Regenerating The Cities:

Creating Regenerative Cities Herbert Girardet, 2014-09-19 Large modern cities have effectively declared their independence from nature. But while they take up only three percent of the world's land surface, their ecological footprints actually cover the entire globe. Humanity is building an urban future, yet urban resource use is threatening the future of humanity and the natural world. To meet the aspirations of city people in both developing and developed countries, bold new initiatives are needed. Modern cities are an astonishing human achievement. As centres of innovation, they are humanity's cultural playgrounds. Their communication and transport systems have developed a global reach. They are attractive to investors because they can offer a vast variety of services at comparatively low per capita costs. But are they viable as ecological systems? The planning of new cities, as well as the retrofit of existing cities, needs to undergo a profound paradigm shift. Mere sustainable development is not enough. To be compatible with natural systems, cities need to move away from linear systems of resource use and learn to operate as closed-loop circular systems. To ensure their long-term future, they need to develop an environmentally enhancing restorative relationship between themselves and the natural systems on which they still depend. *Creating Regenerative Cities* is a concise, solution-oriented manual for creating regenerative urbanisation. A wide range of technical management and policy solutions already exist, but implementation has been too slow and too little, in large part because the kinds of holistic approaches needed are still unfamiliar to fragmented and process-driven urban policy making and governance. Herbert Girardet's 30 years' experience as an ecologist, thinker, film maker, and consultant working around the world has created this unique combination of tried and tested best practices and policies, which outlines the fundamental shifts needed in the way we think about our cities.

Regenerating Cities Maria Elena Zingoni de Baro, 2022-01-18 This book sets out the discussion on how cities can contribute solutions to some of the challenges the urbanised world is facing, such as the pressure of growing populations, mitigation of effects of, and adaptation to, globally changing environmental climate and public health conditions. Presenting a detailed explanation of the causes behind the current state of modern cities, the book advocates for a paradigm shift to improve the quality of life of ever-increasing urban inhabitants whilst nourishing the natural systems that sustain human and non-human life in the planet. Recognising the precious role that nature plays in the functioning of cities, it delves into the study of biophilic design and regenerative development. The book argues that these social-ecological design approaches can act as catalysts to develop conditions in urban settings that are beneficial for natural and human systems to thrive and flourish, both in ecosystem services and social-cultural systems. This is particularly relevant for the design of new quality precincts or the regeneration of degraded urban spaces to promote health, wellbeing, and urban resilience. A framework is proposed to guide the process of thinking about designing and building healthier, more liveable and resilient urban environments that raise the quality of life in cities. The method can be used by researchers, practitioners, urban designers, urban planners, architects, and landscape architects.

interested in developing their work within a social ecological perspective It can also be used by local governments and agencies to underpin policy making and by educational institutions to prepare graduates with necessary skills to respond to current and future built environment challenges Regenerating the Cities Michael Parkinson, Bernard Foley, Dennis R.
