Seeing Contour And Colour:

Seeing Contour and Colour J. J. Kulikowski, C. M. Dickinson, I. J. Murray, 1989 **The Visually Responsive Neuron** T.P. Hicks, S. Molotchnikoff, T. Ono, 1993-03-18 This timely new volume presents broad based and wide ranging contributions on all aspects of vision The material is grouped for presentation in a logical fashion in five main themes peripheral processing sensory integration in superior colliculus organization of visual projections development and plasticity and neuronal encoding and visually guided behavior The material spans from molecules to cognition including overt behavior and synaptic and membrane levels of analysis The species studied also range over diverse phyla while contributors too form a diverse group representing Europe North America and Asia The Visually Responsive Neuron is an exciting and informative addition to the well known Progress in Brain Research series **Colour Vision Deficiencies X** B. Drum, J.D. Moreland, A. Serra, 2012-12-06 Since its inception the International Research Group on Colour Vision Deficiencies IRGCVD has followed the policy that the Symposium Proceedings should be as close as possible to a complete record of the scientific content of the meeting This policy has the advantage of providing an accurate picture of the current state of the art in research on color vision deficiencies but it also has the disadvantage that papers typically span a wide range of quality In this volume however we have instituted a system of peer review in an effort to enhance scientific quality as much as possible while continuing our past policy of publishing all submitted manuscripts In addition to being edited for English composition and grammar each of the papers included here has been carefully reviewed by an IRGCVD member selected for his or her expertise in the specific topic of the paper Reviewers were instructed to include in their comments suggestions for improvement rather than recommendation or rejection In our opinion this review process recommendations for publication has resulted in substantial improvement of many of the articles and has enhanced the value of the publication We are pleased to acknowledge the efforts of our reviewers and offer them our sincere thanks for their important contributions to Colour Vision Deficiencies X The Editors B Drum J D Moreland A Serra eds Colour Vision Deficiencies X p xiii **Colour Vision Deficiencies XII** B. Drum, 2012-12-06 From the 98 presentations of the XIIth Symposium on Colour Vision Deficiencies 61 were selected after peer review and revision by the authors In addition to these contributions this volume contains a cumulative index to all authors in the IRGCVD proceedings since the first one in 1968 including the present volume The contents include contributions on basic questions of anatomical and electrophysiological organisation of the neural pathways underlying colour vision and on ways in which disturbances of these pathways can produce acquired colour vision deficiencies Further contributions deal with genetics and congenital red green colour deficiencies and colour vision testing The resulting publication contains much of interest to basic vision scientists as well as to specialists in colour vision deficiencies **Current Catalog** National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70 *Modulation of Neuronal Responses* Giedrius T. Buračas, 2003
Representations of Vision Andrei Gorea, 1991-04-26 This stimulating volume on vision extends well beyond the traditional

areas of vision research and places the subject in a much broader philosophical context. The emphasis throughout is to integrate and illuminate the visual process. The first three parts of the volume provide authoritative overviews on computational vision and neural networks on the neurophysiology of visual cortex processing and on eye movement research. Each of these parts illustrates how different research perspectives may jointly solve fundamental problems related to the efficiency of visual perception, to the relationship between vision and eye movements and to the neurophysiological codes underlying our visual perceptions. In the fourth part leading vision scientists introduce the reader to some major philosophical problems in vision research such as the nature of ultimate codes for perceptual events, the duality of psychophysics, the bases of visual recognition and the paradigmatic foundations of computer vision research. **Colour Vision** Evan Thompson, 2003-09-02 Thompson provides an accessible review of the current scientific and philosophical discussions of colour vision and is vital reading for all cognitive scientists and philosophers whose interests touch upon this central area.

Colour Vision Deficiencies XIII C.R. Cavonius, 2012-12-06 The 13th biennial Symposium of the International Research Group on Colour Vision Deficiencies was held from 27 July to 30 July 1995 in the splendid *Le Grand Théâtre de la Ville* in Pau, France. A total of 80 papers and posters were presented during the four days of which 56 have been selected for inclusion in this volume. Each has been reviewed by two of the Editors. Additionally, in numerous cases in which specialized knowledge was called for, the Editors asked for external help; their assistance is acknowledged below. While Pau now exists largely on agriculture and more recently oil extraction and refining, a century ago it was a winter resort that rivalled Cannes and Nice. Indeed, Baedeker judged the air of Pau to be preferable for those of a nervous disposition. Pau and the surrounding Béarn district are rich in history and have close ties to the Basque region, both of which were exploited brilliantly by the local organizers. Doctors Jean and Veronique Liedtke introduced the participants to the gastronomy and traditions of the region. The Committee of the IRGCVI owe a great debt of gratitude to the external reviewers: Oscar Estevez, Karl Gegenfurtner, Gunilla Hägerström, Portnoy, R.L. Hilz, John Krauskopf, Anne Kurtenbach, Barry B. Lee, Adam Reeves, Marilyn Schneck, L.T. Sharpe, Eugene Switkes, Wayne Verdon and B.A. *Cerebral Cortex* Alan Peters, Kathleen S. Rockland, 2013-06-29 Volume 10 is a direct continuation and extension of Volume 3 in this series, *Visual Cortex*. Given the impressive proliferation of papers on visual cortex over the intervening eight years, Volume 10 has specifically targeted visual cortex in primates and even so it has not been possible to survey all of the major or relevant developments in this area. Some research areas are experiencing rapid change and can best be treated more comprehensively in a subsequent volume, for example, elaboration of color vision patterns and subdivisions of functional columns. One major goal of this volume has been to provide an overview of the intrinsic structural and functional aspects of area 17 itself. Considerable progress has been made since 1985 in unraveling the modular and laminar organization of area 17 and this aspect is directly addressed in the chapters by Peters and Lund, et al., Wong, Riley and Casagrande, and Kaas. A recurring leitmotif here is the evidence for precise and exquisite order in the

