**Experiencing the Impossible** Gustav Kuhn, 2019-03-12 This thought provoking tour through the science of magic will make you question what you know about your brain and your reality A psychologist and magician shows how the scientific study of magic reveals intriguing and often unsettling insights into the mysteries of the human mind What do we see when we watch a magician pull a rabbit out of a hat or read a person s mind We are captivated by an illusion we applaud the fact that we have been fooled Why do we enjoy experiencing what seems clearly impossible or at least beyond our powers of explanation In *Experiencing the Impossible* Gustav Kuhn examines the psychological processes that underpin our experience of magic Kuhn a psychologist and a magician reveals the intriguing and often unsettling insights into the human mind that the scientific study of magic provides Magic Kuhn explains creates a cognitive conflict between what we believe to be true for example a rabbit could not be in that hat and what we experience a rabbit has just come out of that hat Drawing on the latest psychological neurological and philosophical research he suggests that misdirection is at the heart of all magic tricks and he offers a scientific theory of misdirection He explores among other topics our propensity for magical thinking the malleability of our perceptual experiences forgetting and misremembering free will and mind control and how magic is applied outside entertainment the use of illusion in human computer interaction politics warfare and elsewhere We may be surprised to learn how little of the world we actually perceive how little we can trust what we see and remember and how little we are in charge of our thoughts and actions Exploring magic Kuhn illuminates the complex and almost magical mechanisms underlying our daily activities

**Consecrating Science** Lisa H. Sideris, 2017-08-15 In *Consecrating Science* Lisa Sideris offers a searing critique of The New Cosmology a complex network of overlapping movements that claim to bring together science and spirituality all in the name of saving our planet from impending ecological collapse Highly regarded in many academic circles these movements have been endorsed by numerous prominent scholars scientists historians and educators Their express goal popularized in numerous books films TED talks YouTube videos podcasts and even introductory courses at places like Harvard or Washington University is to instill in readers and audiences a profound sense of being at home in the universe thereby fostering environmentally responsible behavior Whether promoted as The New Story The Universe Story or The Epic of Evolution they all offer humanity a new sacred story a common creation myth for modern times and for all people the evolutionary unfolding of the universe from the Big Bang to the present Evolutionary science and

religious cosmology together at last But as Sideris shows however the New Cosmology actually underwrites a staggeringly anthropocentric vision of the world Instead of cultivating an ethic of respect for nature the project of consecrating science only increases human arrogance and indifference to nonhuman life Going back to the work of Rachel Carson and other naturalists the author shows how a sense of wonder rooted in the natural world and our own ethical impulses helps foster environmental attitudes and policies that protect our planet Provided by publishe
