Climate Change and Philosophy presents ten original essays by an international team of expert contributors exploring the important contribution philosophical inquiry can make to contemporary debates to do with climate change and the global environment Examining this hugely topical issue through the lens of environmental philosophy political theory philosophy of technology philosophy of education and feminist theory these essays interrogate some of the presumptions that inform modernity and our interaction with natural processes The book asks fundamental questions about human nature and more importantly the concept of nature itself The conceptual frameworks presented here contribute to an understanding of the processes of change of social transformation and the means of adapting to the constraints that problems such as climate change pose The book proposes a way of beginning the important task of rethinking the relationship between humanity and the natural environment Through enquiry into the basic philosophical principles that inform modern society each author asserts that reflection informs change and that change is both required and possible in the context of the environmental crisis facing us today

and this book will be a valuable reference to the humanist in architects planners and social scientists whether they are students professionals or amateurs It will appeal to historians of the 20th century and to psychoanalysts and architects who are interested in how their respective discourses interdigitate with each other and with other discourses *The Spirit of Sustainability* Willis Jenkins, Whitney Bauman, 2009-11-01 The Spirit of Sustainability helps readers navigate the moral worlds and ethical concepts and social and religious practices related to sustainability In collaboration with the Forum on Religion and Ecology an established network of leading scholars it explores a wide range of topics and perspectives from the promise and problems of approaching sustainability through global and indigenous religions to major theories in philosophy and environmental ethics and professional practices and social movements This volume presents the various goals of sustainability ecological integrity economic health human dignity fairness to the future and social justice and provides a framework for reasoning through many interrelated environmental challenges for both current and future generations

Fairness in International Climate Change Law and Policy Friedrich Soltau, 2009-09-14 This work analyses fairness dimensions of the climate regime A central issue in international law and policy is how countries of the world should allocate the burden of addressing global climate change With the link between human activities and climate

change clearly established and the first impacts of climate change being felt there is a renewed sense of urgency in addressing the problem. On the basis of an overview of science and the development of the climate regime this book seeks to identify the elements of a working consensus on fairness principles that could be used to solve the seemingly intractable problem of assigning responsibility for combating climate change. The book demonstrates how an analysis of fairness dimensions of climate change grounded in practical developments and illustrated with reference to the key issues can add value to our understanding of the options for international climate law and policy.
