Sediments And Environmental Geochemistry Selected Aspects And Case Histories:

Sediments and Environmental Geochemistry Dietrich Heling, Peter Rothe, Ulrich Förstner, Peter Stoffers, 2012-12-06
Sediments and Environmental Geochemistry is dedicated to Professor German Müller on the occasion of his 60th birthday. The individual articles written by outstanding scientists cover a wide range of subjects indicating the broad spectrum of his interests. The main topics are Carbonate and Evaporite Petrology, Petroleum Formation and Exploration, Environmental Geochemistry, Coal Petrography, Data Bases in Geosciences and Volcanology. **Methods and Approaches in**

Metropolitan Pollution Research Hui Zhang, 2025-01-16 This book focuses on the behaviour and impact of environmental pollutants in metropolitan development by studying the cases of the soil, water and atmosphere of both Shanghai and Nanjing, which are two of the fastest economically developing areas in recent decades in China. Based on samples and experiments, some solutions for bottleneck problems in recent practices for urban environment research are systematically discussed, proposing the following innovations: 1. classifying urban pollution in a developing metropolis based on pollutant behaviour mechanisms; 2. identifying the amount of trace metals added by human activities to urban soil and their geological background amount distinguishable from the total amount of detectable trace metals as a whole. This book can provide a valuable guide for researchers and engineers in relevant disciplines and for environmental policymakers to consult in decision making practices for urban development and environmental protection. Geochemistry Dionisios

Panagiotaras, 2012-05-02 This book brings together the knowledge from a variety of topics within the field of geochemistry. The audience for this book consists of a multitude of scientists such as physicists, geologists, technologists, petroleum engineers, volcanologists, geochemists and government agencies. The topics represented facilitate establishing a starting point for new ideas and further contributions. An effective management of geological and environmental issues requires the understanding of recent research in minerals, soil, ores, rocks, water, sediments. The use of geostatistical and geochemical methods relies heavily on the extraction of this book. The research presented was carried out by experts and is therefore highly recommended to scientists, under and post graduate students who want to gain knowledge about the recent developments in geochemistry and benefit from an enhanced understanding of the dynamics of the earth's system processes.

Rifting and Sediments in the Red Sea and Arabian Gulf Regions Najeeb M.A. Rasul, Ian C.F. Stewart, 2024-05-08
Rifting and Sediments in the Red Sea and Arabian Gulf Regions is a unique text that covers a wide range of topics related to the tectonics and geology of the Red Sea and Arabian/Persian Gulf region. This book is a collection of invited and peer-reviewed chapters contributed by active researchers around the world. The topics covered in this book include tectonics, magmatism and lithology, particularly in the Red Sea area. The book also delves into the sediments and evaporites of the Red Sea and Gulf. As the area around the Arabian Peninsula is prone to earthquakes, the seismic hazard estimated in the Red Sea region is also covered by several chapters. Each chapter presents new data and offers extensive lists of references for the

reader to explore further With the ongoing debates regarding the structure of the Red Sea this book serves as an excellent resource for researchers and any individuals interested in the geology of these two unique seas

Palaeoecology of Quaternary Drylands Werner Smykatz-Kloss, 2004-02-20 The twelve contributions in this volume represent the results of a ten year interdisciplinary workshop on desert margins concerned with the geomorphological geochemical mineralogical sedimentological soil scientific characterisation of semi deserts in Spain Africa Arabia and China Desert sediments and soils as well as processes and characteristics of their formation are regarded from different geoscientific perspectives The subjects of research include the development of desert soils and landscapes the formation of alluvial loess swamp ores fulgurites and floodout sediments and focus on the reconstruction of palaeoecological events and changes A critical study of dating methods rounds off the book

Geological Survey of Canada, Open File 2697 , Salt Tectonics, Sediments and Prospectivity G. Ian Alsop, 2012 In this timely volume geoscientists from both industry and academia present a contemporary view of salt at a global scale The studies examine the influence of salt on synkinematic sedimentation its role in basin evolution and tectonics and ultimately in hydrocarbon prospectivity Recent improvements in seismic reflection acquisition and processing techniques have led to significant advances in the understanding of salt and sediment interactions both along the flanks of vertical or overturned salt margins and in subsalt plays such as offshore Brazil The book is broadly separated into five major themes covering a variety of geographical and process linked topics These are halokinetic sequence stratigraphy salt in passive margin settings Central European salt basins deformation within and adjacent to salt and salt in contractional settings and salt glaciers

