Regulators Revenge The Future Of Telecommunications Deregulation:

Regulators' Revenge Tom W. Bell, Solveig Singleton, 1998 The Telecommunications Act of 1996 has failed to fulfill its deregulatory promise The act in many cases has replaced regulated monopoly with eerily similar regulated competition Only markets that are truly free will innovate and remain healthy in the long run These essays suggest how to move toward free markets in telecommunications Communications Deregulation and FCC Reform: Finishing the Job Jeffrey A.

Eisenach, Randolph J. May, 2012-12-06 Communications markets have made much progress towards competition and deregulation in recent years However it is increasingly clear in the age of the Internet and the digital revolution that much more needs to be done and that new approaches both at the Federal Communications Commission and in Congress will be required to complete the task In this volume the Progress and Freedom Foundation presents nine papers by communications policy experts and government policymakers that show how to finish the job of deregulating communications markets and reforming the FCC The Telecommunications Act of 1996 was a landmark piece of legislation for an industry moving from a monopoly orientation towards competition but additional steps are needed to complete the process of implementing the pro competitive deregulatory vision of the act Bringing together a group of the caliber represented in this book makes possible the best recommendations about the exact nature of those necessary changes In this volume the most difficult and politically charged hot button issues involving local and long distance competition universal service spectrum allocation program content regulation and the public interest doctrine are confronted head on As importantly the authors recommend specific reform proposals to be considered by the Federal Communications Commission and Congress The ideas contained in the experts essays were presented and debated at a conference hosted by The Progress Freedom Foundation which was held in Washington DC on December 8 2000 The Progress Freedom Foundation studies the impact of the digital revolution and its implications for public policy It conducts research in fields such as electronic commerce telecommunications and the impact of the Internet on government society and economic growth It also studies issues such as the need to reform government regulation especially in technology intensive fields such as medical innovation energy and environmental regulation

Deregulation! Janice A. Beecher, Scott J. Rubin, 2000 Resolving Disputes in Telecommunications R.U.S. Prasad, 2010-11-03 The Indian telecommunication sector has seen far reaching changes in the last two decades due to increasing globalization rapid pace of technological innovations and rising consumer demands Myriad and complex problems have arisen as a result of these developments Though attempts have been made to tackle these issues at the levels of policymaking regulation and dispute settlement these have not been able to keep pace with the rapidly changing scenario often leading to paralysing dispute situations In this important and timely volume the author focuses on the so far neglected area of dispute resolution The work delves into the disputes arising from increased competition heightened consumer expectations and the need to balance competition and universal service obligation Beginning with the theoretical

underpinnings of dispute resolution the author analyses various methods such as regulatory based adjudication alternative dispute resolution ADR and resolution by sector specific tribunals He compares the management and disputes resolution practices followed in countries such as the UK France Germany Denmark the USA and Canada to arrive at a framework for a more effective mode of dispute resolution

Health Networks Thomas P. Weil,2001 Investigating ways to improve U S health care networks *Copyright Unbalanced* Reihan Salam,Patrick Ruffini,David G. Post,Timothy B. Lee,Eli Dourado,Christina Mulligan,Tom W. Bell,2012 The Constitution gives Congress the power to establish copyright to promote the Progress of Science and useful Arts This requires Congress to engage in a delicate balancing act giving authors enough protection that they will be motivated to create expressive works but not so much that it hampers innovation and public access to information Yet over the past half century Congress has routinely shifted the balance in only one direction away from access and freedom and toward greater privileges for organized special interests Conservatives and libertarians who are naturally suspicious of big government should be skeptical of an ever expanding copyright system They should also be skeptical of the recent trend toward criminal prosecution of even minor copyright infringements of the growing use of civil asset forfeiture in copyright enforcement and of attempts to regulate the Internet and electronics in the name of piracy eradication Copyright Unbalanced is not a moral case for or against copyright it is a pragmatic look at the excesses of the present copyright regime and of proposals to expand it further It is a call for reform to roll back the expansions and reinstate the limits that the Constitution s framers placed on copyright Published by the Mercatus Center at George Mason University

