Regional Hydrological Response To Climate Change:

Regional Hydrological Response to Climate Change J.A. Jones, Changming Liu, Ming-Ko Woo, Hsiang-Te Kung, 2012-12-06 This volume arises from the work of the International Geographical Union Working Group on Regional Hydrological Response to Climate Change and Global Warming under the chairmanship of Professor Changming Liu 1992 96 The book consists mostly of peer reviewed papers delivered at the Working Group's first three scientific meetings held in Washington D C 1992 Lhasa Tibet 1993 and Moscow 1995 These have been supplemented by a few additional chapters that have been specifically commissioned in order to give a well rounded coverage of the global and scientific aspects of the topic As editors we have sought to balance state of the art reviews of methodology and regional research with detailed studies of specific countries and river basins In the spirit of the IGU we have devoted particular effort to encouraging contributions from scientists in the non English speaking world These chapters provide valuable evidence of recent climatic change and predictions of future hydrological impacts from parts of the world where little detailed work has been conducted hitherto They provide much valuable information that is new and interesting to an international audience and is otherwise very difficult or impossible to acquire It is hoped that the present volume will be not only a record of current achievements but also a stimulus to further hydrological research as the detail and spatial resolution of Global Climate Models improves One notable aspect that emerges from a number of the contributions is that many though by no means all recent hydrological trends are in line with global warming predictions *Regional Hydrological Impacts of Climatic Change: Impact assessment and decision making* Thorsten Wagener, Stewart W. Franks, 2005 Subsurface Hydrological Responses to Land Cover and Land Use Changes Makoto Taniguchi, 2012-12-06 Since human beings first appeared on the earth we have changed land cover and land use for our own purposes such as conveniences and high productivity As a result of the land cover and land use changes many serious environmental problems occur on the earth Studying meteorological and hydrological effects of vegetation and land cover use changes helps us to understand the environmental changes and problems happening near the earth surface because the vegetation distributes the solar energy and water on the earth surface into atmosphere and geosphere Subsurface hydrological responses to land cover and land use changes have drawn only regional environmental concerns although global change caused by biosphere change has been studied in various scientific fields The changes in land cover and land use alter water solute and heat cycles in basins and elements of those balances including evapotranspiration groundwater recharge rate discharge rates into rivers or ocean and soil moisture content which are directly or indirectly related to the global environmental issues Therefore the changes in biosphere may substantially alter the subsurface hydrological system For instance increased groundwater recharge rates following clearing forest into grasses might be one consequence resulting in rising water tables and salinization **Global Climate Change and Freshwater Ecosystems** Penelope Firth, Stuart G. Fisher, 2012-12-06 Global climate change is a certainty The Earth's climate has never

remained static for long and the prospect for human accelerated climate change in the near future appears likely Freshwater systems are intimately connected to climate in several ways they may influence global atmospheric processes affecting climate they may be sensitive early indicators of climate change because they integrate the atmospheric and terrestrial events occurring in their catchments and of course they will be affected by climate change An improved predictive understanding of environmental effects on pattern and process in freshwater ecosystems will be invaluable as a baseline upon which to build sound protection and management policies for fresh waters This book represents an early step towards this improved understanding The contributors accepted the challenge to assume global warming of 2.5°C in the next century They then explored the implications of this scenario on various freshwater ecosystems and processes To provide a broader perspective Firth and Fisher included several chapters which do not deal expressly with freshwater ecosystems but rather discuss climate change in terms of causes and mechanisms implications for water resources and the use of remote sensing as a tool for expanding studies from local to global scale

Floods Dennis J. Parker, 2014-08-27 Floods occur in most parts of the world and range from being welcomed annual occurrences to natural disasters which have countless physical and societal impacts *Floods* presents the most comprehensive collection to date of new research providing a rich body of theory and experience and drawing together contributions from over fifty leading international researchers in the field An extensive range of case studies covering major floods and regions prone to flooding worldwide are included

Global Hydrology J. A. A. Jones, 2014-06-03 *Global Hydrology* illustrates in detail the growing importance of understanding hydrological processes and pathways as a means of effective and safe management of water resources It describes current management practices and past environmental impact It analyses the options for improving water supply and protecting the environment emphasizing the need for international collaboration in a changing societal and environmental context

Inland Flood Hazards Ellen E. Wohl, 2000-07-03 This edited volume was originally published in 2000 and presents a comprehensive interdisciplinary review of issues related to inland flood hazards It addresses physical controls on flooding flood processes and effects and responses to flooding from the perspective of human aquatic and riparian communities Individual chapter authors are recognized experts in their fields who draw on examples and case studies of inland flood hazards from around the world This volume is unusual among treatments of flood hazards in that it addresses how the non occurrence of floods in association with flow regulation and other human manipulation of river systems may create hazards for aquatic and riparian communities This book will be a valuable resource for everyone associated with inland flood hazards professionals in government and industry and researchers and graduate students in civil engineering geography geology hydrology hydraulics and ecology

