Redesigning Life John Parrington, 2016-08-18 Since the birth of civilisation human beings have manipulated other life forms We have selectively bred plants and animals for thousands of years to maximise agricultural production and cater to our taste in pets The observation of the creation of artificial animal and plant variants was a key stimulant for Charles Darwin's theory of evolution The ability to directly engineer the genomes of organisms first became possible in the 1970s when the gene for human insulin was introduced into bacteria to produce this protein for diabetics At the same time mice were modified to produce human growth hormone and grew huge as a result But these were only our first tottering steps into the possibilities of genetic engineering In the past few years the pace of progress has accelerated enormously We can now cut and paste genes using molecular scissors with astonishing ease and the new technology of genome editing can be applied to practically any species of plants or animals Mutation chain reaction can be used to alter the genes of a population of pests such as flies as the modified creatures breed the mutation is spread through the population so that within a few generations the organism is almost completely altered At the same time scientists are also beginning to synthesize new organisms from scratch These new technologies hold much promise for improving lives Genome editing has already been used clinically to treat AIDS patients by genetically modifying their white blood cells to be resistant to HIV In agriculture genome editing could be used to engineer species with increased food output and the ability to thrive in challenging climates New bacterial forms may be used to generate energy But these powerful new techniques also raise important ethical dilemmas and potential dangers pressing issues that are already upon us given the speed of scientific

developments To what extent should parents be able to manipulate the genetics of their offspring and would designer babies be limited to the rich Can we effectively weigh up the risks from introducing synthetic lifeforms into complex ecosystems In this extensively revised paperback edition John Parrington explains the nature and possibilities of these new scientific developments which could usher in a brave new world We must rapidly come to understand its implications if we are to direct its huge potential to the good of humanity and the planet

An Appraisal of Challenges in the Sustainable Management of the Micro-tidal Barrier-built Estuaries and Lagoons in Sri Lanka, 2012

John A. Hobson John Cunningham Wood, Robert D. Wood, 2003

Societal Dynamics Frederick Betz, 2011-11-25 At both a micro information level and a macro societal level the concepts of knowledge and wisdom are complementary in both decisions and in social structures and institutions At the decision level knowledge is concerned with how to make a proper choice of means where best is measured as the efficiency toward achieving an end Wisdom is concerned with how to make a proper choice of ends that attain best values At a societal level knowledge is managed through science technology and innovation And while science technology is society s way to create new means with high efficiencies they reveal nothing about values Technology can be used for good or for evil to make the world into a garden or to destroy all life It is societal wisdom which should influence the choice of proper ends ends to make the world a garden How can society make progress in wisdom as well as knowledge Historically the disciplines of the physical sciences and biology have provided scientific foundations for societal knowledge But the social science disciplines of sociology economics political science have not provided a similar scientific foundation for societal wisdom To redress this gap Frederick Betz examines several cases in recent history that display a fundamental paradox between scientific technological achievement with devastating social effects i e historical events of ideological dictatorships in Russia Germany China and Yugoslavia He builds a new framework for applying social science perspectives to explain societal histories and social theory Emerging from this methodological and empirical investigation is a general topological theory of societal dynamics This

theory and methodology can be used to integrate history and social science toward establishing grounded principles of societal wisdom

Prophecy, Piety, and Profits Ayman Reda, 2017-12-26 This book examines in greater depth than the existing literature the history of Islamic economic thought. It seeks to introduce Islamic views to debates surrounding critical economic concepts such as scarcity, wealth, poverty, charity, usury, self-interest, rationality, and markets. It does so through a comparative analysis with the views of Judaic, Christian, and secular economic thought. Prophecy is meant to signify the theoretical dimension of religion, while piety represents its practical element; neither part is feasible without the other. Together, prophecy and piety inform the Islamic view of economic concepts and phenomena. This view seeks to adjust our approach to profits both in this world and the next and seeks to reexamine what is truly profitable and worthy of sacrifice.

Questioning the Utopian Springs of Market Economy Damien Cahill, Martijn Konings, Adam David Morton, 2020-12-17 Revisiting the magnetic poles of Karl Polanyi and Friedrich Hayek on the utopian springs of political economy, this book seeks to provide a compass for questioning the market economy of the twenty-first century. For Polanyi in *The Great Transformation*, the utopian springs of the dogma of liberalism existed within the extension of the market mechanism to the fictitious commodities of land, labour, and money. There was nothing natural about laissez-faire. The progress of the utopia of a self-regulating market was backed by the state and checked by a double movement which attempted to subordinate the laws of the market to the substance of human society through principles of self-protection, legislative intervention, and regulation. For Hayek in *The Road to Serfdom*, the utopia of freedom was threatened by the abandonment of individualism and classical liberalism. The tyranny of government interventionism led to the loss of freedom, the creation of an oppressive society, and the despotism of dictatorship that led to the serfdom of the individual. Economic planning in the form of socialism and fascism had commonalities that stifled individual freedom. Against the power of the state, the guiding principle of the policy of freedom for the individual was advocated. Taking these different aspects of market economy as its point of departure, this book promises to deliver a set of essays by leading commentators on twenty-first century political economy debates relevant to the present conjuncture of neoliberalism. The chapters in this book were originally published in a special issue of the journal *Globalizations*.

Living Walden Two Hilke Kuhlman, 2010-10-01 In Walden Two behavioral psychologist B F Skinner describes one of the most controversial fictional utopias of the twentieth century During the 1960s and 70s this novel went on to inspire approximately three dozen actual communities which are entertainingly examined in Hilke Kuhlmann's *Living Walden Two* In the novel behavioral engineers use positive reinforcement in organizing and gently guiding all aspects of society leaving the rest of the citizens free to lead happy and carefree lives Among the real world communities a recurrent problem in moving past the planning stages was the nearly ubiquitous desire among members to be gentle guides coupled with strong resistance to being guided In an insightful and often hilarious narrative Hilke Kuhlmann explores the dynamics of the communities with an in depth examination of the two surviving Skinnerian communities Comunidad Los Horcones in Mexico and Twin Oaks in Virginia Drawing on extensive interviews with the founders and key players in the Walden Two communities Kuhlmann redefines the criteria for their success by focusing on the tension between utopian blueprints for a new society and communal experiments actual effects on individual lives
