Patterns Of Development Resources Policy And Economic Growth:

Patterns of Development Richard M. Auty, 1995 This authoritative new study provides a unique comparative analysis of postwar economic performance within the developing world Using the most up to date statistics it explains the diverging economic achievements of five main types of developing country Richard Auty focuses on internal policies and particularly on the impact of natural resource endowment on policy choice The tendency for well endowed countries to underperform in relation to their potential is noted and explained in terms of the emerging resource curse thesis The author argues persuasively that economic policies which secure rapid and equitable per capita economic growth can now be identified As a result priority is now being placed on environmentally sustainable development and political pluralism Within this broad thesis the book pursues five central themes rural neglect income inequality hyperurbanization unequal terms of trade and the role of government in the development process Each theme is discussed with reference to one of the five country types noting the key implications for the other four Blending economic environmental and socio political perspectives Patterns of Development offers a fresh approach to economic development and will be welcomed by those seeking an accessible and up to date introduction to the subject

Resource Abundance and Economic Development R. M. Auty, 2001-06-28 Since the 1960s the per capita incomes of the resource poor countries have grown significantly faster than those of the resource abundant countries In fact in recent years economic growth has been inversely proportional to the share of natural resource rents in GDP so that the small mineral driven economies have performed least well and the oil driven economies worst of all Yet the mineral driven resource rich economies have high growth potential because the mineral exports boost their capacity to invest and to import Resource Abundance and Economic Development explains the disappointing performance of resource abundant countries by extending the growth accounting framework to include natural and social capital The resulting synthesis identifies two contrasting development trajectories the competitive industrialization of the resource poor countries and the staple trap of many resource abundant countries The resource poor countries are less prone to policy failure than the resource abundant countries because social pressures force the political state to align its interests with the majority poor and follow relatively prudent policies Resource abundant countries are more likely to engender political states in which vested interests vie to capture resource surpluses rents at the expense of policy coherence A longer dependence on primary product exports also delays industrialization heightens income inequality and retards skill accumulation Fears of Dutch disease encourage efforts to force industrialization through trade policy to protect infant industry The resulting slow maturing manufacturing sector demands transfers from the primary sector that outstrip the natural resource rents and sap the competitiveness of the economy The chapters in this collection draw upon historical analysis and models to show that a growth collapse is not the inevitable outcome of resource abundance and that policy counts Malaysia a rare example of successful resource abundant development is contrasted with Ghana Bolivia Saudi Arabia Mexico and Argentina which all

experienced a growth collapse The book also explores policies for reviving collapsed economies with reference to Costa Rica South Africa Russia and Central Asia It demonstrates the importance of initial conditions to successful economic reform
