Indurkar, Mr. Mohammad Zishan Ibrahim, Welcome to Advanced Pharmacology II MPL 201T This comprehensive textbook is designed to provide students with a deep understanding of advanced concepts in pharmacology focusing on various therapeutic agents and their mechanisms of action In this book we delve into the intricate molecular and cellular mechanisms underlying the pharmacological actions of a wide array of drugs From endocrine pharmacology to chemotherapy gastrointestinal pharmacology immunopharmacology and free radicals pharmacology each section offers detailed insights into the pharmacotherapy of various diseases The syllabus covers a broad spectrum of topics starting with Endocrine Pharmacology where we explore the molecular and cellular mechanisms of hormones such as growth hormone prolactin thyroid hormones insulin and sex hormones Additionally we examine drugs used in the treatment of endocrine disorders including anti thyroid drugs oral hypoglycemic agents oral contraceptives and corticosteroids Moving on to Chemotherapy we delve into the cellular and molecular mechanisms of antimicrobial agents including lactams aminoglycosides quinolones and macrolide antibiotics Furthermore we discuss antifungal antiviral and anti TB drugs along with strategies to combat drug resistance Oxford Textbook of Cancer Biology Francesco Pezzella, Mahvash Tavassoli, David J. Kerr, 2019-05-06 The study of the biology of tumours has grown to become markedly interdisciplinary

involving chemists statisticians epidemiologists mathematicians bioinformaticians and computer scientists alongside biologists geneticists and clinicians The Oxford Textbook of Cancer Biology brings together the most up to date developments from different branches of research into one coherent volume providing a comprehensive and current account of this rapidly evolving field Structured in eight sections the book starts with a review of the development and biology of multi cellular organisms how they maintain a healthy homeostasis in an individual and a description of the molecular basis of cancer development The book then illustrates as once cells become neoplastic their signalling network is altered and pathological behaviour follows It explores the changes that cancer cells can induce in nearby normal tissue the new relationship established between them and the stroma and the interaction between the immune system and tumour growth The authors illustrate the contribution provided by high throughput techniques to map cancer at different levels from genomic sequencing to cellular metabolic functions and how information technology with its vast amounts of data is integrated with traditional cell biology to provide a global view of the disease The effect of the different types of treatments on the biology of the neoplastic cells are explored to understand on the one side why some treatments succeed and on the other how they can affect the biology of resistant and recurrent disease The book concludes by summarizing what we know to date about cancer and in what direction our understanding of cancer is moving Edited by leading authorities in the field with an international team of contributors this book is an essential resource for scholars and professionals working in the wide variety of sub disciplines that make up today s cancer research and treatment community It is written not only for consultation but also for easy cover to cover reading
