Relations Between Water and Soil T. J. Marshall, 1967 **Water Relations of Plants and Soils** Paul J. Kramer, John S. Boyer, 1995-07-17 Water Relations of Plants and Soils successor to the seminal 1983 book by Paul Kramer covers the entire field of water relations using current concepts and consistent terminology Emphasis is on the interdependence of processes including rate of water absorption rate of transpiration resistance to water flow into roots soil factors affecting water availability New trends in the field such as the consideration of roots rather than leaves as the primary sensors of water stress are examined in detail Addresses the role of water in the whole range of plant activities Describes molecular mechanisms of water action in the context of whole plants Synthesizes recent scientific findings Relates current concepts to agriculture and ecology Provides a summary of methods **The Water-relation Between Plant and Soil** Burton Edward Livingston, Lon Adrian Hawkins, Howard Edward Pulling, 1915 Principles of Soil and Plant Water Relations M.B. Kirkham, 2014-04-21 Principles of Soil and Plant Water Relations 2e describes the principles of water relations within soils followed by the uptake of water and its subsequent movement throughout and from the plant body This is presented as a progressive series of physical and biological interrelations even though each topic is treated in detail on its own The book also describes equipment used to measure water in the soil plant atmosphere system At the end of each chapter is a biography of a scientist whose principles are discussed in the chapter In addition to new information on the concept of celestial time this new edition also includes new chapters on methods to determine sap flow in plants dual probe heat pulse technique to monitor water in the root zone Provides the necessary understanding to address advancing problems in water availability for meeting ecological requirements at local regional and global scales Covers plant anatomy an essential component to understanding soil and plant water relations **Relation of Shallow Water Quality in the Central Oklahoma Aquifer to Geology, Soils, and Land Use** Alan Rea, Scott C. Plant-Water Relations for Sustainable Agriculture Thorsten M. Knipfer, Italo F. Cuneo, 2022-09-02

The Inter-Relationship Between Irrigation, Drainage and the Environment in the Aral Sea Basin M.G. Bos, 2012-12-06 The irrigated area in the Aral Sea basin totals about 7.5 million hectare Part of the water supplied to this area is consumed by the irrigated crop the remainder of the supplied water drains to the groundwater basin to downstream depressions or back to the rivers During its use however this drained part of the water accumulates salts and chemicals The disposal of this polluted water causes a variety of environmental problems If the percentage consumed water of the total water supply to an irrigated area the so called overall consumed ratio can be increased less water needs to be drained This alleviates part of the related environmental problems Further if the overall consumed ratio for the above 7.5 million hectare is improved less water needs to be diverted from the rivers Hence more water can flow towards the Aral Sea As mentioned above part of the non consumed irrigation water drains to the groundwater basin Commonly the natural discharge capacity of this basin is insufficient to handle this imported water As a result the groundwater table rises towards the land surface causing waterlogging In semi arid zones this waterlogging triggers a soil salinity problem resulting to a significant reduction in crop yields The artificial increase of the discharge capacity and lowering of the groundwater table solves the soil salinity problem
