Regulation Without the State John Blundell, Colin Robinson, 2000 The rising tide of government regulation in most countries is provoking a reconsideration of the extent to which the state should lay down rules for others Self regulation and other forms of voluntary rule setting are being examined as substitutes for regulation by government Readings 52 begins with a paper by John Blundell and Colin Robinson which analyses the forces behind government regulation its shortcomings and the scope for voluntary regulation Seven papers by distinguished commentators on regulation then examine Blundell and Robinson's conclusions

Regulating Financial Markets George J. Benston, 1998 Financial services financial firms and financial markets are regulated to a greater extent than most other products and services In this radical book Professor George Benston provides a comprehensive critique of the justifications for financial services regulation and provides an innovative proposal for reform Executive Summary Financial services

financial firms and financial markets are regulated to a greater extent than most other products and services. Financial service regulation goes back centuries. It provides benefits to governments for example from direct and indirect taxation of banks and to regulated financial institutions which gain where entry is restricted. Consumer protection is a common reason given for financial regulation. But consumers in financial markets are probably less subject to fraud, misrepresentation, discrimination and information asymmetry than consumers of other products. Concern about negative externalities, costs born by others, is another argument for regulation. However, on examination it is clear there are few genuine externalities. Regulations on externality grounds is justified only for financial institutions which hold government insured deposits for insurance companies which provide government mandated non contracting third party insurance for instance for cars and for companies which underwrite long term life insurance and annuities. Financial regulation incurs costs borne by consumers and taxpayers which probably exceed the benefits they receive. There are substantial unintended costs such as reduced diversification of financial institutions and the absence of less costly and more innovative products because of restrictions on entry to financial markets. An optimal regulatory system for banks would involve substantial capital requirements, periodic reporting of assets, liabilities and capital and a structured early intervention system for the authorities. For government mandated third party liability insurance, life insurance and annuities, insurance companies should be subject to capital requirements similar to those for banks. If governments wish to protect consumers of financial products, the best procedure is to establish an Ombudsman to which consumers who feel they have been mistreated can go. The proposed regulatory system would be almost costless to taxpayers, the regulated companies and consumers of their products and services. Compared with existing regimes, it has the great advantage of not restricting entry to financial markets nor the introduction of new products.

Money and the Market Kevin Dowd, 2013-12-16. Kevin Dowd asserts that state intervention into financial and monetary systems has failed and that we would be better off if financial markets were left to regulate themselves. This collection will appeal to students, researchers and policy makers in the monetary and financial area.

Regulating Private Pension Schemes International Network of Pensions Regulators and Supervisors. Conference, Organisation for Economic Co-operation and Development. Private Pensions and Insurance Unit, 2002. The issue of providing appropriate financial security for retirement is of growing importance for both OECD member and non member countries and the approaches adopted to implement the necessary reforms vary depending on each country's economic, social and demographic environment. Increasingly, however, reform programmes involve the establishment or extension of private pension arrangements. This book contains a selection of papers presented at a meeting in April 2001 of the International Network of Pension Regulators and Supervisors, INPRS and the OECD to discuss the key policy implications arising from the growth of private pension schemes.  Europe is on the brink of an unprecedented experiment in 1998 a monetary reform on a Continental scale a merging of
 currencies among sovereign states a fusing of the economic policies of diverse central banks The likes of this kind of union
 has never been witnessed in history unless by imposition of a superior nation holding sway over subject societies The
 reactions of Europeans before this huge gamble are predictably mixed This book attempts to reflect on the true reasons and
 foreseeable consequences of a European Monetary Union and on the best course to take for the welfare of Europe
