Modelling Irregularly Spaced Financial Data:

Modelling Irregularly Spaced Financial Data Nikolaus Hautsch, 2011-01-07 This book provides a methodological framework to model univariate and multivariate irregularly spaced financial data It gives a thorough review of recent developments in the econometric literature puts forward existing approaches and opens up new directions The book presents alternative ways to model so called financial point processes using dynamic duration as well as intensity models and discusses their ability to account for specific features of point process data like the occurrence of time varying covariates censoring mechanisms and multivariate structures Moreover it illustrates the use of various types of financial point processes to model financial market activity from different viewpoints and to construct volatility and liquidity measures under explicit consideration of the passing trading time *Modelling Irregularly Spaced Financial Data* Nikolaus Hautsch, 2004-04-06

Modelling and Forecasting High Frequency Financial Data Stavros Degiannakis, Christos Floros, 2016-04-29 The global financial crisis has reopened discussion surrounding the use of appropriate theoretical financial frameworks to reflect the current economic climate There is a need for more sophisticated analytical concepts which take into account current quantitative changes and unprecedented turbulence in the financial markets This book provides a comprehensive guide to the quantitative analysis of high frequency financial data in the light of current events and contemporary issues using the latest empirical research and theory It highlights and explains the shortcomings of theoretical frameworks and provides an explanation of high frequency theory emphasising ways in which to critically apply this knowledge within a financial context *Modelling and Forecasting High Frequency Financial Data* combines traditional and updated theories and applies them to real world financial market situations It will be a valuable and accessible resource for anyone wishing to understand quantitative analysis and modelling in current financial markets **Econometrics of Financial High-Frequency Data**

Nikolaus Hautsch, 2011-10-12 The availability of financial data recorded on high frequency level has inspired a research area which over the last decade emerged to a major area in econometrics and statistics The growing popularity of high frequency econometrics is driven by technological progress in trading systems and an increasing importance of intraday trading liquidity risk optimal order placement as well as high frequency volatility This book provides a state of the art overview on the major approaches in high frequency econometrics including univariate and multivariate autoregressive conditional mean approaches for different types of high frequency variables intensity based approaches for financial point processes and dynamic factor models It discusses implementation details provides insights into properties of high frequency data as well as institutional settings and presents applications to volatility and liquidity estimation order book modelling and market microstructure analysis **Encyclopedia of Financial Models** Frank J. Financial Risk Management with Bayesian Estimation of GARCH Models David Ardia, 2008-05-08 This book presents in detail methodologies for the Bayesian estimation of single regime and regime switching GARCH models These models are widespread and essential tools in financial econometrics and have until recently mainly been estimated using the classical Maximum Likelihood technique As this study aims to demonstrate the Bayesian approach offers an attractive alternative which enables small sample results robust estimation model discrimination and probabilistic statements on nonlinear functions of the model parameters The author is indebted to numerous individuals for help in the preparation of this study Primarily I owe a great debt to Prof Dr Philippe J Deschamps who inspired me to study Bayesian econometrics suggested the subject guided me under his supervision and encouraged my research I would also like to thank Prof Dr Martin Wallmeier and my colleagues of the Department of Quantitative Economics in particular Michael Beer Roberto Cerratti and Gilles Kaltenrieder for their useful comments and discussions I am very indebted to my friends Carlos Ord as Criado Julien A Straubhaar Jerome Ph A Taillard and Mathieu Vuilleumier for their support in the fields of economics mathematics and statistics Thanks also to my friend Kevin Barnes who helped with my English in this work Finally I am greatly indebted to my parents and grandparents for their support and encouragement while I was struggling with the writing of this thesis

[The Oxford Handbook of Economic Forecasting](#) Michael P. Clements, David F. Hendry, 2011-06-29 This Handbook provides up to date coverage of both new and well established fields in the sphere of economic forecasting The chapters are written by

world experts in their respective fields and provide authoritative yet accessible accounts of the key concepts subject matter and techniques in a number of diverse but related areas It covers the ways in which the availability of ever more plentiful data and computational power have been used in forecasting in terms of the frequency of observations the number of variables and the use of multiple data vintages Greater data availability has been coupled with developments in statistical theory and economic analysis to allow more elaborate and complicated models to be entertained the volume provides explanations and critiques of these developments These include factor models DSGE models restricted vector autoregressions and non linear models as well as models for handling data observed at mixed frequencies high frequency data multiple data vintages methods for forecasting when there are structural breaks and how breaks might be forecast Also covered are areas which are less commonly associated with economic forecasting such as climate change health economics long horizon growth forecasting and political elections Econometric forecasting has important contributions to make in these areas along with how their developments inform the mainstream

