HEALTH BEHAVIOR AS BASIC RESEARCH Health behavior is not a traditional discipline but a newly emerging interdisciplinary field It is still in the process of establishing its identity Few institutional or organizational structures i e departments and programs reflect it and few books and journals are directed at it The primary objective of this book is thus to identify and establish health behavior as an important area of basic research worthy of being studied in its own right As a basic research area health behavior transcends commitment to a particular behavior a specific illness or health problem or a single set of determinants One way of achieving this objective is to look at health behavior as an outcome of a range of personal and social determinants rather than as a set of risk factors or as targets for intervention strategies directed at behavioral change The book is thus organized primarily in terms of the size of the determinants of concern rather than in terms of specific health behaviors or specific health problems or conditions With the first part of the book establishing working definitions of health behavior and health behavior research as basic frameworks the second part moves from smaller to larger systems informing the reader about basic research that demonstrates how health behavior is determined by personal family social institutional and cultural factors These distinctions reflect some arbitrariness the family organizations and institutions for example are social units

Handbook of Health Behavior Research I David S. Gochman,1997-08-31 The primary objective of this Handbook is to provide statements about health behaviour research as a basic body of knowledge moving into the 21st century It is expected that the Handbook will remain in use and current through 2005 at least The Handbook presents a broad and representative selection of mid 1990s health behaviour findings and concepts in a single work While texts and books of readings are available in related areas such as health psychology medical anthropology medical sociology behavioural health behavioural risk factors and changing health behaviours none of these works was intended to address basic research generated knowledge of health behaviour and none was intended to transcend individual disciplines Accordingly none of these works presents a broad and representative spectrum of basic health behaviour research reflecting multidisciplinary activities One work with a title identical to this one but for one word the Handbook of Health Behaviour Change Shumaker et al 1990 deals almost exclusively with applications This Handbook thus presents the reader with the state of the art in health behaviour research something not found elsewhere

Environmental Stress Gary W. Public Health Reports ,1987 Policy Studies: Review Annual Bruce B. Zellner,2019-01-22 Every editor of the Policy Studies Review Annual brings a unique perspective to bear in selecting articles to be included This perspective reflects varying methodological and disciplinary judgments varying judgments on what the field of policy studies or policy analysis is and where it should be going and varying judgments regarding the quality of articles which are or claim to be in the field Because it is the objective to assemble a set of essays which are both interesting and topical there will be varying perspectives on these matters as well The volume clearly reflects the editors perspectives They are explicit about these judgments and perspectives and then let the content of the volume speak for itself First we are both economists As a result the general topics selected and the articles chosen under each topic tend to emphasize economics more than the other disciplines involved in the field of policy studies sociology psychology political science law and so on This emphasis is clearly seen by comparing the contents of volume I edited by Stuart Nagel a political scientist and volume II edited by Howard Freeman a sociologist with that of this volume Second the editors have a particular view of what policy studies or policy analysis is That view has several aspects In the first place they feel that the field of policy studies or policy analysis must define itself and this definition will develop as researchers do just what the title of the field says study or analyze policies A corollary of this view is that we place a low weight on papers which discuss the policy process or reforms in policy making relative to papers which analyze a policy a policy proposal or a problem which leads to calls for policy action
