pursuits of physicists in a period when physics was undergoing some remarkable changes and the revolutionary ideas of the first two decades of this century were finding their way into the teaching syllabus Of great interest to physicists educationalists historians of science and the general science readers

Making Physics Fun Robert Prigo, 2015-02-10 Boost student interest and understanding in the physical sciences Teaching physical science in the elementary and middle grades can be challenging for busy teachers faced with growing demands and limited resources Robert Prigo provides fun and engaging activities using safe available materials that educators can easily incorporate into lesson plans Extensive examples sample inquiry questions and ideas for initiating units are readily available for teachers to pick and choose from to meet student needs The result of more than two decades of professional development work with hundreds of teachers and administrators this resource addresses specific areas of physical science including motion and force waves and sound light and electromagnetic waves and more Dozens of activities demonstrating physics in action help students of all ages relate physics principles to their everyday experiences This practitioner friendly resource helps teachers Address the big ideas in K-8 science education Promote student understanding with ready to use learning experiences Use hands on activities to help students make larger real world connections Assemble classroom learning centers to facilitate deeper understanding of basic physics principles With conceptual summaries to support teachers proficiency and understanding of the content this guidebook is ideal for bringing physics to life for students in the classroom and in their lives

Physics in the Making A. Sarlemijn, M.J. Sparnaay, 2012-12-02 H B G Casimir's life interests and works are intertwined with the important developments that have taken place in physics during this century This book was compiled by his friends and admirers in honour of his 80th birthday and concentrates mainly on Casimir's achievements in the field of physics though without ignoring the peripheral areas of the history and philosophy of physics in which he was greatly interested The book is divided into four parts Part I describes Casimir's teachers Ehrenfest Bohr and Pauli and will be of general interest due to the key role which these physicists played in modern developments The articles do give new facts and provide new insights into the history of modern physics Part II consists of essays on recent developments in various areas of physics in which Casimir has taken an active interest such as the modern concept of time statistical foundations of

electrodynamic theory and field theory The subjects covered in Part III have been selected because of Casimir's efforts in the industrial research area of physics They cover past present and future expectations in research Part IV contains an essay which discusses a philosophy of physics currently under discussion which states that phenomenological laws prevail over fundamental ones for the purpose of experimental and technical physics A second chapter in this final part gives a critical analysis of this philosophical view The book is concluded by an appendix discussing Casimir's activities as a lecturer written by a former student

Beyond Public Engagement Pedro Ruiz-Castell, 2015-02-05 University collections have unquestionably played a central role in the production of knowledge They are valuable resources for studying the construction of traditions and identities proving particularly interesting for understanding how universities have shaped societies Furthermore they have also been mobilised as cultural mediators to legitimise academic institutions and bring the results of their activities into the public sphere As such academic collections undoubtedly enable reflection on the complex relationships between heritage knowledge scholars and the public Given their importance the development of successful strategies in terms of public engagement has recently become a major concern for those working with these academic collections However the complexity of university heritage encompasses a diversity of issues that are connected with more than just the public sphere This volume discusses some of the problems challenges and opportunities of academic heritage beyond the mere concern for engaging with the public *The (Pre-)dawning Of Functional Specialization In Physics* Terrance J Quinn, 2017-03-14 In modern physics various

fundamental problems have become topics of ongoing debate There was the 20th century climb to a Standard Model still accurate at the highest energy levels obtainable so far But since the 1970 s a different approach to physics advocates for theories such as string theory known for their mathematical elegance even though they either cannot be verified in data or contradict presently known experimental results In philosophy of physics there is a gradually emerging consensus that philosophy of physics and physics somehow contribute to a common enterprise But there is little sign of progress toward consensus about the nature of that unity All the while it is generally recognized that physics is interdisciplinary There are of course differences in focus But implicitly at least there are no sharp dividing lines between physics and philosophy of physics pure and applied physics physical chemistry biophysics medical physics history and philosophy of physics physics and society physics education and so on What then is progress in physics The question here is not about ideal structures but asks about what is going on in physics Beginnings in discerning the presence of eight main tasks help reveal the pre emergence of a normative omni disciplinary basis for collaboration that once adverted to promises to be constitutive of a new and increasingly effective control of meaning Originally discovered by Bernard Lonergan in 1965 progress in the new collaboration will not seek to eliminate specialized expertise It will though divide tasks within an eightfold functional division of labor This book invites attention to data for each of the eight main tasks evident and self evident in existing scholarship in the community The book also makes preliminary efforts toward envisioning something of what functional collaboration will look like in physics the Academy and Society

New Ground Karen S. Sullenger, R. Steven Turner, 2015-05-07 Between 2004 and 2009 university educators practicing scientists museum and science centre personnel historians and K 12 teachers in Canada s eastern Atlantic provinces came together as a research community to investigate informal learning in science technology and mathematics The interdisciplinary collaboration known as CRYSTAL Atlantique was sponsored by Canada s National Science and Engineering Research Council In this volume the CRYSTAL participants look back on their collective experience and describe research projects that pushed the boundaries of informal teaching and learning Those projects include encounters between students and practicing scientists in university laboratories and field studies summer camps for science engagement after school science clubs for teachers and students innovative software for computer assisted learning environmental problem solving in a comparative international context online communities devoted to solving mathematical problems and explorations of ethnomathematics among Canadian aboriginal peoples The editors and contributors stress the need for research on informal learning to be informed continuously by a notion of science as culture and they analyze the forms of resistance that studies of informal learning frequently encounter Above all they urge a more central place for informal science learning in the larger agenda of educational research today

Proceedings of the High School Conference of ... ,1912 Teaching Introductory Physics to Visually Impaired Learners
Antônio Carlos Fontes dos Santos,Marcio Velloso da Silveira,2025-09-30 Following global inclusion policies and initiatives more students with visual impairments are attending regular education in inclusive schools Universities also increasingly accept students with visual impairments in the most varied courses including engineering and physics However teachers do not always have experience with teaching this specific audience Teaching Introductory Physics to Visually Impaired Learners provides a gateway to understanding the difficulties encountered by this audience and provides ways for teachers to embrace this challenge The concept of inclusion is discussed in light of the historical evolution of the achievements of people with disabilities and the development of reading and writing in Braille in addition to other more modern tools such as cell phone applications The remaining chapters present methodologies for teaching mechanics waves electrodynamics optics and modern physics in classes where there are one or more students with visual impairments The main target audience for this book is elementary and higher education physics teachers and researchers This book is also of great value to anyone including teachers from other areas and students with visual impairments who are looking for teaching materials that facilitate learning for people with visual impairments Key Features The first book to help readers understand the difficulties of inclusive physics teaching for students with visual impairment Allows the reader to have a broader view of what visual impairment is bringing together theoretical tools necessary to value and promote inclusive education Encourages the reader to reproduce the physics teaching methodology with low cost materials which facilitates its implementation in the classroom