Economic Dynamics and Information Jaroslav Zajac, 2007-08-01 This book analyzes the existence of equilibria in economies having a measured space of agents and a continuum of agents and commodities Excessive homogeneity with respect to agent productivity leads to instability and non uniqueness of a given stationary state and the indeterminacy of the corresponding stationary state equilibrium Sufficient heterogeneity leads to global saddle path stability uniqueness of a given stationary state and the global uniqueness of the corresponding equilibrium

Econometric Modelling of Stock Market Intraday Activity Luc Bauwens, Pierre Giot, 2013-11-11 Over the past 25 years applied econometrics has undergone tremendous changes with active developments in fields of research such as time series labor econometrics financial econometrics and simulation based methods Time series analysis has been an active field of research since the seminal work by Box and Jenkins 1976 who introduced a general framework in which time series can be analyzed In the world of financial econometrics and the application of time series techniques the ARCH model of Engle 1982 has shifted the focus from the modelling of the process in itself to the modelling of the volatility of the process In less than 15 years it has become one of the most successful fields of applied econometric research with hundreds of published papers As an alternative to the ARCH modelling of the volatility Taylor 1986 introduced the stochastic volatility model whose features are quite similar to the ARCH specification but which involves an unobserved or latent component for the volatility While

being more difficult to estimate than usual GARCH models stochastic volatility models have found numerous applications in the modelling of volatility and more particularly in the econometric part of option pricing formulas Although modelling volatility is one of the best known examples of applied financial econometrics other topics factor models present value relationships term structure 2 models were also successfully tackled **Encyclopedia of Financial Models, Volume II** Frank J.

Kokot,2012-08-27 The present study has been accepted as a doctoral thesis by the Department of Economics of the Johann Wolfgang Goethe University in Frankfurt am Main It grew out from my five year long participation in two research projects Econometric analysis of transaction intensity and volatility on financial markets and Microstructure on financial markets that were both conducted by the chair of Statistics and Econometrics Empirical Economic Research at the Department of Economics and Business Administration Johann Wolfgang Goethe University in Frankfurt am Main and financed by the state of Hessen During this time I have benefitted from many people First and foremost I would like to thank my thesis supervisor

Prof Dr Reinhard Hujer for initiating and supporting my studies with great encouragement I am also very grateful to Prof Dr Christian Schlag for acting as the second thesis supervisor Furthermore I wish to thank Prof Dr Joachim Grammig who introduced me to the topics covered in this study in the first place and helped me to sharpen my views on econometrics and financial market microstructure theory through many discussions and also through his willingness to work with me on several related studies

Introduction to Stochastic Calculus for Finance Dieter Sondermann, 2006-12-02 Although there are many textbooks on stochastic calculus applied to finance this volume earns its place with a pedagogical approach The text presents a quick but by no means dirty road to the tools required for advanced finance in continuous time including option pricing by martingale methods term structure models in a HJM framework and the Libor market model The reader should be familiar with elementary real analysis and basic probability theory

Financial Econometrics Christian Gourieroux, Joann Jasiak, 2022-12-13 Financial econometrics is a great success story in economics Econometrics uses data and statistical inference methods together with structural and descriptive modeling to address rigorous economic problems Its development within the world of finance is quite recent and has been paralleled by a fast expansion of financial markets and an increasing variety and complexity of financial products This has fueled the demand for people with advanced econometrics skills For professionals and advanced graduate students pursuing greater expertise in econometric modeling this is a superb guide to the field's frontier With the goal of providing information that is absolutely up to date essential in today's rapidly evolving financial environment Gourieroux and Jasiak focus on methods related to foregoing research and those modeling techniques that seem relevant to future advances They present a balanced synthesis of financial theory and statistical methodology Recognizing that any model is necessarily a simplified image of reality and that econometric methods must be adapted and applied on a case by case basis the authors employ a wide variety of data sampled at frequencies ranging from intraday to monthly These data comprise time series representing both the European and North American markets for stocks bonds and foreign currencies Practitioners are encouraged to keep a critical eye and are armed with graphical diagnostics to eradicate misspecification errors This authoritative state of the art reference text is ideal for upper level graduate students researchers and professionals seeking to update their skills and gain greater facility in using econometric models All will benefit from the emphasis on practical aspects of financial modeling and statistical inference Doctoral candidates will appreciate the inclusion of detailed mathematical derivations of the deeper results as well as the more advanced problems concerning high frequency data and risk control By establishing a link between practical questions and the answers provided by financial and statistical theory the book also addresses the needs of applied researchers employed by financial institutions