Welfare for Politicians? John Samples,2005-03-25 Candidates and parties need money to fight election campaigns In the United States this money comes largely from individuals and groups not the government and taxpayers Many people criticize such private financing of politics Private donations they claim advance special interests thereby corrupting politics and government Some critics argue that government should ban private campaign contributions in favor of financing by taxpayers Since public money comes from everyone they reason it actually comes from no one which cuts out corruption before it begins But taxpayer financing of campaigns such as the income tax check off for presidential campaigns has its share of critics who point out that public financing has often come up short in terms of increasing electoral competition Another major problem concerns the taxpayers who are called on to fund these programs Taxpayer financing in polls and in reality lacks public support The public resists giving welfare to politicians to run their campaigns In Welfare for Politicians leading analysts from both sides of the public financing debate address the history of these programs including the successes and failures of the financing system for presidential elections They also take up recent innovations in the states including models of full taxpayer financing passed by initiative in Arizona Maine and Massachusetts Together they offer a groundbreaking analysis of the problem and an instructive guide to future reform

The Future of Ideas Lawrence Lessig, 2002-11-12 The Internet revolution has come Some say it has gone In The Future of Ideas Lawrence Lessig explains how the revolution has produced a counterrevolution of potentially devastating power and effect Creativity once flourished because the Net protected a commons on which widest range of innovators could experiment But now manipulating the law for their own purposes corporations have established themselves as virtual gatekeepers of the Net while Congress in the pockets of media magnates has rewritten copyright and patent laws to stifle creativity and progress Lessig weaves the history of technology and its relevant laws to make a lucid and accessible case to protect the sanctity of intellectual freedom He shows how the door to a future of ideas is being shut just as technology is creating extraordinary possibilities that have implications for all of us Vital eloquent judicious and forthright The Future of Ideas is a call to arms that we can ill afford to ignore

Intellectual Privilege Tom W. Bell, 2014-04-14 A consensus has recently emerged among academics and policymakers that US copyright law has fallen out of balance Lawmakers have responded by taking up proposals to reform the Copyright Act But how should they proceed This book offers a new and insightful view of copyright marking the path toward a world less encumbered by legal restrictions and yet richer in art music and other expressive works Two opposing viewpoints have driven the debate over copyright policy One side questions copyright for the same reasons it questions all restraints on freedoms of expression and dismisses copyright like other forms of property as a mere plaything of political forces The opposing side regards copyrights as property rights that deserve like rights in houses cars and other forms of property the fullest protection of the law Each of these viewpoints defends important truths Both fail however to capture the essence of copyright In Intellectual Privilege Tom W Bell reveals copyright as a statutory privilege that threatens our natural and constitutional rights From this fresh perspective come fresh solutions to copyright's problems Published by the Mercatus Center at George Mason University

What's Yours Is Mine Adam D. Thierer, Clyde Wayne Crews, 2003-05-25 In What's Yours Is

Mine Open Access and the Rise of Infrastructure Socialism authors Adam Thierer and Clyde Wayne Crews Jr examine the hazards of mandatory open access a trend in which hyper regulatory bureaucrats and central planners are increasingly commanding technology companies and industry sectors to share networks facilities or specific technologies with rivals Telephone and cable companies wireless carriers electric utilities the Visa Mastercard network Microsoft s Windows operating system all these and more have been targets of demands for forced access Although supporters claim that open access is pro competitive the opposite is true Forced access policies inevitably mean price and quality controls stagnation increased litigation and a crippling of innovation Genuine competition requires that firms have the ability to exclude rivals Government seizure of existing networks and technologies on behalf of rivals means that next generation technologies will not be created by those rivals or the incumbents The recent decision by the FCC to continue such micro management of local telecom markets illustrates this principle regulators have opted to continue to require sharing of local telephone lines and switches despite the fact that those rules have decimated innovation and investment in the U S telecom market The key message for policymakers hoping for a high tech renaissance Competition in the creation of networks is as important as competition in the goods and services that get sold across those networks Competition innovation and consumers will suffer if forced sharing policies are not abandoned In today s world of increasing global communications and digital technologies What s Yours Is Mine makes an urgently needed pro consumer case for laissez faire in the evolution of technology industries
