Roof: Homes with wood-shake shingle roofs are much more likely to be destroyed during a wildfire than homes with fire-resistant roofs. Consider replacing wood-shake or shingle roofs with Class-A fire-resistant type (composition, metal or tile).

Firewood: Stacks should be kept at least 30 feet away from the house on the uphill side if possible.

Windows: Single pane and large windows are the most vulnerable. Install windows that are double-paned and utilize tempered glass on the exterior pane.

Decks: Decking material made of wood and wood-plastic materials are often combustible. All decking material should be kept in good condition. Combustible debris such as pine needles, twigs and leaves should be removed and kept from gaps between deck boards.

Siding: Wood products (boards, panels and shingles) are common siding materials. However, they are combustible and not a good choice for homes in fire-prone areas. Stucco, brick, cement board and steel are better non-combustible siding choices. If using non-combustible siding is not feasible, keeping siding in good condition.

Propane Tanks: Should be kept at least 30 feet away from the house.

Rain Gutters: Gutters can trap flying embers. Always keep rain gutters free of leaves, needles and other debris. Check and clean them several times a year.

Deck Enclosure: Where possible, enclose the base of decks with a non-combustible material. Do not store items underneath decks.
