A History of Modern Planetary Physics Stephen G. Brush, 1996-04-26 Where did we come from Before there was life there had to be something to live on a planet a solar system During the past 200 years astronomers and geologists have developed and tested several different theories about the origin of the solar system and the nature of the Earth Together the three volumes that make up A History of Modern Planetary Physics present a survey of these theories The early twentieth century saw the replacement of the Nebular Hypothesis with the Chamberlain Moulton theory that the solar system resulted from the encounter of the Sun with a passing star Fruitful Encounters follows the eventual refutation of the encounter theory and the subsequent revival of a modernised Nebular Hypothesis Professor Brush also discusses the role of findings from the Apollo space programme especially the analysis of lunar samples culminating in the establishment in the 1980s of the giant impact theory of the Moon s origin Literature 1983, Part 1 S. has generated much excitement in the scientific community with preparations already afoot for an International Comet Watch and a comet launch by the European Space Community the Japanese and Soviet Space Scientists The meeting held at the University of Maryland in October 1980 was primarily stimulated by the preparations for further study of this comet and by one of the most important unanswered questions related to comets namely whether they may have made a contribution to the origin of life on earth Our understanding of the role of comets in the origin of life must necessarily come from our studies of the astronomy and the chemistry of comets Some clues to the processes which led to the formation of organic molecules and eventually to the appearance of life have come from these studies of comets perhaps the most ancient of all objects in our solar system Whether there is however a biology of comets still remains to be seen although some claims have been made that perhaps comets might themselves provide an environment for even the beginnings of life Scientists with the latest available information on comets and differing opinions as to the role of comets in the origin of life attended this symposium The formal papers presented are now being made available to the students of chemical evolution within the pages of this volume