Petroleum Abstracts. Literature and Patents , 1992 AN APPRAISAL ON FORTHCOMING VIZHINJAM INTERNATIONAL SEAPORT AREA Reji Srinivas, Silpa B L, Krishna R Prasad, 2018-07-05 The coastline terms the interface between land and water Over one third of the world's population lives either at the coasts or in adjacent coastal low land areas The coast is a region of extreme energy contribution The energy transported by waves arrives at the coast and is obtainable for work Thus the outcome is the processes of sediment transport causing morphological changes As a result the coasts form the most rapidly changing places on earth's surface playing an important role in global transportation of sediments Hence studies on the coastal zone where air land and water interact are a focus of particular interest among the scientific community The coastal areas across the world are also of great economic importance as they contain copious natural resources and desired tourist destinations because of their immense scenic landscape The port terminals and fishing harbors play a key role in the worldwide economy through the transportation and storage of traded goods On the other hand their operating activities are extremely hurtful to marine and coastal environments if not properly maintained or monitored The deeds of ports are the significant sources of environmental pollution and their construction may also harmfully affect the coastal environment such as jetties breakwater The upcoming Vizhinjam seaport is a vital infrastructure to cater the container trades and these amenities may considerably dash the overall morphology and

dynamics of the region Hence to attain a preliminary view of its environmental conditions a pilot study on the textural mineralogical and geochemical distribution were analyzed in surface sediment samples of the Vizhinjam port area Origin and Mineralogy of Clays Bruce Velde,2013-03-09 Origin and Mineralogy of Clays the first of two volumes lays the groundwork for a thorough study of clays in the environment The second volume will deal with environmental interaction Going from soils to sediments to diagenesis and hydrothermal alteration the book covers the whole spectrum of clays The chapters on surface environments are of great relevance in regard to environmental problems in soils rivers and lake ocean situations showing the greatest interaction between living species and the chemicals in their habitat The book is of interest to scientists and students working on environmental issues **The Parting of the Sea** Barbara J. Sivertsen,2009-02-17 For more than four decades biblical experts have tried to place the story of Exodus into historical context without success What could explain the Nile turning to blood insects swarming the land and the sky falling to darkness Integrating biblical accounts with substantive archaeological evidence The Parting of the Sea looks at how natural phenomena shaped the stories of Exodus the Sojourn in the Wilderness and the Israelite conquest of Canaan Barbara Sivertsen demonstrates that the Exodus was in fact two separate exoduses both triggered by volcanic eruptions and provides scientific explanations for the ten plagues and the parting of the Red Sea Over time Israelite oral tradition combined these events into the Exodus narrative known today Skillfully unifying textual and archaeological records with details of ancient geological events Sivertsen shows how the first exodus followed a 1628 B C E Minoan eruption that produced all but one of the first nine plagues The second exodus followed an eruption of a volcano off the Aegean island of Yali almost two centuries later creating the tenth plague of darkness and a series of tsunamis that parted the sea and drowned the pursuing Egyptian army Sivertsen s brilliant account explains inconsistencies in the biblical story fits chronologically with the conquest of Jericho and confirms that the Israelites were in Canaan before the end of the sixteenth century B C E In examining oral traditions and how these practices absorb and process geological details through storytelling The Parting of the Sea reveals how powerful historical narratives are transformed into myth *Biological Soil Crusts: An Organizing Principle in Drylands* Bettina Weber,Burkhard Büdel,Jayne Belnap,2016-05-21 This volume summarizes our current understanding of biological soil crusts biocrusts which are omnipresent in dryland regions Since they cover the soil surface they influence or even control all surface exchange processes Being one of the oldest terrestrial communities biocrusts comprise a high diversity of cyanobacteria algae lichens and bryophytes together with uncounted bacteria and fungi The authors show that biocrusts are an integral part of dryland ecosystems stabilizing soils influencing plant germination and growth and playing a key role in carbon nitrogen and water cycling Initial attempts have been made to use biocrusts as models in ecological theory On the other hand biocrusts are endangered by local disruptions and global change highlighting the need for enhanced recovery methods This book offers a comprehensive overview of the fascinating field of biocrust research making it indispensable not only for scientists in this

