Irradiation Embrittlement of Reactor

Pressure Vessels (RPVs) in Nuclear Power Plants Naoki Soneda, 2014-09-01 Reactor Pressure Vessels RPVs contain the fuel and therefore the reaction at the heart of nuclear power plants They are a life determining structural component if they suffer serious damage the continued operation of the plant is in jeopardy This book critically reviews irradiation embrittlement the main degradation mechanism affecting RPV steels and mitigation routes for managing the RPV lifetime Part I reviews RPV design and fabrication in different countries with an emphasis on the materials required their important properties and manufacturing technologies Part II then considers RVP embrittlement in operational nuclear power plants using different reactors Chapters are devoted to embrittlement in light water reactors including WWER type reactors and Magnox reactors Finally Part III presents techniques for studying embrittlement including irradiation simulation techniques microstructural characterisation techniques and probabilistic fracture mechanics Irradiation Embrittlement of Reactor Pressure Vessels RPVs in Nuclear Power Plants provides a thorough review of an issue that is central to the safety of nuclear power generation The book includes contributions from an international team of experts and will be a useful resource for nuclear plant operators and managers relevant regulatory and safety bodies nuclear metallurgists and other academics in this field Discusses reactor pressure vessel RPV design and the effect irradiation embrittlement can have the main degradation mechanism affecting RPVs Examines embrittlement processes in RPVs in different reactor types as well as techniques for studying RPV embrittlement

Ninth International Symposium on Environmental Degradation of Materials in Nuclear Power Systems Steve Bruemmer, Peter Ford, Gary Was, 2013-10-18 This collection presents an exchange of ideas among scientists and engineers about the economic and safety concerns surrounding environmentally induced materials problems which lead to nuclear power plant outages Scientists and engineers concerned with the environmental degradation processes corrosion mechanical and radiation effects present their latest results on such topics as life extension relicensing and materials problems associated with spent fuel storage and radioactive waste disposal This collection will be of interest to utility engineers reactor vendor engineers plant architect engineers researchers concerned with materials degradation and consultants involved in design construction and operation of water reactors
