Public Roads ,1997 An Evaluation of Asphalt-rubber Mixtures for Use in Pavement Systems Dale S. Decker,1979 The design and construction of airfield pavements have not been developed sufficiently to provide pavements that will not crack Cracking is a response to traffic and environmental conditions or to the construction material For many years rubber in several different forms has been added to asphalt with limited success in reducing pavement cracking This report reviews the efforts to control cracking by incorporating rubber and asphalt for application as membrane interlayers surface seal coats crack fillers and joint sealers The extensive literature review indicates that conflicting conclusions have been reached regarding varied applications of the asphalt rubber material Of the asphalt rubber products available those with high percentages of rubber 20 to 30 percent by weight appear to be the most promising for airfield pavements although the effectiveness of asphalt rubber in controlling or reducing pavement cracking has not been conclusively demonstrated No superiority of one asphalt rubber product was indicated in the literature Because of the danger of loose aggregate chips the literature indicates that chip seal applications should not be used on facilities where loose chips could be a problem Therefore the membrane interlayer is the only application of asphalt rubber that should be considered for military runways at this time *Road and Airfield Pavement Technology* H.
