Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of the literature concerning all aspects of astronomy, astrophysics, and their border fields. It is devoted to the recording, summarizing, and indexing of the relevant publications throughout the world. *Astronomy and Astrophysics Abstracts* is prepared by a special department of the Astronomisches Rechen Institut under the auspices of the International Astronomical Union. Volume 34 records literature published in 1983 and received before February 17, 1984. Some older documents, which we received late and which are not surveyed in earlier volumes, are included too. We acknowledge with thanks contributions of our colleagues all over the world. We also express our gratitude to all organizations, observatories, and publishers which provide us with complimentary copies of their publications. Starting with Volume 33, all the recording, correction, and data processing work was done by means of computers. The recording was done by our technical staff members Ms Helga Ballmann, Ms Mona El Choura, and Ms Monika Kohl. Mr Martin Schlotelburg and Mr Ulrich Oberall supported our task by careful proofreading. It is a pleasure to thank them all for their encouragement.

General Relativity; an Einstein Centenary Survey Part 2 Hawking, Stephen W. Hawking, W. Israel, 2010

Einstein and the Changing Worldviews of Physics Christoph Lehner, Jürgen Renn, Matthias Schemmel, 2012-02-02

This volume reviews conceptual conflicts at the foundations of physics now and in the past century. The focus is on the conditions and consequences of Einstein's pathbreaking achievements that sealed the decline of the classical notions of space, time, radiation, and matter and resulted in the theory of relativity. Particular attention is paid to the implications of conceptual conflicts for scientific views of the world at large, thus providing the basis for a comparison of the demise of the mechanical worldview at the turn of the 20th century with the challenges presented by cosmology at the turn of the 21st century. Throughout the work, Einstein's contributions are not seen in isolation but instead set into the wider intellectual context of dealing with the problem of gravitation in the twilight of classical physics; the investigation of the historical development is carried out with a number of epistemological questions in mind, concerning in particular the transformation process of knowledge associated with the changing worldviews of physics.

,1994 Exact Solutions and Scalar Fields in Gravity Alfredo Macías,Jorge L. Cervantes-Cota,Claus Lämmerzahl,2007-05-08
 Divided into four parts this book covers recent developments in topics pertaining to gravity theories including discussions on the presence of scalar fields Part One is devoted to exact solutions in general relativity and is mainly concerned with the results of rotating null dust beams and fluids Also included is a panoramic vision of new research directions in this area which would require revising certain theorems and their possible extensions within gravity theories new aspects concerning the Ernst potentials double Kerr spacetimes and rotating configurations In particular there is a detailed discussion of totally symmetric and totally geodesic spaces in which a method for generating 2 1 dimensional solutions from 3 1 dimensional solutions is given Part Two deals with alternative theories of gravity all of which include scalar fields and gauge fields Here quantum and cosmological effects which arise from both gravity theories in four and higher dimensions and from metric affine theories are investigated Part Three is devoted to cosmological and inflationary scenarios Local effects such as the influence of scalar fields in protogalactic interactions numerical studies of the collapse of molecular cores as well as the inverse inflationary problem and the blue eigenvalue spectrum of it are considered Moreover the role of scalar fields as dark matter and quantum cosmology in the Bergman Wagoner and Gowdy theories together with the relation of the conformal symmetry and deflationary gas universe are likewise presented The last part of the book includes some mixed topics which are still in the experimental stage Among them are the foundation of the Maxwell theory a discussion on electromagnetic Thirring problems a note on the staticity of black holes with non minimally coupled scalar fields and a study of the Lorentz force free charged fluids in general relativity Thus this book is the most up to date comprehensive collection of papers on the subject of exact solutions and scalar fields in gravity and is a valuable tool for researchers in the area *Deserfest* Stanley Deser,James T. the field Every year some 80 to 100 participants from both mathematics and physics join to discuss new developments and to interchange ideas This volume contains contributions by selected speakers at the XXX meeting in 2011 as well as additional review articles and shows that the workshop remains at the cutting edge of ongoing research The 2011 workshop focussed on the works of the late Felix A Berezin 1931 1980 on the occasion of his 80th anniversary as well as on Bogdan Mielnik and Stanis aw Lech Woronowicz on their 75th and 70th birthday respectively The groundbreaking work of Berezin is discussed from today s perspective by presenting an overview of his ideas and their impact on further developments He was among other fields active in representation theory general concepts of quantization and coherent states supersymmetry and supermanifolds Another focus lies on the accomplishments of Bogdan Mielnik and Stanis aw Lech Woronowicz Mielnik s geometric approach to the description of quantum mixed states the method of quantum state manipulation and their important implications for quantum computing and quantum entanglement are discussed as well as the intricacies of the quantum time operator Woronowicz fruitful notion of a compact quantum group and related topics are also addressed