Handbook of Engineering Hydrology (Three-Volume Set) Saeid Eslamian, 2018-10-03 While most books examine only the classical aspects of hydrology this three volume set covers multiple aspects of hydrology and includes contributions from experts from more than 30 countries It examines new approaches addresses growing concerns

about hydrological and ecological connectivity and considers the worldwide impact of climate change **Thirsty Planet** Constance Elizabeth Hunt, 2013-07-18 By the year 2025 nearly 2 billion people will live in regions experiencing absolute water scarcity In the face of this emerging crisis how should the planet's water be used and managed Current international policy sees nature competing with human uses of water Hunt takes issue with this perspective She suggests that nature is the source of water and only by making the conservation of nature an absolute priority will we have the water we need for human use in future It is essential therefore to manage water in ways that maintain the water cycle and the ecosystems that support it This book looks at the complexity of the problem It provides a wide array of ideas information case studies and ecological knowledge often from remote corners of the developing world that could provide an alternative vision for water use and management at this critical time Essential and compelling reading for students on courses related to water resource management and development water managers and decision makers and non specialists with an interest in global water issues Introduction to Aquifer Analysis Michael Kasenow, 1997 The Human Impact on the Natural Environment Andrew S. Goudie, 2013-04-25 The new edition of this classic student text provides an up to date and comprehensive view of the major environmental issues facing the world today and is an essential introduction to the past present and future impact of humans on Earth Explores the impact of humans upon vegetation animals soils water landforms and the atmosphere Updated extensively with many new figures and up to date statistics Four completely new chapters explore the ways in which global climate change may have an impact on Earth in the future A new design makes the text even more accessible and easy to use Visit www.blackwellpublishing.com/humanimpact to access the artwork from the book **Federal Register**, 1995-02-06 *Impacts of Climate Change and Climate Variability on Hydrological Regimes* Jan C. van Dam, 2003-10-16 Examines the implications of possible climate changes and variability on both global and regional water resources Earth System Responses to Global Change Harold A. Mooney, Eduardo R. Fuentes, Barbara I. Kronberg, 1993-10-06 This book examines the differences and similarities in the earth system components the ocean atmosphere and the land between western portions of the northern and southern Western Hemispheres past present and projected The book carefully examines the physical and biological patterns and responses of given biomes or ecological communities in the two regions Special emphasis is placed on the relationship of physical and biotic systems to biogeochemistry and the evolving biota patterns of land margins and surfaces The text concludes with an assessment of the direct impact on humans on these biomes giving full consideration to the land use drivers of global change Integrated view of earth system processes on the west coasts of North and South America Environmental Sustainability in the Mediterranean Region Carla Sofia Santos Ferreira, Georgia Destouni, Zahra Kalantari, 2024-09-04 The book provides a cross sectoral assessment of the most relevant environmental challenges in the Mediterranean region including land and water degradation water and food security and solution opportunities for these It also discusses main change drivers such as changes in climate land use population demographics

and technology Additionally the book explores improved management participatory planning and nature based strategies and measures for meeting the key environmental challenges e g restoring degraded areas and improving land management in different land uses e g forest coastal and urban areas Finally the book addresses needs and opportunities to improve governance and partnerships for assuring sustainable development in the Mediterranean region Climate Change 2014 - Impacts, Adaptation and Vulnerability: Part B: Regional Aspects: Volume 2, Regional Aspects Intergovernmental Panel on Climate Change (IPCC),2014-12-29 This latest Fifth Assessment Report of the Intergovernmental Panel on Climate Change IPCC will again form the standard reference for all those concerned with climate change and its consequences including students researchers and policy makers in environmental science meteorology climatology biology ecology atmospheric chemistry and environmental policy *Climate Change 2021 - The Physical Science Basis* Intergovernmental Panel on Climate Change (IPCC),2023-07-26 The Working Group I contribution to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change IPCC provides a comprehensive assessment of the physical science basis of climate change It considers in situ and remote observations paleoclimate information understanding of climate drivers and physical chemical and biological processes and feedbacks global and regional climate modelling advances in methods of analyses and insights from climate services It assesses the current state of the climate human influence on climate in all regions future climate change including sea level rise global warming effects including extremes climate information for risk assessment and regional adaptation limiting climate change by reaching net zero carbon dioxide emissions and reducing other greenhouse gas emissions and benefits for air quality The report serves policymakers decision makers stakeholders and all interested parties with the latest policy relevant information on climate change Available as Open Access on Cambridge Core *Climate Change 2014 - Impacts, Adaptation and Vulnerability: Regional Aspects* Christopher B.
