Sedimentation Of The Wood Bay Spitsberge

J. D. Collinson, John Lewin

Sedimentation Of The Wood Bay Spitsberge:

Sedimentation of the Wood Bay Formation (Devonian) of Spitsbergen P. F. Friend, 1972 *Late Paleozoic and Mesozoic Continental Sedimentation, Northeastern North America* Geological Society of America. Northeastern Section, 2018

Aspects of Fluvial Sedimentation in the Lower Triassic Buntsandstein of Europe Detlef Mader, 2006-04-10 *Structural and Tectonic Modelling and its Application to Petroleum Geology* R.M. Larsen, H. Brekke, B.T. Larsen, E. Talleraas, 2013-10-22

This monograph presents a unique combination of structural and tectonic modelling with applied petroleum geological problems. Focussing on the Norwegian Continental Shelf and neighbouring areas, it includes discussion covering all scales from development of sedimentary basins to formation of fractures and joints on a microscale and from exploration to the exploitation of hydrocarbons. The book's coverage of structural and tectonic modelling, petroleum geology applications and the treatment of the Norwegian Continental Shelf should make this book an invaluable resource book for advanced students of structural and tectonic modelling, teachers and researchers as well as for geologists and geophysicists in the petroleum industry.

Petroleum Geology of the North European Margin A. M. Spencer, 2012-12-06 Complete Proceedings of the Symposium organised by the Norwegian Petroleum Society and held at Trondheim, Norway in 1983. *Modern and Ancient Fluvial Systems* J. D. Collinson, John Lewin, 2009-04-15 A book of research articles focused on fluvial processes. The book is divided into several main sections for ease of reference: Hydrodynamics and Bedforms, Present Day Channel Processes, Facies Models and Economic Aspects. Geographical and geological investigations are also described in *Modern and Ancient Fluvial Systems*. Research articles include the topics of bedforms and structures near the transition between dunes and a plane bed, as well as the vertical and lateral relationships between five major delta distributary channels. Research papers are also shared within the publication, such as a review of the major developments in the study of channel changes during this century. The individual chapter authors take readers from the Colorado Plateau of the Western United States to the Witwatersrand of South Africa. *Geological Survey of Canada, Paper 79-09*, **Sedimentary Processes, Environments and Basins** Gary Nichols, Edward Williams, Chris Paola, 2009-03-05 For several decades Peter Friend has been one of the leading figures in sedimentary geology and throughout that time he has helped scores of other people by supervising doctoral students, collaborating with colleagues especially in developing countries and selflessly sharing ideas with fellow geologists. This collection of papers is a survey of the research frontier in basin dynamics, a field Peter Friend helped initiate and a token of thanks from people who have benefited from an association with Peter during their careers. The papers in this book fall into four themes: Tectonics and sedimentation, Landscape evolution and provenance, Depositional systems and Fluvial sedimentation, which reflect Peter's research interests and are all important areas of current research in sedimentary geology. There are both case studies and review articles on these themes, which reflect recent work, but the collection can also be considered to be a sampler of sedimentary geology for anyone with broad interests in the Earth sciences. The Arctic

