Protein Metabolism In Farm Animals Evaluation Digestion Absorption And Metabolism:

Protein Metabolism in Farm Animals Hans-Dietrich Bock, 1989 Farm animals are grown mainly to provide high quality proteins for human use in the form of meat milk eggs skin and wool These products are usually formed from lower quality proteins in complex processes that involve losses through digestion absorption and transport Because proteins are the most expensive major component of the animal diet per unit of weight the efficiency with which they are used is of great importance biologically and economically This book begins with a description of the dietary proteins and methods for their measurement This is followed by detailed accounts of their digestion in ruminants pigs poultry and fish The physiological basis of adsorption of amino acids is discussed in detail This is followed by reviews of the processes of protein synthesis and degradation and the hormonal and energetic regulation of these processes Written by a group of experienced scientists this is the first book in which all of these topics are discussed in detail at a fundamental level For advanced students and research workers in animal science and agriculture

Biotechnology in Animal Feeds and Animal Feeding R. John Wallace, Andrew Chesson, 2008-07-11 With the dramatically rising sophistication of biological methods and products and the increasing use of recombinant DNA technology now is an apt time to review the status of biotechnology in animal feeding This book gives succinct yet comprehensive coverage of products of biotechnology and allied sciences used in animal feed and feeding industries Particular emphasis is placed on Conservation and upgrading of feeds and feed components Increasing the protein value of feeds Antimicrobials Microbial feed additives Increasing the energy value of feeds Moreover increasing environmental concerns are reflected in chapters describing dietary products which may help to reduce environmental hazards from animal feeding enterprises A discussion of social and legislative aspects relating to biotechnology and animal feeding rounds off this useful compilation of timely articles

Avian Energetics and Nutritional Ecology C. Carey, 2012-12-06 A symposium held in 1973 chaired and organized by William R Dawson was the first major attempt to summarize and synthesize the existing information in the then emerging field of avian energetics The symposium featured papers by James R King William A Calder III Vance A Tucker and Robert E Ricklefs and commentaries by George A Bartholomew S Charles Kendeigh and Eugene P Odum The proceedings of the symposium Avian Energetics Paynter 1974 played a critical role in stimulating interest and research in the field of avian energetics Some twenty odd years

later we are making another attempt to summarize the information in the field of avian energetics. Some obvious differences exist between its predecessor and this volume. Numerous improvements in methodology such as the use of doubly labeled water to estimate metabolism in free living birds now allow researchers to ask questions that could not be addressed previously. Second consideration of nutrition is now inseparable from that of energetics. This merger is necessary not only because food intake is the source of both energy and nutrients but also because one or more nutrients rather than energy can be limiting for a given species in a particular instance. Finally the study of energetics and nutritional ecology particularly in birds and mammals has grown so dramatically that a single volume can now only partially cover the range of possible topics and can catalogue only a sampling of all the studies on the subject.
