ARACHIDONIC ACID FORMING A FAMILY OF LIPIDIC
SUBSTANCES WITH INTRINSIC BIOLOGICAL
ACTIVITIES.

PROSTAGLANDINS

LEUKOTRIENES

THROMBOXANES

- Prostaglandins are lipid autacoids derived from arachidonic acid.
- They both sustain homeostatic functions and mediate pathogenic mechanisms, including the inflammatory response.

- The leukotrienes are a family of biologically active molecules, formed by leukocytes, mastocytoma cells, macrophages, and other tissues and cells in response to immunological and nonimmunological stimuli.

- Thromboxane A₂ (TXA₂), together with prostacyclin (PGI₂), maintain vascular homeostasis and platelet aggregation.
- PGI₂ is a vasodilator and platelet aggregation inhibitor, and TXA₂ is a vasoconstriction and platelet aggregation promoter.

Prostaglandins and Thromboxanes F. Berti, 2012-12-06 **Biochemical Aspects of Prostaglandins and Thromboxanes** Norman Kharasch, 2012-12-02 Biochemical Aspects of Prostaglandins and Thromboxanes covers the proceedings of the 1976 Intra Science Research Foundation Symposium on New Biochemistry of Prostaglandins and Thromboxanes held in Santa Monica California This 14 chapter book deals first with the biosynthesis of prostaglandins and thromboxanes with bovine vesicular gland and in transformed fibroblasts These topics are followed by discussions on the pharmacologic properties and the role of prostaglandins as mediators of the inflammatory response The next chapters describe the structure activity relations and the pharmacologic activities of the prostaglandin series with an emphasis on their role in cancer obstetrics and gynecology The remaining chapters examine the role of prostaglandin endoperoxides and thromboxanes as bioregulators This book will be of value to biochemists and pharmacologists *Prostaglandins and Thromboxanes* Roger F. Newton, Stanley M. Roberts, 2016-01-21 Prostaglandins and Thromboxanes explores the two members of the prostanoid class of fatty acid This book attempts to thoroughly discuss the topic after collecting enough information through research in physical and biological sciences As the title suggests the book revolves around prostaglandins and thromboxanes The book s first chapter contains a discussion on the subject s history stating the year of discovery and crediting the scientist who coined the names The chapter ends talking about the possible uses of prostaglandins and thromboxanes in the clinic The chapters that follow discuss the two lipids basic and advanced synthesis pharmacology biosynthesis biological activity chemical interconversions and metabolism along with its subtopics The book will serve as an excellent reference for undergraduate and graduate students in the related field Biochemical Aspects of Prostaglandins and Thromboxanes Norman Kharasch, Josef Fried, 1976 *Prostaglandins, Prostacyclin, and Thromboxanes Measurement* J.M. Cox, 2005 CD ROM includes animations living graphs biochemistry in 3D structure tutorials The Prostaglandin System F. Berti, 2013-06-29 Prostaglandin research is one of the most explosive fields in the biological science and there have been a number of international symposia on this subject In planning the second Advanced Course in Erice Sicily at the Ettore Majorana center it was realized that large congresses might not represent the best way to facilitate communication within specialized areas of biologic and medical research In fact small meetings where in depth discussion is confined to a limited number of scientists are now generally considered successful vehicles of scientific information With this in mind we made an effort in collecting a number of experts in both experimental and clinical use of

these important arachidonate metabolites We have been very fortunate in bringing together a faculty of international authorities who contributed to the course with brilliant presentations and lively discussion Thus this book represents an up to date overview of the physiology and pharmacology of different products derived from arachidonic acid metabolism associated with outstanding suggestions of their clinical potential It is our hope that from this Advanced Course and its resulting publication new ideas concerning the physio pathological role of these compounds will arise together with new directions for future research We are deeply indebted to NATO for its interest and generous support which made this Second Course a reality

Recent Advances in Prostaglandin, Thromboxane, and Leukotriene Research Helmut Sinzinger, Bengt Samuelsson, Sir John R. Vane, Rodolfo Paoletti, Peter Ramwell, Patrick Y-K Wong, 2013-11-11

The International Symposium on Prostaglandins and Related Compounds first held in Vienna 1972 revisited the city after 24 years for the 10TH Symposium For the many researchers working in this multi disciplinary field it was an opportunity to exchange their experiences and share new data with colleagues from all around the world This scientific exchange was largely encouraged by the unseasonably cold and rainy weather For the first time there was quite a large attendance from the former Communist countries Eugene Garfield prepared a key note address delivered during the meeting The Scientist 1996 12 reviewing the contribution of the Nobel Laureates U S von Euler, J R Vane, S K Bergstrom and B I Samuelsson discussing the relevance of the more than 40 000 papers in this area published since 1991 Overall there is still a rapidly growing interest and in particular a great variety of clinical applications of this family of compounds which were discussed in detail during the meeting Beside the lectures there were 19 workshops covering nearly all the topics of key interest All the speakers were invited to prepare a manuscript which has resulted in the volume now in your hands Special thanks to Dr Patrick Wong and the new publisher of this series who helped to publish the proceedings in the usual quality and reasonable period of time Looking forward to seeing all of you again in Florence in 1999 hopefully with much more sun
