## **Pathobiology Of The Human Atherosclerotic Plaque:**

Pathobiology of the Human Atherosclerotic Plaque Seymour Glagov, William P., III Newman, Sheldon A. Schaffer, 2012-12-06 Seymour Glagov The last meeting devoted exclusively to an examination of the atherosclerotic plaque took place in Chicago 25 years ago under the joint auspices of the Council on Arteriosclerosis of the American Heart Association and the Chicago Heart Association The proceedings were published subsequently in a volume entitled Evolution of the Atherosclerotic Plaque edited by Richard J Jones 1 Both experimental and human lesions were considered and several provocative new approaches to the disorder were discussed The electron microscope was being applied systematically to the study of blood vessels at that time so that details of the infrastructure and cellular composition of the artery wall and of atherosclerotic lesions were presented in some detail There was as one result of these explorations considerable discussion of morphologic evidence suggesting that the principal cell involved in the atherogenic process was neither the fibroblast nor the macrophage as had been supposed but the smooth muscle cell In particular the findings indicated that this cell could incorporate lipid and become a foam cell

**Cell Interactions in Atherosclerosis** Horst Robenek, Nicholas J. Severs, 2024-12-06 Cell Interactions in Atherosclerosis covers the scientific foundations of the most important disease inflicting the developed world today It presents a collection of topical aspects on the general theme of cell interactions in atherosclerosis providing authoritative up to the minute accounts of how new developments in cell biology have advanced our understanding of these cellular interactions The book is amply illustrated with electron micrographs and light micrographs incorporating modern cytochemical procedures Cell Interactions in Atherosclerosis will interest all medical and scientific professionals dealing with atherosclerosis and heart disease

Recent Progress in Atherosclerosis Research E. Vollmer, A. Roessner, 2012-12-06 This monograph on recent progress in atherosclerosis research presents state of the art morphological investigations on the cells and their metabolism in the atherosclerotic plaque in situ The spectrum of methods includes immunohistologic and immunoelectron microscopic investigations on the localization of apolipoproteins in the cells of the arterial intima presenting new data on the lipoprotein metabolism in plaque The collagen metabolism is analysed by in situ hybridization techniques for demonstrating the synthesis of different collagen types on the messenger RNA level Concentrating on in situ investigations with sophisticated morphological methods the widespread discussion on atherogenesis is focused on the arterial wall and its morphological alterations As morphology remains the basis for understanding the pathogenesis of disease the results presented here could be of interest not only to pathologists but also to clinicians and researchers working in the field of biology of atherosclerosis

**Pathobiology of Human Disease**, 2014-08-01 Pathobiology of Human Disease bridges traditional morphologic and clinical pathology molecular pathology and the underlying basic science fields of cell biology genetics and molecular biology which have opened up a new era of research in pathology and underlie the molecular basis of human disease The work spans

more than 48 different biological and medical fields in five basic sections Human Organ Systems Molecular Pathology Basic Mechanisms of Diseases Animal Models Other Model Systems Experimental Pathology Clinical Pathology Each article provides a comprehensive overview of the selected topic to inform a broad spectrum of readers from research professionals to advanced undergraduate students Reviews quantitative advances in the imaging and molecular analysis of human tissue new microarray technologies for analysis of genetic and chromosomal alterations in normal and diseased cells and tissues and new transgenic models of human disease using conditional tissue specific gene targeting Articles link through to relevant virtual microscopy slides illustrating side by side presentation of Normal and Disease anatomy and histology images Fully annotated with many supplementary full color images graphs tables and video files linked to data sets and to live references enabling researchers to delve deeper and visualize solutions *Vascular Mechanics and Pathology* Mano J.