interlaminar and tangential connectivity of elements At the same time however as detailed by Lund et al and Casagrande and Kaas the very richness of the connectivity implies a multiplicity of processing routes This reinforces evidence that parallel pathways may not be strictly segregated Further connectional complexity is contributed by the various sets of inhibitory neurons as reviewed by Lund et al and Jones et al **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1990 **The Biology of Sea Turtles** Jeanette Wyneken,Kenneth J. Lohmann,John A. Musick,2013-03-25 Since the first volume of The Biology of Sea Turtles was published in 1997 the field has grown and matured in ways few of the authors would have predicted particularly in the areas of physiology behavior genetics and health Volume III presents timely coverage of emerging areas as well as the integration of approaches and information that did not exist even a decade ago The book assembles the foremost experts in each topic to provide the most up to date and comprehensive book on sea turtles available today New areas covered include in vivo imaging of structure spatial distributions of marine turtles at sea epibiosis imprinting parasitology and climatic effects Life history is explored in three chapters covering age determination predator prey interactions and mortality from bycatch The Biology of Sea Turtles Volume III will inspire scientists and students to explore and expand their understanding of these intriguing animals The book provides clear baseline summaries thoughtful syntheses and effective presentation of the most fundamental topics spanning form and function health distributions behavior genetics evolution and ecology Its scope and depth make it the definitive go to reference in the field

Wade,2023-06-02 This book celebrates binocular vision by presenting illustrations that require two eyes to see the effects of cooperation and competition between them Pictures are flat but by printing them in different colours and viewing them through similarly coloured filters included with the hardcover book they are brought to life either in stereoscopic depth or in rivalry with one another They are called anaglyphs and all those in the book display the ways in which the eyes interact Thus the reader is an integral element in the book and not all readers will see the same things The history science and art of binocular vision can be experienced in ways that are not usually available to us and with images made specifically for this book The study of vision with two eyes was transformed by the invention of stereoscopes in the early 19th century Anaglyphs are simple forms of stereoscopes that have three possible outcomes from viewing them with each eye alone to see the monocular images with both eyes to see them in stereoscopic depth or rivalry or without the red cyan glasses where they can have an appeal independent of the binocularity they encompass Through the binocular pictures and the words that accompany them there will be an appreciation of just how remarkable the processes are that yield binocular singleness and depth Moreover the opportunities for expressing these processes are explored with many examples of truly binocular art

Human Color Vision Jan Kremers,Rigmor C. Baraas,N. Justin Marshall,2016-12-06 Our understanding of human color vision has advanced tremendously in recent years helped along by many new discoveries ideas and achievements It is therefore timely that these new developments are brought together in a book assembled specifically to include new research and insight from the leaders in the field Although intentionally not exhaustive many aspects of color vision are discussed in this Springer Series in Vision Research book including the genetics of the photopigments the anatomy and physiology of photoreceptors retinal and cortical pathways color perception the effects of disorders theories on neuronal processes and the evolution of human color vision Several of the chapters describe new state of the art methods within genetics morphology imaging techniques electrophysiology psychophysics and computational neuroscience The book gives a comprehensive overview of the different disciplines in human color vision in a way that makes it accessible to specialists and non specialist scientists alike About the Series The Springer Series in Vision Research is a comprehensive update and overview of cutting edge vision research exploring in depth current breakthroughs at a conceptual level It details the whole visual system from molecular processes to anatomy physiology and behavior and covers both invertebrate and vertebrate organisms from terrestrial and aquatic habitats Each book in the Series is aimed at all individuals with interests in vision including advanced graduate students post doctoral researchers established vision scientists and clinical investigators The series editors are N Justin Marshall Queensland Brain Institute The University of Queensland Australia and Shaun P Collin Neuroecology Group within the School of Animal Biology and the Oceans Institute at the University of Western Australia **The Science of Color** Steven K. Shevell,2003-07-11 The Science of Color focuses on the principles and observations that are foundations of modern color science Written for a general scientific audience the book broadly covers essential topics in the

interdisciplinary field of color drawing from physics physiology and psychology This book comprises eight chapters and begins by tracing scientific thinking about color since the seventeenth century This historical perspective provides an introduction to the fundamental questions in color science by following advances as well as misconceptions over more than 300 years The next chapters then discuss the relationship between light the retinal image and photoreceptors followed by a focus on concepts such as color matching and color discrimination color appearance and color difference specification the physiology of color vision the 15 mechanisms of the physics and chemistry of color and digital color reproduction Each chapter begins with a short outline that summarizes the organization and breadth of its material The outlines are valuable guides to chapter structure and worth scanning even by readers who may not care to go through a chapter from start to finish This book will be of interest to scientists artists manufacturers and students **Colour Vision Deficiencies IX** B.