Ocean Alan Nairn, 2013-11-22 This trip backward in time capsulizes in a general way the geologic development of the area that is now northern Alaska The Cretaceous through Recent history is predominantly one of erosion of the ancient Brooks Range and filling of the Colville Geosyncline under processes like those in Operation today All the rocks older than Jurassic however were deposited far from their present sites One of the intriguing tectonic puzzles involves the geographic positions and relative timing of events that occurred during the orogeny that built the Brooks Range I suggest that pre Cretaceous deposition took place far to the north along the western margin of the Caledonides Subsequently the region that is now northern Alaska moved southward and impinged upon a northward moving plate or plates from the Pacific region Interactions between these two major parts of the earth's crust produced the Brooks Range during the Jurassic Later developments reflect continuing readjustments of the northern third of of thrust Alaska as southward movement was dissipated in diverse systems faulting and lateral displacement ACKNOWLEDGMENTS I am indebted to many colleagues who during the past 30 years shared with me the excitement and pleasures of exploring the geology of northern Alaska Among these are W P Brosge H N Reiser R L Detterman A K Armstrong A L Bowsher E G Sable I L Tailleux C G Mull M D Mangus A H Lachenbruch M C Lachenbruch R L Morris C J Sedimentation of the Wood Bay Formation (Devonian) of Spitsbergen Peter F. Friend, Mark Moody-Stuart, 1973 **Principles of Sedimentary Basin Analysis** Andrew D. Miall, 2013-03-09 Review of the second edition For geologists and geophysicists studying sedimentary fill of basins this volume is a valuable addition to their shelves The book is packed with information includes numerous lists of references and is up to date As a source volume this book is second to none It is clear and well organized GEOPHYSICS *Skifter om Svalbard og Nordishavet*, 1927 **Developments and Applications of Geomorphology** J. E. Costa, P. J. Fleisher, 2012-12-06 The last decade has seen a remarkable increase in the application of geomorphology for numerous projects and investigations Geomorphology is now viewed as an indispensable partner of engineering and geology in the world of applied science For a discipline with few independent theories of its own geomorphology has become a cosmopolitan science drawing on many topics from allied sciences To compile a list of successful and viable applications and contributions would be an arduous chore if not an impossible task Instead we have compiled a set of invited papers that represent some of the practical developments and uses of geomorphology over the past decade Such a compilation of papers will reflect our own backgrounds biases associations and personal and professional experiences We make no apologies for the topics omitted but recognize that this volume could be prohibitively large if all the subdivisions of geomorphology were equally and fully covered Our goal in assembling the papers for this volume was to emphasize the concepts principles and applications of geomorphology While techniques procedures and practical applications are stressed the reason for each investigation is as important as the method employed This book therefore represents the methods used and reasons for applying geomorphology Where case studies are used they serve as examples that can be applied in related situations similar settings

and other locations The authors have successfully addressed this goal in a broad selection of chapter topics

Correlation in Hydrocarbon Exploration John Collinson, 2012-12-06 This book is the published record of the papers presented at a conference of the Norwegian Petroleum Society NPF held in Bergen Norway on 3-5 October 1988 The conference was initially proposed and promoted by the Geology and Geophysics Advisory Committee of the Norwegian Petroleum Society consisting of A M Spencer Chairman M Brink J D Collinson S Hanslien D M D James T B Lund K Messel E Ormaasen and G Saeland The programme and more detailed planning of the conference was carried out by a programme committee consisting of J D Collinson Chairman O Eldholm E Holter D M D James H Tykoezinski D Worsley and S M Aasheim There were 245 participants at the meeting and 36 papers were presented as talks with a further 9 presented as posters These proceedings are representative of the range of topics covered The meeting was characterized by a high level of discussion which has influenced several authors in the final preparation of their written papers These proceedings have been edited on behalf of the Norwegian Petroleum Society by J D Collinson with help from H Tykoezinski The editor and the organizing committee wish to thank all the referees who reviewed papers and all the authors who responded so fully and promptly to their comments The NPF is most grateful to the University of Bergen for making available their facilities for the conference

The Making of a Land Ivar B. Ramberg, 2008 The Making of a Land Geology of Norway takes the reader on a journey in geological time from primordial times to the present day A fantastic journey from the summits of Norway's spectacular rugged and weather beaten mountains to the riches concealed in the sedimentary rocks on the continental shelf This book displays the treasures of Norwegian geology for everyone to see Norway's geological resources represent the foundation of its welfare state During several centuries first the mining and then the oil industries have been economic mainstays and this will continue in the future The book presents a description both of Norway and the planet we inhabit and depend on for our survival It is lavishly illustrated with photographs and maps from all over the country

Precambrian Geology and Metamorphic Petrology Qian Xianglin, Zhengdong You, Henry Campbell Halls, 1998 The proceedings of the 30th International Geological Congress held in Beijing China in August 1997 This volume focuses on Precambrian geology and metamorphic petrology It aims to present a view of contemporary geology to researchers interested in the geological sciences

Cyclic Sedimentation, 1967-01-01 This book provides an overview of the developments in sedimentology Despite the existence of a huge literature this is the first time that a textbook has been written on the subject of cyclic sedimentation The book tries to cover as much of the relevant data as is necessary to allow for adequate consideration of all significant hypotheses

Sedimentology of Coal and Coal-Bearing Sequences R. A. Rahmani, R. M. Flores, 2009-04-15 The recent increase in the search for coal has initiated a dramatic growth in sedimentological research on the origin formation and environment of coal deposition This publication is concerned with perhaps the most important field of coal research that of coal environments This subject involves many interrelated disciplines including the sedimentology petrology geochemistry

palaeobotany and palaeogeography of coal deposits In the past workers in these fields have operated independently and only recently have their research efforts been integrated to provide a more comprehensive understanding of coal depositional environments *Terranes in the Circum-Atlantic Paleozoic Orogens* R.
