Prospects For Fusion Power:

Prospects for Fusion Power Stephen Odell Dean, 1981 *An Assessment of the Prospects for Inertial Fusion Energy* National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Board on Physics and Astronomy, Committee on the Prospects for Inertial Confinement Fusion Energy Systems, 2013-07-05 The potential for using fusion energy to produce commercial electric power was first explored in the 1950s Harnessing fusion energy offers the prospect of a nearly carbon free energy source with a virtually unlimited supply of fuel Unlike nuclear fission plants appropriately designed fusion power plants would not produce the large amounts of high level nuclear waste that requires long term disposal Due to these prospects many nations have initiated research and development R compares the various technical approaches to IFE and identifies the scientific and engineering challenges associated with developing inertial confinement fusion ICF in particular as an energy source It also provides guidance on an R D roadmap at the conceptual level for a national program focusing on the design and construction of an inertial fusion energy demonstration plant Fusion Power Development and Commercial Prospects Atomic Industrial Forum. Committee on Fusion, 1976 *Panel Discussion on Prospects for Fusion Power*, 1986 Although substantial progress is made every year in fusion research the projected time to realize the ultimate goal of commercial fusion always seems to be 25 to 30 years away This shifting schedule reflects the underlying difficulty of developing fusion Every new technology improves the prospects for success yet as each fusion mountain is scaled it serves mainly to bring a better view of the next mountain Two questions are considered 1 why are so many configurations studied and 2 what constitutes an economic power density

The Prospects of Fusion Power W. Gough, B. Eastlund, 1971 **The Five-year Outlook: Source materials** National Science Foundation (U.S.), 1980 *The Five-year Outlook*, 1980 **Prospects for Tokamak Fusion Reactors**, 1995 This paper first reviews briefly the status and plans for research in magnetic fusion energy and discusses the prospects for the tokamak magnetic configuration to be the basis for a fusion power plant Good progress has been made in achieving fusion reactor level deuterium tritium D T plasmas with the production of significant fusion power in the Joint European Torus up to 2 MW and the Tokamak Fusion Test Reactor up to 10 MW tokamaks Advances on the technologies of heating fueling diagnostics and materials supported these achievements The successes have led to the initiation of the design phases of two tokamaks the International Thermonuclear Experimental Reactor ITER and the US Toroidal Physics Experiment TPX ITER will demonstrate the controlled ignition and extended burn of D T plasmas with steady state as an ultimate goal ITER will further demonstrate technologies essential to a power plant in an integrated system and perform integrated testing of the high heat flux and nuclear components required to use fusion energy for practical purposes TPX will complement ITER by testing advanced modes of steady state plasma operation that coupled with the developments in ITER will lead to an optimized demonstration power plant **Hydrogen-future Fuel** Neil A.
