Abstract

Sainsbury (2005) and (2009) offers a theory of empty names that purports to account for the content and truth-value of all utterances involving them. The goal is to do this while offering a homogenous semantic treatment: both empty and non-empty names make the same kind of contribution to truth-values. The account is based on a new theory of reference that purports to be an alternative among non-descriptivist accounts. According to the new theory, there is reference even without referents. In this paper I argue that the theory does not offer a homogeneous semantics for names and that, thus, it fails to offer a more satisfactory alternative to the theories already available. I conclude by briefly describing a way in which a theory could in fact offer such homogeneous semantics for names via a cognitive theory of empty names.

Keywords: homogeneous semantics, truth conditions, cognitivism.

1. Desiderata

Reimer (2001a) identifies two problems related to the ordinary use of empty names. On the one hand, speaker intuitions support the idea that statements using empty names are meaningful and truth-evaluable. Reimer dubs this “the intuition
