Protocol Test Systems Vii:

Protocol Test Systems VIII Ana Cavalli, Stan Budkowski, 2013-03-09 IWPTS 95 International Workshop on Protocol Test Systems is being held this year at NT Institut National des Telecommunications Evry France from 4 to 6 September 1995 IWPTS 95 is the eighth of a series of annual meetings sponsored by the IFIP Working Group WG6.1 dedicated to Architecture and Protocols for Computer Networks. The seven previous workshops were held in Vancouver Canada 1988 Berlin Germany 1989 Mclean USA 1990 Leidschendam The Netherlands 1991 Montreal Canada 1992 Pau France 1993 and Tokyo Japan 1994. The workshop is a meeting place where both research and industry theory and practice come together. By bringing both researchers and practitioners together IWPTS opens up the communication between these groups. This helps keep the research vital and improves the state of the practitioner's art. Forty-eight papers have been submitted to IWPTS 95 and all of them have been reviewed by the members of the Program Committee and additional reviewers. The completed reviewers list is included in this Proceedings. Based on these reviews the Program Committee selected 26 for oral presentation and 4 to be presented as posters. Two specially invited papers complete the Workshop Program which is composed of ten sessions: Testing Methods Session 1 Test Environments Session 2 Theoretical Framework Session 3 Algorithms and Languages Session 4 Test Generation 1 Session 5 Testability Session 6 Test Generation 2 Session 7 Industrial Applications Session 8 Distributed Testing and performance Session 9 and Test Management Session 10 *Protocol Specification, Testing and Verification XV* Piotr Dembinski, Marek Sredniawa, 2016-01-09 This volume presents the latest research worldwide on communications protocols emphasizing specification and compliance testing. It presents the complete proceedings of the fifteenth meeting on Protocol Specification Testing and Verification arranged by the International Federation for Information Processing. Testing of Communicating Systems Bernd Baumgarten, Heinz-Jürgen Burkhardt, Alfred Giessler, 2013-06-05 This volume contains the proceedings of the IFIP WG 6.1 International Workshop on Testing of Communicating Systems IWTCS 96 held in Darmstadt Germany on September 9 through 11 1996 continuing the IFIP WG 6.1 series of International Workshops on Protocol Test Systems IWPTS. In this series of working conferences held annually since 1988 many valuable contributions have been presented with an emphasis both on the OSI conformance testing methodology and framework as well as the standardization effort on formal methods in conformance testing. While there are still open issues and divergencies between theory and practice in these fields the scope of the series started expanding to related fields of growing practical relevance for example to testing with regard to the B-ISDN protocol reference model in particular ATM the ODP reference model and the Internet protocol suite as well as to interoperability testing and performance testing. To reflect the extended scope the program committee agreed on a new name for this series of working conferences to be applied the first time to the 1996 conference. However in order to emphasize the tradition of IWPTS the numbering of this series was continued such that IWTCS 96 is counted as the 9th International Workshop on Testing of Communicating Systems. As in the

years before the workshop aims at bringing together researchers and practitioners furthering the exchange of views and correlating the work of both sides

Feature Interactions in Telecommunications Systems, III Kong E. Cheng, Tadashi Ohta, 1995 In an information society heavily dependent on communications and distributed systems feature interactions are likely to become an even more important problem than they are today A particularly interesting issue given the current work on agents is whether feature interactions will be more likely in systems with many autonomous agents performing tasks The current demand for better and more convenient communications requires development of a variety of

new services as quickly as possible As the number of services becomes larger however feature interactions create incompatibilities between the various functions needed to implement them In developing telecommunication systems we now spend huge numbers of person hours on software modifications and testing whenever a new function is added Much of this time is spent on detecting and eliminating problems arising from feature interaction In the future as ever more services are offered feature interactions will become a major bottleneck in the development of software for telecommunications systems This book presents opinions on the technical problems involved in feature interactions and definitions of features and feature interactions
