

agement plan is adopted. In some cases, the development of water supply from coastal rivers is contingent on avoiding adverse environmental impacts. This may involve withdrawing no water from streams during periods of low flow. In such cases, a conjunctive use scheme may be the only way to increase regional safe yield with moderate cost.

These circumstances illustrate some functional advantages of regionalization, which, with scale and other operational advantages described by the author, cause it to be considered more and more. It may be added that regionalization may not always be in the public interest. It may be advocated for quite different reasons, including the desire of ambitious managers, either of public or investor-owned systems, to increase the scale of the operations under their control.

Closure by Neil S. Grigg,³ Fellow, ASCE

In this closure I would like to address the issue of water management integration. Its complexity can be fathomed by using a classification system for examples of water management integration. Whipple's discussion adds interesting examples of regionalization to the original paper. New Jersey is an apparent leader in innovating with regionalization concepts in water-supply management, and I would like to comment later on how the examples fit into different categories of water management integration.

As discussed in the original paper, the concept of regionalization is closely related to the term *integration* as it relates to the water-supply industry. The definition presented in the original paper was "regionalization in water management is integration or cooperation on a regional basis." As examples such as those cited by Whipple emerge, it seems useful to classify water management integration, and the following five types are apparent: political, functional, hydrologic-ecologic, geographic, and disciplinary. Using these classifications can provide illumination for the complex subject of integration in water management.

Political integration can be either horizontal, where agencies at the same level of government integrate efforts, or vertical, where agencies at different levels of government integrate efforts. Functional integration means to integrate the functions or purposes of water management. The term is closely related to multipurpose water management, depending on the degree of actual integration.

Hydrologic-ecologic integration in water management covers the hydrologic and biologic systems. For example, conjunctive management of ground and surface water is hydrologic integration. Managing water quantity and quality together, while basically an example of functional integration, also aims to manage aquatic ecological systems.

Privatization of Water Services in the United States National Research Council,Division on Earth and Life Studies,Water Science and Technology Board,Committee on Privatization of Water Services in the United States,2002-09-20

In the quest to reduce costs and improve the efficiency of water and wastewater services many communities in the United States are exploring the potential advantages of privatization of those services Unlike other utility services local governments have generally assumed responsibility for providing water services Privatization of such services can include the outright sale of system assets or various forms of public private partnerships from the simple provision of supplies and services to private design construction and operation of treatment plants and distribution systems Many factors are contributing to the growing interest in the privatization of water services Higher operating costs more stringent federal water quality and waste effluent standards greater customer demands for quality and reliability and an aging water delivery and wastewater collection and treatment infrastructure are all challenging municipalities that may be short of funds or technical capabilities For municipalities with limited capacities to meet these challenges privatization can be a viable alternative Privatization of Water Services evaluates the fiscal and policy implications of privatization scenarios in which privatization works best and the efficiencies that may be gained by contracting with private water utilities Multi-Stakeholder Platforms for Integrated Water Management Jeroen Warner,2016-09-17 As they provide a negotiating space for a diversity of interests Multi Stakeholder Platforms MSPs are an increasingly popular mode of involving civil society in resource management decisions This book focuses on water management to take a positive if critical look at this phenomenon Illustrated by a wide geographical range of case studies from both developed and developing worlds it recognizes that MSPs will neither automatically break down divides nor bring actors to the table on an equal footing and argues that MSPs may in some cases do more harm than good The volume then examines how MSPs can make a difference and how they might successfully co opt the public private and civil society sectors The book highlights the particular difficulties of MSPs when dealing with integrated water management programmes explaining how MSPs are most successful at a less complex and more local level It finally questions whether MSPs are or can be sustainable and puts forward suggestions for improving their durability

Rivers Lost, Rivers Regained Martin Knoll,Uwe Lubken,Dieter Schott,2017-06-13 Many cities across the globe are rediscovering their rivers After decades or even centuries of environmental decline and cultural neglect waterfronts have been vamped up and become focal points of urban life again hidden and covered streams have been daylighted while restoration projects have returned urban rivers in many places to a supposedly more natural state This volume traces the complex and winding history of how cities have appropriated lost and regained their rivers But rather than telling a linear

story of progress the chapters of this book highlight the ambivalence of these developments The four sections in Rivers Lost Rivers Regained discuss how cities have gained control and exerted power over rivers and waterways far upstream and downstream how rivers and floodplains in cityscapes have been transformed by urbanization and industrialization how urban rivers have been represented in cultural manifestations such as novels and songs and how more recent strategies work to redefine and recreate the place of the river within the urban setting At the nexus between environmental urban and water histories Rivers Lost Rivers Regained points out how the urban river relationship can serve as a prime vantage point to analyze fundamental issues of modern environmental attitudes and practices *Water Policy in Tennessee*, 1983

Transboundary Water Resources Management Jacques Ganoulis, Lucien Duckstein, Peter Literathy, Istvan Bogardi, 2013-04-17 In a world facing a growing water crisis conflicts regarding water sharing and environmental issues are expected to grow especially in transboundary river basins where 40% of the world's population lives This book represents one of the first attempts to bring together methodologies and analytical tools from socio economic international policy engineering and water management specialists dealing with transboundary water resources The book is divided into three parts Part I introduces state of the art concepts in institutional policy and conflict analysis Part II presents engineering approaches and models for transboundary water management and conflict resolution Part III analyzes cases in international river basins and enclosed seas *The Routledge Companion to Network Industries* Matthias Finger, Christian Jaag, 2015-11-19 In recent decades network industries around the world have gone through periods of de and re regulation With vast amounts of sometimes conflicting research carried out into specific network industries the time has come for a critical overarching assessment of this entire industry in order to provide a platform of understanding to aid future research and practice This comprehensive resource provides an orientation for academics policy makers and managers as to the main economic regulatory and commercial challenges in the network industries The book is split into sections covering market policy regulation management perspectives whilst all of the key network industries are covered including energy transport water and telecommunications Overseen by world class Editors and experts in the field this interdisciplinary resource is essential reading for students and researchers in international business industrial economics and the industries