area but also for land managers policy makers and anyone interested in the environment Journal of Sedimentary Petrology ,1991 *Dynamics of Complex Intracontinental Basins* Ralf Littke,Ulf Bayer,Dirk Gajewski,Susanne Nelskamp,2008-08-11 Sedimentary basins host among others most of our energy and fresh water resources they can be regarded as large geo reactors in which many physical and chemical processes interact Their complexity can only be well understood in well organized interdisciplinary co operations This book documents how researchers from different geo scientific disciplines have jointly analysed the structural thermal and sedimentary evolution as well as fluid dynamics of a complex sedimentary basin system which has experienced a variety of activation and reactivation impulses as well as intense salt tectonics In this book we have summarized our geological geophysical and geochemical understanding of some of the most important processes affecting sedimentary basins in general and our view on the evolution of one of the largest best explored and most complex continental sedimentary basins on Earth The Central European Basin System Bibliography and Index of Geology ,1992 *Sediment Provenance Studies in Hydrocarbon Exploration and Production* R.A. Scott,H.R. Smyth,A.C. Morton,N. Richardson,2014-06-25 Sediment provenance studies concern the origin composition transportation and deposition of detritus and therefore are an important part of understanding the links between basinal sedimentation and hinterland tectonics and unroofing Such studies can add value at many stages of hydrocarbon exploitation from identifying regional scale crustal affinities and sediment dispersal patterns during the earliest stages of exploration to detailed correlation in producing reservoirs and understanding the impact of mineralogy on reservoir diagenesis The volume showcases the wide variety of techniques available using examples and applications from all aspects of sediment provenance research The papers are organized into four sets around the following themes Overview applications of provenance information in hydrocarbon reservoir sandstones Provenance diagenesis and reservoir quality Provenance studies linking sediment to source Looking forward development of techniques and data handling This book is dedicated to the memory of Maria Mange and Robert A Scott *Sundarban Mangrove Wetland (A UNESCO World Heritage Site)* Santosh Kumar Sarkar,2022-04-13 Sundarban Mangrove Wetland A Comprehensive Global Treatise provides an illustrative account of the ecology biology conservation and management strategies of this endangered UNESCO World Heritage Site The book offers a comprehensive and accessible guide to a variety of wetland ecosystems including endangered flora and fauna the ecology and diversity of pelagic and benthic biota the impact of multiple stresses on the biota inorganic and organic pollutants in biotic and abiotic matrices and their remedial measures the impact of climate change on mangrove plants and their conservation and management strategies Divided into seven chapters the book presents a realistic summary of the wetland environment and its resources citing individual case studies considering a host of topics of particular interest Analysis of this unique wetland provides crucial comparisons with other wetlands and their status environmental challenges and possible remedial measures Sundarban Mangrove Wetland is an in depth and up to date account ideal for the student teacher or

researcher in marine biology ecology environmental science marine geochemistry marine pollution and ecotoxicology and wastewater treatment Covering both fundamental and advanced aspects the book is also useful for policy makers and those involved in coastal resource conservation and management Presents an in depth and illustrative accounting of an iconic tropical mangrove wetland in an intelligible and easy to understand manner Provides a unique look at the ecology biodiversity and conservation and management of the Sundarban wetlands along with the emerging ecological issues that may affect long term sustainability Focuses on several case studies considering microzooplankton and trace metals in the Sundarban wetlands *Vestník Ústřední ústav geologický* (Czech Republic),1991 Environmental Geochemistry

Benedetto De Vivo,Harvey Belkin,Annamaria Lima,2024-02-27 Environmental Geochemistry Site Characterization Data Analysis Case Histories and Associated Health Issues provides a wealth of information on modern geochemical methods techniques and procedures for those studying toxic substances found in soil air and water This new edition takes an especially close look at environmental pollution and its impact on human health The first third of the book looks at a variety of methods and procedures such as taking groundwater samples biological monitoring geochemical mapping and models of geochemical speciation This is followed by a close look at different pollutants including lead and pesticides The authors conclude with several detailed case histories examining health issues resulting from environmental pollution Environmental researchers and practitioners will return to this book again and again in their work towards understanding and reducing the environmental pollutants that affect our health Provides an in depth examinations of the latest geochemical techniques and procedures Presents a detailed analysis of various applied studies in pollution and contamination Includes new case histories that highlight environmental pollution and related health issues **Chinese Journal of Geochemistry** ,2006