Thubrikar,2007-01-06 Nowhere in the scientific progress has the schism in the knowledge been as striking as in the case of vascular mechanics and pathology This joint subject would serve as a classic example of science developed in two different directions It provided the motivation to put forth this book and establish a correlation between vascular mechanics and pathology The book focuses on the artery and arterial diseases The most fundamental functions of the artery are 1 to serve as a conduit of blood flow and 2 to serve as a container of blood pressure The artery carries the blood to all organs of the body and it uses pressure to drive the blood through the tissue to provide nourishment Hence the artery is both a pipe and a pressure vessel The artery pulsates about 103 000 times a day along with the beating heart In a lifetime the artery sustains cyclic pressure for about 3 8 billion cycles This obviously poses a significant challenge to the artery and therefore the artery must be endowed with special structure and properties to meet this challenge In the event that additional challenges are imposed such as high blood pressure it would not be surprising that the artery could break down or become diseased In the book we examine the structure and properties of the artery and study the challenges imposed on it with a view to understand the survival of and the development of the diseases in the artery Pathophysiology and Treatment of Atherosclerotic

Disease in Peripheral Arteries Alope Virmani Finn,2024-06-12 Pathophysiology and Treatment of Atherosclerotic Disease in Peripheral Arteries is a thorough review of the disease written by experts studying its detection and treatment These state of the art chapters summarize in a comprehensive manner emerging knowledge about this important area of medicine The pathophysiology and treatment of peripheral artery PAD disease remains poorly understood even by practitioners Often it is assumed that PAD should be treated in a similar fashion to coronary artery disease CAD when in fact recent data suggest a distinct pathophysiology with genetic risk having some but not complete overlap with CAD This is a novel reference of emerging data on the factors behind its development and progression detection and treatment suggest an emerging paradigm for this disease Provides understanding for the pathophysiology of PAD from pathologic and molecular perspectives Reviews state of the art modalities for its detection as well as the data surrounding new medical and interventional treatment

for PAD Elucidates the impact of new treatment modalities such as drug coated balloons and atherectomy devices such as lithotripsy

Arteriosclerosis H. Just, W. Hort, A.M. Zeiher, 2012-12-06 A vast literature has been concerned with arteriosclerosis and yet many aspects of pathogenesis and of the mechanism of development of the arteriosclerotic vascular lesion remain only poorly understood In recent years our knowledge of the earliest stages of arteriosclerosis have greatly improved By now we have learned to relate morphologic changes to disturbances in function It has been of particular importance that components of the arterial wall could be analyzed in regard to dysfunction for example in the endothelium or the vascular smooth muscle The interaction of the different morphological components of the vascular wall could thus be much better understood Likewise the interaction between the arterial wall and the flowing blood could be much better described including the intimate relationship between platelets and the endothelium the coagulation system and the endothelium the granulocytes and the endothelial cell layer as well as processes of migration of blood cells into the subendothelial space The recognition of functional and morphological disturbance has attained clinical significance not only because the arteriosclerotic diseases have quantitatively reached the dimensions of an epidemic that is of a

magnitude never been witnessed It is also because of the development of new drugs that interfere with the atherogenic process and thereby prevent the development of the disease or halt its progression It is also becoming increasingly possible to inhibit the occurrence of complications in existing arteriosclerotic lesions in manifest disease i e

**The Immunology of Cardiovascular Homeostasis and Pathology** Susanne Sattler,Teresa Kennedy-Lydon,2017-06-30 Cardiovascular immunology is a newly emerging research area investigating the crosstalk between the cardiovascular and the immune system This crosstalk is evident through 1 crucial immunological capacities and functions of cardiovascular cell types including cardiomyocytes fibroblasts endothelial cells pericytes and cardiac resident macrophages 2 the impact of aberrant immune function on the development of cardiovascular disease such as atherosclerosis direct and indirect immune mediated heart disease and vasculitis and 3 the crucial role of the immune system in cardiac repair and regeneration The Immunology of Cardiovascular Homeostasis and Pathology covers all these aspects of cardiovascular immunology starting with homeostatic immunological functions of traditional cardiovascular cell types and moving then to the role of the immune system in cardiovascular pathology and to recent research into targeting the immune system to boost cardiac healing and regeneration