High Frequency Financial Econometrics Luc Bauwens, Winfried Pohlmeier, David Veredas, 2007-12-31 In this paper we propose a new econometric approach to jointly model the time series dynamics of the trading process and the revisions of ask and bid prices We use this model to test the validity of certain symmetry assumptions very common among microstructure models Namely we test whether ask and bid quotes respond symmetrically to trade related shocks and whether buyer initiated trades and seller initiated trades are equally informative In essence the procedure we propose generalizes Hasbrouck's 1991 vector autoregressive model for signed trades and changes in the quote midpoint by relaxing the implicit symmetry assumptions in his model The properties of the empirical model are derived from a structural dynamic model for ask and bid prices In this model ask and bid prices share a common long run component the efficient price The long term value of the stock varies due to buyer initiated shocks seller initiated shocks and trade unrelated shocks The transitory components of ask and bid prices are characterized by two correlated and trade dependent stochastic processes whose dynamics are allowed to differ The trading process is endogenous Buyer and seller initiated trades are generated by two idiosyncratic but mutually dependent stochastic processes The generating processes of quotes and trades both depend on several exogenous variables that feature the trades and the market conditions

Econometric Analysis of Irregularly-spaced Transaction Data Using a New Class of Accelerated Failure Time Models with Application to Financial Transaction Data Jeffrey R. Russell, 1996

Handbook of Financial Econometrics Yacine Ait-Sahalia, Lars Peter Hansen, 2009-10-19 This collection of original articles 8 years in the making shines a bright light on recent advances in financial econometrics From a survey of mathematical and statistical tools for understanding nonlinear Markov processes to an exploration of the time series evolution of the risk return tradeoff for stock market investment noted scholars Yacine Ait-Sahalia and Lars Peter Hansen benchmark the current state of knowledge while contributors build a framework for its growth Whether in the presence of statistical uncertainty or the proven advantages and limitations of value at risk models readers will discover that they can set few constraints on the value of this long awaited volume Presents a broad survey of current research from local characterizations of the Markov process dynamics to financial market trading activity Contributors include Nobel Laureate Robert Engle and leading econometricians Offers a clarity of method and explanation unavailable in other financial econometrics collections

Market Risk Analysis, Practical Financial Econometrics Carol Alexander, 2008-05-27 Written by leading market risk academic Professor Carol Alexander Practical Financial Econometrics forms part two of the Market Risk Analysis four volume set It introduces the econometric techniques that are commonly applied to finance with a critical and selective exposition emphasising the areas of econometrics such as GARCH cointegration and copulas that are required for resolving problems in market risk analysis The book covers material for a one semester graduate course in applied financial econometrics in a very pedagogical fashion as each time a concept is

introduced an empirical example is given and whenever possible this is illustrated with an Excel spreadsheet All together the Market Risk Analysis four volume set illustrates virtually every concept or formula with a practical numerical example or a longer empirical case study Across all four volumes there are approximately 300 numerical and empirical examples 400 graphs and figures and 30 case studies many of which are contained in interactive Excel spreadsheets available from the accompanying CD ROM Empirical examples and case studies specific to this volume include Factor analysis with orthogonal regressions and using principal component factors Estimation of symmetric and asymmetric normal and Student t GARCH and E GARCH parameters Normal Student t Gumbel Clayton normal mixture copula densities and simulations from these copulas with application to VaR and portfolio optimization Principal component analysis of yield curves with applications to portfolio immunization and asset liability management Simulation of normal mixture and Markov switching GARCH returns Cointegration based index tracking and pairs trading with error correction and impulse response modelling Markov switching regression models Eviews code GARCH term structure forecasting with volatility targeting Non linear quantile regressions with applications to hedging
