Kvietys, 2010 The microcirculation of the gastrointestinal tract is under the control of both myogenic and metabolic regulatory systems The myogenic mechanism contributes to basal vascular tone and the regulation of transmural pressure while the metabolic mechanism is responsible for maintaining an appropriate balance between O₂ demand and O₂ delivery In the postprandial state hydrolytic products of food digestion elicit a hyperemia which serves to meet the increased O₂ demand of nutrient assimilation Metabolically linked factors e g tissue pO₂ adenosine are primarily responsible for this functional hyperemia The fenestrated capillaries of the gastrointestinal mucosa are relatively permeable to small hydrolytic products of food digestion e g glucose yet restrict the transcapillary movement of larger molecules e g albumin This allows for the absorption of hydrolytic products of food digestion without compromising the oncotic pressure gradient governing

transcapillary fluid movement and edema formation The gastrointestinal microcirculation is also an important component of the mucosal defense system whose function is to prevent and rapidly repair inadvertent epithelial injury by potentially noxious constituents of chyme Two pathological conditions in which the gastrointestinal circulation plays an important role are ischemia reperfusion and chronic portal hypertension Ischemia reperfusion results in mucosal edema and disruption of the epithelium due in part to an inflammatory response e g increase in capillary permeability to macromolecules and neutrophil infiltration Chronic portal hypertension results in an increase in gastrointestinal blood flow due to an imbalance in vasodilator and vasoconstrictor influences on the microcirculation Table of Contents Introduction Anatomy Regulation of Vascular Tone and Oxygenation Extrinsic Vasoregulation Neural and Humoral Postprandial Hyperemia Transcapillary Solute Exchange Transcapillary Fluid Exchange Interaction of Capillary and Interstitial Forces Gastrointestinal Circulation and Mucosal Defense Gastrointestinal Circulation and Mucosal Pathology I Ischemia Reperfusion Gastrointestinal Circulation and Mucosal Pathology II Chronic Portal Hypertension Summary and Conclusions References Author Biography

International Clinics, 1919 *Diagnosis, Screening and Treatment of Abdominal,*

Thoracoabdominal and Thoracic Aortic Aneurysms Reinhart Grundmann, 2011-09-12 This book considers mainly diagnosis screening surveillance and treatment of abdominal thoracoabdominal and thoracic aortic aneurysms It addresses vascular and cardiothoracic surgeons and interventional radiologists but also anyone engaged in vascular medicine The high mortality of ruptured aneurysms certainly favors the recommendation of prophylactic repair of asymptomatic aortic aneurysms AA and therewith a generous screening However the comorbidities of these patients and their age have to be kept in mind if the efficacy and cost effectiveness of screening and prophylactic surgery should not be overestimated The treatment

recommendations which will be outlined here have to regard on the one hand the natural course of the disease the risk of rupture and the life expectancy of the patient and on the other hand the morbidity and mortality of the prophylactic surgical intervention The book describes perioperative mortality after endovascular and open repair of AA long term outcome after repair and the cost effectiveness of treatment

Pathophysiology of Electrolyte and Renal Disorders H. David Humes,1986

Portal Hypertension Kunio Okuda,Jean-Pierre Benhamou,2013-11-09 Portal hypertension is the abnormal pathophysiologic state that develops in liver cirrhosis and certain other disorders with characteristic clinical and hemodynamic features There has been great progress in our understanding and management of portal hypertension particularly in the diagnostic and therapeutic approaches The so called Banti's syndrome a disorder whose existence had long been questioned is now a well defined portal hypertensive disease The recently introduced Doppler flowmetry is currently yielding new information on portal hemodynamics Endoscopic sclerotherapy and beta blockers have come to be widely used in the management and prevention of variceal bleeding In spite of all these advances a number of unsolved questions remain such as whether sclerotherapy pharmacotherapy or surgery is warranted for prevention of bleeding which is more effective as an elective treatment the surgical or endoscopic approach and whether surgical portacaval shunt should be totally replaced by selective shunt operations These new developments and problems are clearly and comprehensively described and discussed by the foremost authorities in 44 chapters which are divided into five sections 1 Pathophysiology 2 Hemodynamic Investigations 3 Imaging Investigations 4 Clinical and Pathological Features and 5 Esophageal and Gastrointestinal Bleeding The primary goal of this monograph to provide a framework of pathophysiology of portal hypertension with authoritative descriptions of the clinical and laboratory manifestations of various portal hypertensive disorders has clearly been achieved by these excellent contributions
