Modern Approaches to Endometriosis Eric J. Thomas,J. Rock,2012-12-06 Endometriosis provides a unique clinical and
scientific challenge It is being diagnosed with increasing frequency and yet we are unsure of the significance of this in many
patients Its appearance varies from a tiny focus of disease to a potentially destructive phenomenon We are still unsure of the
relative value of medical or surgical treatment The pathogenesis and control of the cellular function of the disease provide
many scientific problems The presence of a comparative normal epithelium namely endometrium provides a unique research
opportunity It is probable that only through basic science research will we be able to solve the clinical dilemmas that
endometriosis presents We felt that it was important to create a book that explored the important scientific and clinical
problems We therefore invited acknowledged experts from both Europe and the United States of America to review their
fields The purpose of these reviews is not only to provide a resource for clinicians and scientists but also to stimulate thought
and new ideas for research and treatment To fulfil that aim we have asked that the authors be more speculative than normal
for a volume such as this We thank them for responding to their task so well and hope that you will feel as stimulated by their
efforts as we have been *Gynaecology: Prepare for the MRCOG E-book* Philip N Baker,Alec S. McEwan,Sabaratham

The Woman Patient Malkah Notman,2013-11-11 This volume presents the knowledge views and experiences of ex perts in the fields of health care that are particularly important to women Not all of the authors agree on all of the issues but all share the same concerns about women s health and recognize the impor tance of providing information to enable women to become active par ticipants in the health care partnership The idea for the book evolved from our own work in the field of women s health care The positive responses we received to several papers and presentations based on our experiences and addressed to patients physicians and other health care professionals indicated that there is a growing need for open discussion of women s health care issues as well as a need for developing and implementing new and better ways of dealing with these issues We were further motivated by the repeated failure of the health care community to integrate new insights and information that frequently contradict older established beliefs and practices into current health planning education and practice
