Securing Water and Wastewater Systems Robert M. Clark,Simon Hakim,2013-10-04 Urban water and wastewater systems have an inherent vulnerability to both manmade and natural threats and disasters including droughts earthquakes and terrorist attacks It is well established that natural disasters including major storms such as hurricanes and flooding can effect water supply security and integrity Earthquakes and terrorist attacks have many characteristics in common because they are almost impossible to predict and can cause major devastation and confusion Terrorism is also a major threat to water security and recent attention has turned to the potential that these attacks have for disrupting urban water supplies There is a need to introduce the related concept of Integrated Water Resources Management which emphasizes linkages between land use change and hydrological systems between ecosystems and human health and between political and scientific aspects of water management An expanded water security agenda should include a conceptual focus on vulnerability risk and resilience an emphasis on threats shocks and tipping points and a related emphasis on adaptive management given limited predictability Internationally concerns about water have often taken a different focus and there is also a growing awareness including in the US that water security should include issues related to quantity climate change and biodiversity impacts in addition to terrorism This presents contributions from a group of internationally recognized experts that attempt to address the four areas listed above and includes suggestions as to how to deal with related problems It also addresses the new and potentially growing issue of cyber attacks against water and waste water infrastructure including descriptions of actual attacks making it of interest to scholars and policy makers concerned with protecting the water supply

ecosystems recovery Coping with non point pollution takes the form of both policy intervention and technology development Likewise it is recognized that irrigation efficiency varies across countries influenced by both technology and supporting adoption policies Countries that lead in irrigation technology and supporting policies have certain traits in common They face very high scarcity and are pushed to find innovative solutions both technical and policy related The recent multibillion investments in irrigation technologies in Spain and similar proposals in Australia for example highlight the potential of irrigation technologies to cope with scarcity and water quality degradation This book reviews all of the above issues presents experiences in selected countries and assesses the degree of success of alternative policies for coping with non point water pollution and improving irrigation efficiency

Revisiting Integrated Water Resources Management Cecilia Tortajada, 2017-10-02 The book includes seventeen excellent

researched and documented papers that reflect the diversity of thought ideas and experiences related to IWRM. They draw from an extensive inclusive and geographically representative range of theoretical propositions and practical examples. These include the implementation status of the IWRM concept at local basin regional and national levels, its appropriateness for the twenty-first century, main implementation gaps from the institutional legal policy governance management and technical viewpoints, the likelihood that IWRM's entrenchment in laws regulations and policies has led to smoother implementation, and the reasons why that has been the case. Reflexions on whether the attention given to IWRM is pushing other alternatives to the policy periphery and the new conceptual constructions that can be put forward for discussion in the international arena. For the development and water communities, it is imperative to debate and reach towards more illustrative conclusions regarding whether the promotion of the IWRM concept and its actual implementation status have been beneficial for development and how the notion could evolve to achieve this end. In-depth objective and constructive discussions, arguments, proposals, and ideas are put forward for analysis by all interested parties. The book has the objective of fostering scholarly exchange, encouraging intellectual debate, and promoting the advancement of knowledge and understanding of IWRM as a concept as a goal per se and as a strategy towards development goals.
