The Future of the Cognitive Revolution David Johnson,Christina Erneling,1997-04-24 The basic idea of the particular way of understanding mental phenomena that has inspired the cognitive revolution is that as a result of certain relatively recent intellectual and technological innovations informed theorists now possess a more powerfully insightful comparison or model for mind than was available to any thinkers in the past The model in question is that of software or the list of rules for input output and internal transformations by which we determine and control the workings of a computing machine s hardware Although this comparison and its many implications have dominated work in the philosophy psychology and neurobiology of mind since the end of the Second World War it now shows increasing signs of losing its once virtually unquestioned preeminence Thus we now face the question of whether it is possible to repair and save this model by means of relatively inessential tinkering or whether we must reconceive it fundamentally and replace it with something different In this book twenty eight leading scholars from diverse fields of cognitive science linguistics psychology neurophysiology and philosophy present their latest carefully considered judgements about what they think will be the future course of this intellectual movement that in many respects has been a watershed in our contemporary struggles to comprehend that which is crucially significant about human beings Jerome Bruner Noam Chomsky Margaret Boden Ulric Neisser Rom Harre Merlin Donald among others have all written chapters in a non technical style that can be enjoyed and understood by an inter disciplinary audience of psychologists philosophers anthropologists linguists and cognitive scientists alike

The Handbook of Psycholinguistic and Cognitive Processes Jackie Guendouzi, Filip Loncke, Mandy J. Williams, 2011-01-07. This handbook includes an overview of those areas of cognition and language processing that are relevant to the field of communication disorders and provides examples of theoretical approaches to problems and issues in communication disorders. The first section includes a collection of chapters that outline some of the basic considerations and areas of cognition and language that underlie communication processing. A second section explains and exemplifies some of the influential theories of psycholinguistic cognitive processing and the third section illustrates theoretical applications to clinical populations. There is coverage of theories that have been either seminal or controversial in the research of communication disorders. Given the increasing multi-cultural workload of many practitioners working with clinical populations, chapters relating to bilingual populations are also included. The volume book provides a single interdisciplinary source where researchers and students can access information on psycholinguistic and cognitive processing theories relevant to clinical populations. A range of theories, models and perspectives are provided. The range of topics and issues illustrate the relevance of a dynamic interaction between theoretical and applied work and retains the complexity of psycholinguistic and cognitive theory for readers both researchers and graduate students whose primary interest is the field of communication disorders.

Cognitive Biases in Anxiety and Depression Paula Hertel, 2002. This special issue of *Cognition and Emotion* is dedicated to the phenomena of emotion-related biases in attention and remembering that are experienced by anxious and depressed people. Andrew Mathews and Colin MacLeod summarize their new research in using experimental methods to train anxiety-like biases in attention and interpretation. Elaine Fox, Riccardo Russo and Kevin Dutton report new experiments concerning delayed disengagement from threatening events in anxiety. Phil Watkins's article addresses the conditions for obtaining depression-related biases on indirect tests of memory. Depression-consistent biases in false recognition are reported by Rich Wenzlaff, Jo Meier and Danette Salas; these biases also characterized performance by

previously dysphoric students and suggest indirect measures of vulnerability to depression Prospective evidence that cognitive biases index vulnerability is described by Stephanie Rude and her colleagues In short the special issue contains a mixture of new findings with integrative review and suggestions for future directions in investigations of emotionally disordered cognition
