Higher-Dimensions Dr. Martin Concoyle,2014-01-16 This book is an introduction to the simple math patterns used to describe fundamental stable spectral orbital physical systems represented as discrete hyperbolic shapes The containment set has many dimensions and these dimensions possess macroscopic geometric properties which are discrete hyperbolic shapes Thus

it is a description that transcends the idea of materialism i.e. it is higher dimensional and it can also be used to model a life form as a unified high dimension geometric construct which generates its own energy and which has a natural structure for memory where this construct is made in relation to the main property of the description being the spectral properties of both material systems and of the metric spaces that contain the material systems where material is simply a lower dimension metric space and where both material components and metric spaces are in resonance with the containing space

Planting the Seeds of Algebra, PreK-2 Monica Neagoy, 2012-04-20 Help young minds explore algebraic concepts This book shows teachers how to create a strong foundation in algebra for very young children Using in depth math explorations the author unpacks step by step the hidden connections to higher algebra Each exploration contains an elegantly simple grade banded lesson on addition subtraction patterns and odd and even numbers followed by a discussion of the lesson's algebra connections as well as suggestions for additional problems to explore Throughout readers will find Clear explanations of algebraic connections Specific strategies for teaching the key ideas of algebra Lesson modifications for older or younger students An array of age appropriate problems and games

Treasures Hidden Within the Empire Martin Concoyle, 2014-10-25 This book is about a fundamental re organization of language which is used in regard to describing the stable many but few body spectral orbital systems from nuclei to planetary systems which now have no valid descriptions based on what are called the laws of physics The current description based on partial differential equations results in non linear non commutative and an improperly identified and improperly used random basis for physical description The result is that the properties of stability which are observed for these systems have not been describable in such a context On the other hand the already identified math patterns of geometrization along with E Noether's symmetries which allow the stable set of discrete hyperbolic shapes to be identified with energy spaces as well as the many dimensional structure in which these stable shapes of any size are defined as identified by D Coxeter are patterns which can be used to form a new context for physical description This is what this book is about forming such a new context wherein the stable many but few body spectral system is formulated and accurately described i.e. it is solved In such a new context partial differential equations come to play a subordinate role to stable shapes and their relation to defining a finite stable spectral set which is a property of the new many dimensional containment set a property which determines which stable patterns can exist But there are many social forces which oppose such a discussion These opposing social forces are also discussed

Mathematics Classrooms in Twelve Countries David Clarke, Christine Keitel, Yoshinori Shimizu, 2006 The Learner's Perspective Study aims to juxtapose the observable practices of the classroom and the meanings attributed to those practices by classroom participants The LPS research design documents sequences of at least ten lessons using three video cameras supplemented by the reconstructive accounts of

classroom participants obtained in post lesson video stimulated interviews and by test and questionnaire data and copies of student written material In each participating country data generation focuses on the classrooms of three teachers identified by the local mathematics education community as competent and situated in demographically different school communities within the one major city The large body of complex data supports both the characterisation of practice in the classrooms of competent teachers and the development of theory

Teaching and Learning Patterns in School Mathematics Ferdinand Rivera, 2014-07-08 This book synthesizes research findings on patterns in the last twenty years or so in order to argue for a theory of graded representations in pattern generalization While research results drawn from investigations conducted with different age level groups have sufficiently demonstrated varying shifts in structural awareness and competence which influence the eventual shape of an intended generalization such shifts however are not necessarily permanent due to other pertinent factors such as the complexity of patterning tasks The book proposes an alternative view of pattern generalization that is one that is not about shifts or transition phases but graded depending on individual experiences with target patterns The theory of graded representations involving pattern generalization offers a much more robust understanding of differences in patterning competence since it is sensitive to varying levels of entry into generalization Empirical evidence will be provided to demonstrate this alternative view which is drawn from the author's longitudinal work with elementary and middle school children including several investigations conducted with preservice elementary majors Two chapters of the book will be devoted to extending pattern generalization activity to arithmetic and algebraic learning of concepts and processes The concluding chapter addresses the pedagogical significance of pattern learning in the school mathematics curriculum
