Proteins Of Iron Metabolism:

Proteins of Iron Metabolism Ugo Testa, 2001-09-25 Proteins of Iron Metabolism presents a clear picture of the structure and function of the main proteins involved in iron metabolism The book gives you a detailed description of the structure and function of each protein and discusses the structure and regulation of the corresponding genes in parallel It supplies an analysis of the differential e Proteins of Iron Metabolism Elmer Burrell Brown, 1977 **Iron Metabolism** Robert Crichton, 2009-02-25 Iron is of fundamental importance to the growth development and well being of almost all living organisms Multiple biological systems have evolved for the uptake utilisation storage and homeostasis of iron in microbes plants and mammals Both iron deficiency and iron overload are found extensively in humans the intimate links between iron and oxidative stress are associated with a wide range of pathologies Iron has a well established role in infections by a range of microorganisms and parasites Other metals such as copper and zinc are also closely linked with iron metabolism Iron overloads and deficiencies are important factors in the health of humans and are therefore a key target in drug development Iron Metabolism From Molecular Mechanisms to Clinical Consequences 3rd Edition presents a comprehensive overview of this important field Topics covered include Solution chemistry of iron in biological media The importance of iron for biological systems Microbial iron transport and metabolism Iron uptake by plants and fungi Cellular iron uptake and export in mammals Intracellular iron storage and biomineralization Intracellular iron metabolism and cellular iron homeostasis Iron absorption in mammals with particular reference to man and regulation of systemic iron balance Pathophysiology of iron deficiency and iron overload in man Iron and oxidative stress Brain iron homeostasis and its perturbation in various neurodegenerative diseases Interactions between iron and other metals Written in a lively style by one of the leaders in the field and presented in full colour this third expanded edition of Iron Metabolism has been fully updated with the latest discoveries Major additions include recent information on mitochondrial iron metabolism and the role of frataxin transcriptional control of iron homeostasis orally active iron chelators the roles of hepcidin and erythropoietin the increasing number of types of iron overload and the importance of iron in Alzheimer s disease Iron Metabolism is essential reading for researchers and students in biochemistry molecular biology microbiology cell biology nutrition and the medical sciences It will also find space on the bookshelves of bioinorganic chemists with an interest in iron metabolism health professionals with an interest in diseases of iron metabolism and pharmacologists in the pharmaceutical industry interested in developing novel iron binding drugs **Iron Metabolism** Sarika Arora, 2012-06-29 Iron has various functions in the body including the metabolism of oxygen in a variety of biochemical processes Iron as either heme or in its nonheme form plays an important role in key reactions of DNA synthesis and energy production However low solubility of iron in body fluids and the ability to form toxic hydroxyl radicals in presence of oxygen make iron uptake use and storage a serious challenge The discovery of new metal transporters receptors and peptides and as well as the discovery of new cross interactions between known

proteins are now leading to a breakthrough in the understanding of systemic iron metabolism The objective of this book is to review and summarize recent developments in our understanding of iron transport and storage in living systems

Microbial Iron Metabolism J. B. Neilands, 2014-06-28 Microbial Iron Metabolism A Comprehensive Treatise provides a comprehensive treatment of microbial iron metabolism It aims to contribute to an increased understanding of the path of iron in microbial species and eventually in the plant and animal The book is organized into five parts Part I describes some features of iron and its function in the microbial world These include a historical sketch of the recognition of the importance of iron in cellular physiology a description of certain physical properties of ferrous and ferric ions and a list of various known biocoordination derivatives grouped by ligand atom Metabolism under iron limited conditions is also examined Part II presents studies on iron transport biosynthesis and storage in microorganisms Part III examines iron enzymes and proteins including ferredoxin rubredoxin nitrogenase and hydrogenase Part IV deals with reactions of inorganic substrates Part V presents a study on the role of bacterial iron metabolism in infection and immunity

Iron Metabolism Robert Crichton, 2016-03-30 Iron is indispensable for the growth development and well being of almost all living organisms Biological systems from bacteria fungi and plants to humans have evolved systems for the uptake utilisation storage and homeostasis of iron Its importance for microbial growth makes its uptake systems a natural target for pathogenic microorganisms and parasites Uniquely humans suffer from both iron deficiency and iron overload while the capacity of iron to generate highly reactive free radicals causing oxidative stress is associated with a wide range of human pathologies including many neurodegenerative diseases Whereas some essential metal ions like copper and zinc are closely linked with iron metabolism toxic metals like aluminium and cadmium can interfere with iron metabolism Finally iron metabolism and homeostasis are key targets for the development of new drugs for human health The 4th edition of Iron Metabolism is written in a lively style by one of the leaders in the field presented in colour and covers the latest discoveries in this exciting area It will be essential reading for researchers and students in biochemistry molecular biology microbiology cell biology nutrition and medical sciences Other interested groups include biological inorganic chemists with an interest in iron metabolism health professionals with an interest in diseases of iron metabolism or of diseases in which iron uptake systems are involved eg microbial and fungal infections cancer neurodegenerative disorders and researchers in the pharmaceutical industry interested in developing novel drugs targeting iron metabolism homeostasis

Iron Metabolism in Human Health and Disease Kostas Pantopoulos, 2025-08-03 This book provides a state of the art overview on the role of bioiron in health and disease Iron is an essential constituent of simple and complex organisms and has played a critical role in the origin of life Cells utilize iron for energy metabolism oxygen transport and several biochemical reactions due to its flexible coordination chemistry and its unique ability to serve both as electron donor and acceptor The term bioiron was coined to emphasize the importance of iron in biology and medicine Even though iron is an abundant metal its bioavailability is limiting This often

leads to iron deficient states which manifest in anemia and other co morbidities In fact iron deficiency is the most common medical condition worldwide On the other hand excess iron is potentially toxic due to its redox reactivity Iron toxicity is illustrated in pathologies of iron overload disorders such as hereditary hemochromatosis or iron loading anemias Deregulation of iron metabolism is also observed in prevalent metabolic cardiovascular or neurological disorders Our knowledge of iron metabolism has dramatically increased during the last 30 40 years with the discovery of elegant iron homeostatic networks that operate at the cellular and systemic levels These include the IRE IRP regulatory system and the hepcidin ferroportin axis The iron hormone hepcidin has emerged as a master regulator of systemic iron traffic and as a pharmacological target for iron related disorders The book offers a comprehensive overview of the rapidly growing bioiron field and aims to attract the attention of students basic scientists and clinicians
