Regional Economic Modeling A Systematic Approach To Forecasting And Policy Analysis:

Regional Economic Modeling: A Systematic Approach to Economic Forecasting and Policy Analysis G.I.

Treyz,2013-11-11 Regional economic models are the key to predicting the effects of transportation economic development energy fiscal and environmental policies Despite this the principal regional economic policy analysis model used throughout the United States by government agencies universities and the private sector has not been presented in a book until now The approach to building understanding and using regional models presented in Regional Economic Models A Systematic Approach to Forecasting and Policy Analysis is progressive It begins with the simplest possible models and concludes with a full presentation of the leading model used by policy makers today The full details are presented along with facilitating software which is made available so that the reader can build a prototype model for any state or country and can perform policy simulations with full operational models for a sample area Policy studies are discussed that have been carried out with the model as well as the range of ways in which policies can be tested through policy simulations The necessary background is developed for understanding the ways in which models can be used to improve the basis upon which policies are evaluated as well as the sensitivity of the predicted effects to the model chosen for the analysis The presentation is multifaceted and includes equations diagrams and numerical examples The professional literature is integrated with introductory materials to produce the first comprehensive book on regional modeling that extends from economic base models to modeling advances that are currently being published in economic journals Regional Economic Modeling George Treyz,1933 Regional Modeling George Treyz,1990 Environmental Policy Analysis and Practice Michael R Greenberg,2008-03-13 Pressing environmental challenges are frequently surrounded with stakeholders on all sides of the issues Opinions expressed by government agencies the private sector special interests nonprofit communities and the media among others can quickly cloud the dialogue leaving one to wonder how policy decisions actually come about In Environmental Policy Analysis and Practice Michael R Greenberg cuts through the complicated layers of bureaucracy science and the public interest to show how all policy considerations can be broken down according to six specific factors 1 the reaction of elected government officials 2 the reactions of the public and special interests 3 knowledge developed by scientists and engineers 4 economics 5 ethical imperatives and 6 time pressure to make a decision The book is organized into two parts with the first part defining and illustrating each one of these criteria Greenberg draws on examples such as nuclear power pesticides brownfield redevelopment gasoline additives and environmental cancer but focuses on how these subjects can be analyzed rather than exclusively on the issues themselves Part two goes on to describe a set of over twenty tools that are used widely in policy analysis including risk assessment environmental impact analysis public opinion surveys cost benefit analysis and others These tools are described and then illustrated with examples from part one Weaving together an impressive combination of practical advice and engaging first person accounts from government officials administrators and leaders in the fields of

public health and medicine this clearly written volume is poised to become a leading text in environmental policy

China - Central Asia's Regiocentric Strategies of Integration and Geoeconomics Perspectives Eric Balan, The balance of economic and political powers is indeed changing Newer powers like China are emerging through shared

economic partnerships and this creates opportunities to grow and brings about new challenges in the stability growth and security of regional and global economy The economic synergy of the Belt and Road is evolving and it is resonating and impacting geopolitics geoeconomics and geostrategies Central Asia is the new frontier and it has the capacity to become a major global contributor A heightened sense of continuum economic realization through collaboration is capable of bringing and showing prosperity and progress to the larger region The work made in this research is in support of the Belt and Road initiatives however the focus of the research was to assess economic readiness of Central Asia China is ready with its resources its finances and its manpower to take on the BRI challenges towards achieving national prosperity and solidarity glory for China For Central Asia the BRI is an important feat that it needs to secure for its own development course but how ready are they This research study is the gate that opens up to new and more of such works for the next 30 years

Considering Cumulative Effects Under the National Environmental Policy Act Council on Environmental Quality (U.S.),1997 **A Practitioner's Guide to State and Local Population Projections** Stanley K. Smith,Jeff Tayman,David A. Swanson,2013-12-16 This book focuses on the methodology and analysis of state and local population projections It describes the most commonly used data sources and application techniques for four types of projection methods cohort component trend extrapolation structural models and microsimulation It covers the components of population growth sources of data the formation of assumptions the development of evaluation criteria and the determinants of forecast accuracy It considers the strengths and weaknesses of various projection methods and pays special attention to the unique problems that characterize small area projections The authors provide practical guidance to demographers planners market analysts and others called on to construct state and local population projections They use many examples and illustrations and present suggestions for dealing with special populations unique circumstances and inadequate or unreliable data They describe techniques for controlling one set of projections to another for interpolating between time points for sub dividing age groups and for constructing projections of population related variables e g school enrollment households They discuss the role of judgment and the importance of the political context in which projections are made They emphasize the utility of projections or their usefulness for decision making in a world of competing demands and limited resources This comprehensive book will provide readers with an understanding not only of the mechanics of the most commonly used population projection methods but also of the many complex issues affecting their construction interpretation evaluation and use **Handbook of Health**

Critical Evaluations of Economic Development Policies Laura Ann Reese, David Fasenfest, 2004 This ground breaking text offers alternative models for critical evaluation of the values behind and the success of local level economic development policies The values that shape present day economic development policies are often not plainly expressed Critical Evaluations of Economic Development Policies shows how the use of nontraditional methods of evaluation can foreground the values that inform public policy and determine whether or not those values and the policies that arise from them are in the best interests of the community that adopts them The methodology defined in this book not only provides means for judging the success or failure of economic development programs but also offers tactics for judging how well policies address needs according to a community's own value system The essays in Critical Evaluations of Economic Development Policies establish critical models illustrate how such models may be applied and show how evaluations of a single program made from the perspectives of differing value systems lead to different conclusions about the success or failure of the program In doing so these essays demonstrate the crucial importance of continuing dialogue between those who make policies and those who assess them This dynamic collection proposes to stimulate discussion among scholars developers and urban administrators to build awareness of the ways to foster completely informed policies and evaluate their outcomes

Explaining Risk Analysis Michael R Greenberg, 2016-09-13 Risk analysis is not a narrowly defined set of applications Rather it is widely used to assess and manage a plethora of hazards that threaten dire implications However too few people actually understand what risk analysis can help us accomplish and even among experts knowledge is often limited to one or two applications Explaining Risk Analysis frames risk analysis as a holistic planning process aimed at making better risk informed decisions and emphasizing the connections between the parts This framework requires an understanding of basic terms including explanations of why there is no universal agreement about what risk means much less risk assessment risk management and risk analysis Drawing on a wide range of case studies the book illustrates the ways in which risk analysis can help lead to better decisions in a variety of scenarios including the destruction of chemical weapons management of nuclear waste and the response to passenger rail threats The book demonstrates how the risk analysis process and the data models and processes used in risk analysis will clarify rather than obfuscate decision makers options This book will be of great interest to students and scholars of risk assessment risk management public health environmental science environmental economics and environmental psychology

State and Local Population Projections Stanley K. Smith, Jeff Tayman, David A. Swanson, 2005-12-21 The initial plans for this book sprang from a late afternoon conversation in a hotel bar All three authors were attending the 1996 meeting of the Population Association of America in New Orleans While nursing

drinks and expounding on a variety of topics we began talking about our current research projects. It so happened that all three of us had been entertaining the notion of writing a book on state and local population projections. Recognizing the enormity of the project for a single author we quickly decided to collaborate. Had we not decided to work together it is unlikely that this book ever would have been written. The last comprehensive treatment of state and local population projections was Don Pittenger's excellent work *Projecting State and Local Populations* 1976. Many changes affecting the production of population projections have occurred since that time. Technological changes have led to vast increases in computing power, new data sources, the development of GIS, and the creation of the Internet. The procedures for applying a number of projection methods have changed considerably and several completely new methods have been developed.
